(54) Title: METHOD AND SYSTEM FOR REMOTE SERVER ADMINISTRATION

(57) Abstract: Methods and systems for enabling remote server administration using a terminal device of a wireless network. The terminal device is hosted by an application gateway designed to mediate signalling between the terminal device and web services of a data network. A web service implementing administration functionality for one or more managed server components (MSCs) is deployed on the network. A plurality of server administration applications is then installed on the terminal device. Each server administration application is designed to access the web service to provide a respective server management function.
