CLAIMS

1. A drug delivery device (10, 10A, 10B) comprising:

a central axis (12) extending from a first longitudinal end (14) of the drug delivery device (10, 10A, 10B) to a second longitudinal end (16) of the drug delivery device (10, 10A, 10B);

a first body part (18);

a second body part (20);

an attachment part (22) connected to the first body part (18); and

an actuator mechanism (24) configured to rotate one of the first body part (18) and the second body part (20), wherein the actuator mechanism (24) is located more towards the first longitudinal end (14) than the second longitudinal end (16) along the central axis (12);

characterized in that the actuator mechanism (24) is located more towards the first longitudinal end (14) than the attachment part (22).

2. Drug delivery device of claim 1, wherein the actuator mechanism (24) is located fully within the first body part (18).

3. Drug delivery device of claim 1, wherein the actuator mechanism (24) is located partially within the first body part (18) and partially within the second body part (20).

4. Drug delivery device of any one of the preceding claims, wherein the actuator mechanism (24) is centered on the central axis (12).

5. Drug delivery device of any one of the preceding claims, further comprising a second attachment part (26) connected to the second body part (20).

6. Drug delivery device of claim 5, wherein the second attachment part (26) and the attachment part (22) are within 10mm of each other along the central axis (12).

7. Drug delivery device of claim 5, wherein the second attachment part (26) and the attachment part (22) are within 4.1mm of each other along the central axis (12).

8. Drug delivery device of claim 5, wherein the second attachment part (26) and the attachment part (22) are within 3.9mm of each other along the central axis (12).

9. Drug delivery device of any one of the preceding claims, wherein the drug delivery device (10, 10A, 10B) is a 000 size capsule.

10. Drug delivery device of any one of the preceding claims, wherein the drug delivery device (10, 10A, 10B) is a 00 size capsule.

11. Drug delivery device of any one of the preceding claims, wherein the drug delivery device (10, 10A, 10B) is a 0 size capsule.

12. Drug delivery device of any one of the preceding claims, wherein the attachment part (22) is configured to provide an active drug substance.

13. Drug delivery device of any one of the preceding claims, wherein the actuator mechanism (24) comprises a resilient part.

14. Drug delivery device of any one of the preceding claims, wherein the attachment part (22) comprises a spike (30) having a distal tip (32) directed non-parallel to the central axis (12).

15. Drug delivery device of any one of the preceding claims, wherein the first body part (18) forms a portion of the first longitudinal end (14) and/or the second body part (20) forms a portion of the second longitudinal end (16).
