

STAKE SHARING PROCESSING METHOD AND APPARATUS

ABSTRACT

Some embodiments of this specification provide a stake sharing processing method and apparatus, where the stake sharing processing method includes: obtaining a sharing request of a sharing user for sharing a stake resource with at least one shared user; performing credibility verification on the at least one shared user based on the sharing request, to obtain a user set of a target user passing the verification; determining whether a resource parameter of the stake resource meets a corresponding sharing condition; and if the resource parameter of the stake resource meets the corresponding sharing condition, adding the target user to a stake relationship between the sharing user and the stake resource, so that the target user obtains a resource permission of the stake resource.
