(54) Title: ROTARY SPUTTER TARGET ASSEMBLY

(57) Abstract: This invention utilizes a co-extrusion or co-drawing process to directly bond a tubular target to an inner backing tube. The co-extrusion or co-drawing process reduces the inner and outer diameters of the outer tubular target to cause portions of the target to protrude and at least partially fill into grooves along the inner backing tube. The filling causes the target to interlock to the backing plate
