

A GAME SYSTEM FOR ACCUMULATING SYMBOLS TO INCREASE REWARD POINTS

Abstract

The invention provides a game system which provides a slot
5 game. The slot game starts a reward game after satisfying an
activation event, and the reward game comprises at least one free
round played in sequence. In each free round, a game result
generating unit generates a plurality of group symbols. If a control
unit determines that any one of the group symbols is a designated
10 pattern with an associated point, a display position where the
designated pattern kept displaying the designated pattern in the
reward game; if the control unit determines that any one of the group
symbols is a linking symbol with a predetermined rule, the linking
symbol is associated with the designated pattern kept displaying in
15 the reward game, and according to the predetermined rule, the
associated point of the designated pattern associated with the linking
symbol is changed.
