(54) Title: FLAVOR MOLECULES

(I)

(57) Abstract: A method of providing a range of flavors to an orally-receivable or ingestible product, the method including adding at least one compound, including salts thereof, of the formula (I) wherein R₁ may be selected from H, OH, O(CH₂)₂OH, OCH₂OCH₃ and formula (II), R₂ may be selected from a range of 5- and 6-membered heterocyclic rings, and wherein R₃ may be selected from H and OH. The compounds give rise to a wide range of flavors, and some are useful as sweetness enhancers, this allowing sweetener content to be reduced while maintaining sweetness. Also disclosed are orally-receivable or ingestible products including the compounds.
