

ABSTRACT

In a magnetic marker system (1) including a magnetic marker (10) disposed in a travel environment so as to be detectable by a magnetic sensor attached to a vehicle (5) and a server apparatus (11) which acquires detection information of the magnetic marker (10) from each vehicle (5), the detection information uploaded from a vehicle (5) side to the server apparatus (11) includes marker information, which is identification information of a corresponding magnetic marker (10), and the server apparatus (11) estimates the state of the magnetic marker (10) based on the detection information from each vehicle (5).
