

TITLE OF INVENTION: HOLDER FOR ELECTRONIC PART HANDLER

ABSTRACT

Disclosed herein is a holder for an electronic part
5 handler. The holder including: a pair of gripping levers
configured to selectively grip and release an adapter; a
driving source configured to allow the pair of gripping levers
to selectively grip and release the adapter; a pair of movable
guiders configured to support an electronic part in the state
10 in which the adapter is opened by an opener, and to guide an
electronic part to a seating location in the process in which
the electronic part is seated on the adapter; a restoring
member configured to restore the pair of movable guiders to
their original locations when the pair of movable guiders are
15 moved by applying an external force to the pair of movable
guiders and then the external force is removed from the pair
of movable guiders; and an installation frame.
