

ABSTRACT

The present invention relates to a sulfonamide derivative, a preparation method therefor, and a medical use of a pharmaceutical composition containing the derivative. Specifically, the present invention relates to a sulfonamide derivative represented by general formula (AAI), a preparation method therefor, and a pharmaceutically acceptable salt thereof, as well as a use thereof as a therapeutic agent, particularly as a CTPS1 inhibitor, the definitions of the substituents in the general formula (AAI) being the same as the definitions in the description.
