

## **Mobile Story Books Display Sheet/Unit**

The present method of displaying bulk-borrowing story books in classrooms is mostly by putting them on bookshelves whereby students can only see the spines of story books, or on tables or in boxes whereby story books are stacked up. As such, students have difficulty selecting the story books and the story books are not able to arouse their interest.

The new invention is a piece of flat sheet made of canvas, polyester and plastic. It is mobile, handy, light and comes in different colours and sizes for putting eg. 4, 6, 9, 12, 16, 20 story books. Story books are placed flat in plastic holders, which are attached to a base made of canvas and polyester. This method of displaying enhances students' ability to read the titles, authors and illustrators and see the pictures on the front cover. This makes it easy for students to select books and it is appealing and inviting to students; one effective way to boost students' interest and reading rate.

### **Advantages:**

- Enhance teaching and learning for teachers and students respectively
- Help teachers and students keep track of the story books.
- Help parents and children with above benefits and can create a library corner when used at home.
- Suitable for use in classrooms, libraries, homes, tuition centres, offices, etc.
- Suitable for displaying story books, periodicals, magazines, word cards and other documents.
- Effective for displaying students' Composition Writings with A4-sized holders to save notice board space
- It can be folded and kept when not in use.
- Easy to wipe and maintain
- Heavy duty - materials used are canvas cum polyester and plastic, making it durable.
- Mobile - it can be pushed without effort from one place to another when hung to a stand with rollers or take it down and put it up when hung against walls
- Can be mounted to walls.
- Saves space
- Enhance students' reading rate
- Beautify classrooms' reading corners
- In line with Love Nature, Save Earth

**Claims against:**

- pattern
- shapes
- sizes
- usage
- materials used
- market audience
- target audience
- place of usage
