(54) Title: MULTI-PROCESSOR ENVIRONMENTS

(57) Abstract

In a multi-processor environment (Figure 2), a plurality of nodes (10, 11, 12) interconnected by a number of networks (10, 21, 22) each run a number of users processes (31, 32, etc., Figure 3) and messages transferred by the processes are transmitted sequentially from a transmitting node to a receiving node using a different network for each datagram to be transferred.
