(54) Title: TEST DEVICE

120

(57) Abstract: Disclosed is a test device for testing characteristics of a subject-to-be-tested with a built-in antenna that emits a wireless signal. The test device includes: a signal probe including one end portion to be in contact with a first terminal of the subject-to-be-tested to transmit a test signal; a ground probe to be in contact with a second terminal of the subject-to-be-tested; and a socket block including a probe supporter to support the signal probe and the ground probe, and a waveguide corresponding to the antenna of the subject-to-be-tested and penetrating therethrough in a lengthwise direction of the signal probe to measure the wireless signal in a different area from the probe supporter.
