

APERTURED PLASTIC FILM

ABSTRACT OF THE DISCLOSURE

5 An apertured plastic film having a plurality of wales, a
plurality of sloped side walls extending from the wales
and a plurality of clusters of irregular micro-holes
defined by a network of fiber-like elements, each
cluster of irregular micro-holes being connected between
10 at least two of the sloped side walls. The film also
has a plurality of rows of undulating ribs having the
network of wales connected to opposite sides of the ribs
and extending in a transverse direction from the ribs.
The films of the invention are useful as covering
15 materials for absorbent products such as diâpers, wound
dressings and sanitary napkins.
