(54) Title: METHOD AND SYSTEM FOR CONTROLLING INFORMATION ACCESS FROM A WEBSITE VIA WEB OR WAP ACCESS

(57) Abstract: The present invention provides a computer method and system for controlling information access of information from a personal or enterprise website, via web or wap access. The client system or a viewer might have an identifier that identifies him as subscriber, or alternatively the client may be grouped as default public group. When a subscriber or client requests for a certain page in the website, the server will map the identifier or Access ID of the viewer or subscriber, and further determine the Access Control Group the subscriber belongs to. Based on the Access Control Group and origin of access (e.g. web or Wap), the website information or content may then be rendered and displayed accordingly.
