

**CANOPY APPARATUS, CLOTHES HANGING ASSEMBLY AND SYSTEM
INCLUDING THE CANOPY APPARATUS AND THE CLOTHES HANGING
ASSEMBLY**

Abstract

According to various embodiments, there is provided a canopy apparatus for covering over a clothes drying pole suspended across an outdoor. The canopy sheet may include a pair of parallel first and second sleeves extending along a surface of the canopy sheet in a direction extending perpendicularly between opposite first and second edges of the canopy sheet. The canopy sheet may further include a first and second canopy-support-poles respectively insertable through the pair of parallel first and second sleeves to support the canopy sheet in a manner so as to spread out or fold a cover section of the canopy sheet by moving the first and second canopy-support-poles laterally apart or together. According to various embodiments, there is also provided a clothes hanging assembly, and a rain-proof clothes drying system which includes the canopy apparatus and the clothes hanging assembly.
