(54) Title: METHOD AND APPARATUS FOR ESTABLISHING NETWORK CONNECTION, ELECTRONIC DEVICE AND STORAGE MEDIUM

(54) 发明名称: 一种建立网络连接的方法、装置、电子设备及存储介质

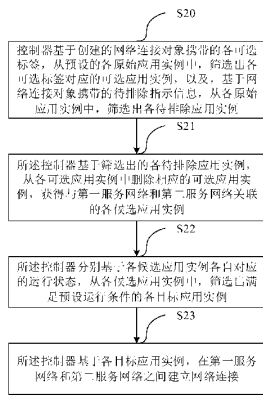

图 2A

S20 On the basis of selectable tags carried by created network connection objects, a controller screens out selectable application instances corresponding to the selectable tags from amongst preset original application instances, and on the basis of exclusion indicating information carried by the network connection objects, screens out from amongst the original application instances application instances to be excluded

S21 On the basis of the screened application instances to be excluded, the controller deletes corresponding selectable application instances from amongst the selectable application instances, so as to obtain each candidate application instance associated with a first service network and a second service network

S22 On the basis of the operating state corresponding to each candidate application instance, the controller screens out each target application instance meeting a preset operating condition from amongst the candidate application instances

S23 On the basis of each target application instance, the controller establishes network connection between the first service network and the second service network

(57) Abstract: The present application relates to a method and apparatus for establishing network connection, an electronic device and a storage medium. The method comprises: on the basis of selectable tags carried by created network connection objects, screening out selectable application instances corresponding to each of the selectable tags, and on the basis of exclusion indicating information carried by the network connection objects, screening out each application instance to be excluded; on the basis of each screened application instance to be excluded, obtaining each candidate application instance associated with a first service network and a second service network; on the basis of the operating state corresponding to each candidate application instance, screening out each target application instance meeting a preset operating condition from amongst the candidate application instances; and on the basis of each target application instance, establishing network connection between the first service network and the second service network.

(57) 摘要: 涉及一种建立网络连接的方法、装置、电子设备及存储介质, 该方法包括: 基于创建的网络连接对象携带的各可选标签, 筛选出各可选标签对应的可选应用实例, 以及, 基于网络连接对象携带的待排除指示信息, 筛选出各待排除应用实例, 基于筛选出的各待排除应用实例, 获得与第一服务网络和第二服务网络关联的各候选应用实例, 分别基于各候选应用实例各自对应的运行状态, 从各候选应用实例中, 筛选出满足预设运行条件的各目标应用实例; 基于各目标应用实例, 在第一服务网络和第二服务网络之间建立网络连接。
