(54) Title: METHOD OF IMPROVING REPLICA SERVER PERFORMANCE AND A REPLICA SERVER SYSTEM

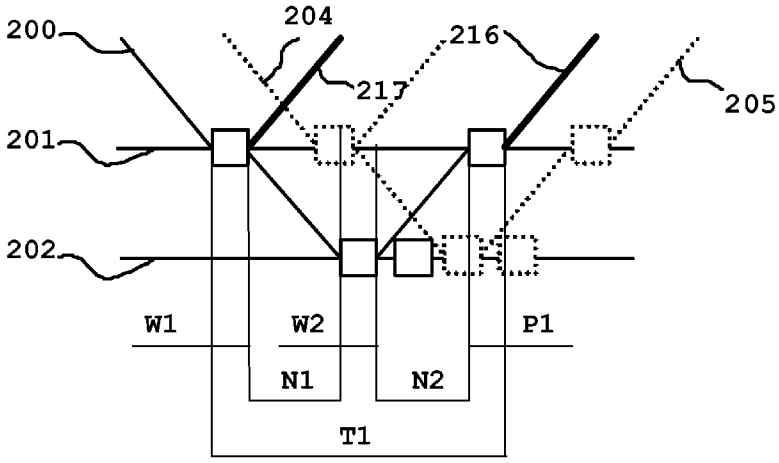

FIG. 4

(57) Abstract: An adaptable replica server system comprising a primary replica being associated with a primary storage for storing information and a primary processing means, and a secondary replica being associated with a secondary storage and a secondary processing means for creating confirmation data upon receiving input data from the primary replica, wherein the replica server system is designed to be configurable so as to work as an asynchronous server replica system and/or as a synchronous server replica system depending on an instruction.
