AC Power Switching Module

Abstract

An AC power switching module comprising: AC current input and output means; switching means located between said input and output means for selectively blocking or passing said AC current; a switch controller arranged to provide an output signal to the switching means to control the state of the switching means; a primary control for setting the output of the switch controller; and a secondary control for setting the output of the switch controller, wherein said secondary control comprises a current-dependent circuit dependent on the AC current.
