

ABSTRACT

Artillery ammunitions loading system

5 Artillery ammunition loading system (100), configured
to load ammunitions comprising at least one projectile
in a cannon or a howitzer (11); said ammunition loading
system is characterized in that it comprises a first
mobile means (102a) for loading projectiles and a
10 second mobile means (102b) for loading propelling
charges, which alternatively and at least partially
automatically feed said cannon or howitzer (11) for
each firing cycle.
