ABSTRACT

[Problem] Provided is a light-colored binder composition capable of improving weather resistance, workability during construction, and durability while suppressing a tire-adhesion and peeling property.

[Solution] A light-colored binder composition contains a petroleum-based solvent extracted oil, a petroleum resin, a thermoplastic elastomer: 1.6 weight% or more and 2.8 weight% or less, an ethylene copolymer: 3.5 weight% or more and 6.0 weight% or less, and an FT wax: 0.4 weight% or more and 0.99 weight% or less.
