

ABSTRACT

Provided is a method of producing CD106-positive and/or CD90-positive fibroblasts. Also provided is a cell population of G-CSF-positive fibroblasts. The method of producing CD106-positive and/or CD90-positive fibroblasts include the
5 step of culturing fibroblasts in the presence of at least one selected from the group consisting of TNF- α and IL-4 to increase the number of CD106-positive and/or CD90-positive fibroblasts.
