(54) Title: EYEGLASS WITH ENHANCED BALLISTIC RESISTANCE

FIG. 1

(57) Abstract: An eyeglass is provided that can comprise a frame, a lens, and at least one retention component that can secure the lens relative to the frame. The frame can be configured to support at least one lens in a field of view of a wearer. The frame can include a first ear stem and a second ear stem that allows the frame to be worn on the wearer's head. The at least one retention component can be supported by the frame and/or the lens and can be movable or fixed relative to the frame and/or the lens. The retention component can engage an engagement portion of the frame and/or the lens for preventing the lens from separating from the frame in response to a ballistic event.
