(54) Title: A MOBILE MATERIAL TRANSFER SYSTEM FOR DELIVERY AND RECEIVING OF SOLID AND LIQUID MATERIAL OR COMBINATIONS THEREOF

(57) Abstract: A material transfer unit moveable between a supply station and a material storage tank or cooking vat including: at least one mobile container, the container having an internal compartment for receiving a quantity of material or mixture of materials from the supply station, a controller operatively connected to the supply station, a pump means supported by the container for transferring material from the internal compartment to a vat or other storage or packaging means, a weigh cartridge including a weigh pan, the weigh pan being operably connectable to the controller, at least one mounting portion adjacent to or on the container for removably receiving the weigh cartridge, whereby the weigh pan is connected to a weigh indicator which is calibrated to determine the amount of material transferred from or received by the container, and wherein upon receiving or transferring of material, the change in weight of the container is measured by the weigh pan and the actual amount of material transferred is determined by the weigh indicator on a weight differential calibration.
