

## BRACKET UNIT FOR UNDER INDUCTION RANGE AND UPPER PLATE ASSEMBLY HAVING THE SAME

### **[Abstract]**

Provided is a bracket unit for installing an under induction range. The bracket unit comprises a main body; a first adhesion surface portion formed on a lower surface of the main body, wherein a first adhesive is applied to the first adhesion surface portion; a second adhesion protrusion protruding from the lower surface of the main body and having a height from the first adhesion surface portion, wherein the second adhesion surface portion onto which a second adhesive is applied is formed in parallel with the first adhesion surface portion; and a cover portion coupled to an upper surface of the main body and configured to mount the under induction range thereon to be installed to an object to be fixed.
