(54) Title: AN INSECT BARRIER PET BOWL ASSEMBLY

(57) Abstract: A bowl assembly (2) includes a bowl (4) which is suitable for holding various types of produce but which is intended for receiving food for a pet. The bowl assembly (2) is supported upon a tray (6). Four legs (8) are disposed to support the tray and are of sufficient length to elevate the tray a distance above the reach of ants (11). An insect deterrent (12) is located on the underside of the tray around the juncture of each leg (8) with the tray (6) to prevent insects proceeding along the legs to the tray. The legs (8) depend downwards and respectively terminate in bayonet heads (16) (best seen in Figure 2) that are received into complementary sockets (14) formed in the topside of base plate (10).
