

WASHING MACHINE

ABSTRACT

5 A washing machine includes a housing, a water tub supported in the housing, a drum rotatably provided in the water tub, detergent tank (117) having an opening in an upper portion and storing liquid, detergent tank lid (119) configured to open and close the opening, and an automatic liquid agent injection device configured to supply a liquid agent inside detergent tank (117)
10 into the water tub. Detergent tank (117) includes first longitudinal rib (138a), second longitudinal rib (138b), and third longitudinal rib (138c) formed on an inner wall surface and extending in a vertical direction. This can provide a washing machine that allows easy grasping of a remaining amount of liquid agent in detergent tank (117).
