

AQUEOUS TOPICAL COMPOSITION

ABSTRACT

[Problem] The purpose of the present invention is to provide a pharmaceutical formulation with which it is possible to inhibit separation in an aqueous topical composition containing at least 0.005 parts by weight of a nicotinic acid ester derivative to 1 part by weight of a myristic acid ester derivative.

[Solution] In an aqueous topical composition that contains (A) a nicotinic acid ester derivative and (B) a myristic acid ester derivative and in which the component (A) content, relative to 1 part by weight of component (B), is at least 0.005 part by weight, when (C) menthol coexists with components (A) and (B), separation of the aqueous topical composition is inhibited.
