(54) Title: SURGICAL DRAPE AND SUCTION HEAD FOR WOUND TREATMENT (57) Abstract This invention relates to surgical drapes and in particular provides a drape and suction head combination for attaching the suction head to a wound area. The suction head comprises a planar flange portion and a tubular connector piece on a first face which communicates with an aperture extending to the second face. The second face is formed with projections which define flow channels for facilitating flow of liquids to the aperture.
