

Abstract

To provide a support device capable of easily supporting a lower eyelid (eye bag) while being grasped with a hand. The present invention provides a T-shaped support for upwardly
5 supporting an eye bag of an eye, the support including a horizontal receiving part (1) to be brought into contact with the eye bag and a grip part (2) to be grasped, the grip part (2) being formed to hang from the center of the horizontal receiving part (1). The horizontal receiving part (1) is
10 formed in a crescent shape and has both ends each formed into a curve. Further, the horizontal receiving part (1) and the grip part (2) are each formed of a metal, and the horizontal receiving part (1) is coated with silicone resin.
