(54) Title: MULTILAYER ELECTRONIC DEVICE HAVING IMPROVED CONNECTIVITY AND METHOD FOR MAKING THE SAME

FIG. 3

(57) Abstract: A method is disclosed for making a multilayer electronic device. The method includes placing a screen printing mask on a layer of support material and printing a conductive pattern on a layer of support material using the screen printing mask. The conductive pattern includes a plurality of electrode shapes including respective central enlarged portions. The method includes cutting the layer of support material and conductive pattern along a plurality of cutting lines intersecting the central enlarged portions such that at least one of the plurality of electrode shapes is divided into a pair of electrodes along a cutting width. The cutting width is indicative of a cutting accuracy associated with at least one of the cutting lines.
