(54) Title: SYSTEM FOR COUPLING OF PILES

Fig. 1

(57) Abstract: Attachment system (1) for detachably coupling a female tube end (4) and a male tube end (5) to each other to form foundation piles, comprising: - corresponding cylindrical sleeve holes (8, 9) in tube sleeves of the tube ends (4, 5); - a coupling element (6) which is fittable in the sleeve holes (8, 9) and rotatable through an angle therein; - a blocking pin (13) on the coupling element (6) or one of the sleeve holes (8, 9); and - a blocking slot (14) in one of the sleeve holes (8, 9) or the base body (7), so that the blocking pin (13) engages in the blocking slot (14) upon rotation of the coupling element (6) in the sleeve holes (8, 9); wherein one of the sleeve holes (8, 9) and the base body (7) are provided with corresponding sleeve slots (10, 11, 12) in order together to form a fitting hole to fit a blocking element (15) therein in order to prevent rotation of the coupling element (6) in the sleeve holes (8, 9).
