(54) Title: AUTOMATED STATION COMPRISING A PROCESSING TOOL FOR EDIBLE LIQUIDS AND ASSEMBLING METHOD THEREOF

Fig. 1

Fig. 2

(57) Abstract: An automated station is provided with a tool (11) comprising a linear actuator (16) having a power supply inlet adapted to be releasably connected to a feed line; a container (13) for edible liquids; a closure (14) movable by means of the linear actuator (16) between a closed position in which the edible liquid is in the container so that, for example, the liquid is shaken by the action of the automated station and an open position in which the edible liquid is poured out of the container in a controlled manner through the action of the automated station; and a pivoted lever arm (17) and connected between the linear actuator (16) and the closure (14) so as to reduce the load applied by the actuator to decrease a first resultant force applied by the closure on a fluid seal (32) in said closed position with respect to a second force applied by the actuator to the pivoted lever arm.
