

TRANSMISSION METHOD, TERMINAL, NODE, DEVICE, AND MEDIUM

ABSTRACT

The present disclosure relates to the field of communications, and provides a transmission method, a terminal, a node, a device, and a medium. The transmission method comprises: receiving configuration information sent by a first network node or a second network node; and sending a first message to the second network node on the basis of the configuration information, wherein the configuration information comprises a configuration of the first message, and the first message is used for waking up the second network node.
