— with international search report (Art. 21(3))

(54) **Title:** METHOD AND SYSTEM FOR AN IMPROVED RESERVATION SYSTEM OPTIMIZING REPEATED SEARCH REQUESTS

(57) **Abstract:** The method according to a preferred embodiment of the present invention allows an improved travel request service to end-users who request proposals for a trip from a Global Distribution System (GDS). This uses a new travel request which comprises a wider range for each search parameter than previous travel requests from the prior art. The new travel request includes many different ranges of parameters in the same travel request whereas the prior art travel request has to be repeated for each different requested value for each search parameter. The method according to a preferred embodiment of the present invention provides a combination of two modules, a master module and a worker module, to carry out the improved travel request service.
