

ABSTRACT

SMART CARD, PORTABLE ELECTRONIC DEVICE AND SMART CARD PROCESSING DEVICE

According to an embodiment, a smart card includes a communication section and a control section. The communication section communicates with the external device. The control section sets up a first speed as the communication speed used for communication with the external device by the communication section. Moreover, the control section changes the communication speed from the first speed set up to a second speed specified by a change request when the control section receives the change request of the communication speed from the external device by the communication section.
