(54) Title: METHOD FOR OUTPUT LAYER SET FOR MULTILAYERED VIDEO STREAM

(57) Abstract: Systems and methods for coding and decoding are provided. A method includes receiving a coded video stream including a parameter set and video data partitioned into a plurality of layers; deriving, based on the parameter set, at least one first syntax element that specifies at least one first layer, from among the plurality of layers, to be outputted in an output layer set, and at least one second syntax element that indicates profile-tier-level information of the output layer set; and decoding, based on information derived from the parameter set, a portion of the video data of the coded video stream that corresponds to the output layer set.
