

Bicyclic pyrazinone derivatives

BACKGROUND OF THE INVENTION

5 The invention had the object of finding novel compounds having valuable properties, in particular those which can be used for the preparation of medicaments.

10 The present invention relates to bicyclic pyrazinone derivatives which inhibit the activity of Tankyrases (TANKs) and poly(ADP-ribose)polymerase PARP-1. The compounds of this invention are therefore useful in treating diseases such as cancer, multiple sclerosis, cardiovascular diseases, central nervous system
15 injury and different forms of inflammation. The present invention also provides methods for preparing these compounds, pharmaceutical compositions comprising these compounds, and methods of treating diseases utilizing pharmaceutical compositions comprising these compounds.

20 The nuclear enzyme poly(ADP-ribose) polymerase-1 (PARP-1) is a member of the PARP enzyme family. This growing family of enzymes consist of PARPs such as, for example: PARP-1, PARP-2, PARP-3 and Vault-PARP; and Tankyrases (TANKs), such as, for example: TANK-1 and TANK-2. PARP is
25 also referred to as poly(adenosine 5'-diphospho-ribose) polymerase or PARS (poly(ADP-ribose) synthetase).

TANK-1 seems to be required for the polymerization of mitotic spindle-associated poly(ADP-ribose). The poly(ADP-ribosyl)ation activity of TANK-1
30 might be crucial for the accurate formation and maintenance of spindle bipolarity. Furthermore, PARP activity of TANK-1 has been shown to be required for normal telomere separation before anaphase. Interference with tankyrase PARP activity results in aberrant mitosis, which engenders a
35 transient cell cycle arrest, probably due to spindle checkpoint activation,

followed by cell death. Inhibition of tankyrases is therefore expected to have a cytotoxic effect on proliferating tumor cells (WO 2008/107478).

PARP inhibitors are described by M. Rouleau et al. in Nature Reviews,
5 Volume 10, 293-301 in clinical cancer studies (Table 2, page 298).

According to a review by Horvath and Szabo (Drug News Perspect 20(3), April
2007, 171-181) most recent studies demonstrated that PARP inhibitors
enhance the cancer cell death primarily because they interfere with DNA
10 repair on various levels. More recent studies have also demonstrated that
PARP inhibitors inhibit angiogenesis, either by inhibiting growth factor
expression, or by inhibiting growth factor-induced cellular proliferative
responses. These findings might also have implications on the mode of PARP
15 inhibitors' anticancer effects in vivo.

Also a study by Tentori et al. (Eur. J. Cancer, 2007, 43 (14) 2124-2133) shows
that PARP inhibitors abrogate VEGF or placental growth factor-induced
migration and prevent formation of tubule-like networks in cell-based systems,
20 and impair angiogenesis in vivo. The study also demonstrates that growth
factor-induced angiogenesis is deficient in PARP-1 knock-out mice. The
results of the study provide evidence for targeting PARP for anti-angiogenesis,
adding novel therapeutic implications to the use of PARP inhibitors in cancer
treatment.
25

Defects in conserved signaling pathways are well known to play key roles in
the origins and behavior of essentially all cancers (E.A.Fearon, Cancer Cell,
Vol. 16, Issue 5, 2009, 366-368). The Wnt pathway is a target for anti-cancer
therapy. A key feature of the Wnt pathway is the regulated proteolysis
30 (degradation) of β -catenin by the β -catenin destruction complex. Proteins like
WTX, APC or Axin are involved in the degradation process. A proper
degradation of β -catenin is important to avoid an inappropriate activation of
the Wnt pathway which has been observed in many cancers. Tankyrases
35 inhibit activity of Axin and hence inhibit the degradation of β -catenin.

Consequently, tankyrase inhibitors increase degradation of β -catenin. A recent paper in the journal *Nature* not only offers important new insights into proteins regulating Wnt signaling but also further supports the approach to antagonize β -catenin levels and localization via small molecules (Huang et al., 2009; Nature, Vol 461, 614-620). The compound XAV939 inhibits growth of DLD-1-cancer cells. They found that XAV9393 blocked Wnt-stimulated accumulation of β -catenin by increasing the levels of the AXIN1 and AXIN2 proteins. Subsequent work by the authors established that XAV939 regulates AXIN levels via inhibition of tankyrases 1 and 2 (TNKS1 and TNKS2), both of which are members of the poly(ADP-ribose) polymerase (PARP) protein family (S.J. Hsiao et al., Biochimie 90, 2008, 83-92).

It has been found that the compounds according to the invention and salts thereof have very valuable pharmacological properties while being well tolerated.

The present invention specifically relates to compounds of the formula I which inhibit Tankyrase 1 and 2, to compositions which comprise these compounds, and to processes for the use thereof for the treatment of TANK-induced diseases and complaints.

The compounds of the formula I can furthermore be used for the isolation and investigation of the activity or expression of TANKs. In addition, they are particularly suitable for use in diagnostic methods for diseases in connection with unregulated or disturbed TANK activity.

The host or patient can belong to any mammalian species, for example a primate species, particularly humans; rodents, including mice, rats and hamsters; rabbits; horses, cows, dogs, cats, etc. Animal models are of interest for experimental investigations, providing a model for treatment of human disease.

5 The susceptibility of a particular cell to treatment with the compounds according to the invention can be determined by in vitro tests. Typically, a culture of the cell is combined with a compound according to the invention at various concentrations for a period of time which is sufficient to allow active agents such as anti IgM to induce a cellular response such as expression of a surface marker, usually between about one hour and one week. In vitro testing can be carried out using cultivated cells from blood or from a biopsy sample.

10 The amount of surface marker expressed is assessed by flow cytometry using specific antibodies recognising the marker.

The dose varies depending on the specific compound used, the specific disease, the patient status, etc. A therapeutic dose is typically sufficient

15 considerably to reduce the undesired cell population in the target tissue while the viability of the patient is maintained. The treatment is generally continued until a considerable reduction has occurred, for example an at least about 50% reduction in the cell burden, and may be continued until essentially no more undesired cells are detected in the body.

20

PRIOR ART

25 Other pyrrolopyrazinones are described as V1b receptor antagonists and as intermediates for manufacturing these compounds in WO 2009/130231 A1 and in WO 2009/130232 A1.

Other pyrazolopyrazinones are described as intermediates for manufacturing GSK3 inhibitors in WO 2009/007029 A1.

30 Other pyrazolopyrazinones are described as intermediates for manufacturing PI3 kinase inhibitors in WO WO 2011/089400 A1.

SUMMARY OF THE INVENTION

35 The invention relates to compounds of the formula I

5 in which

- R^1 denotes H, F, Cl, CN, CH₃, CH₂OH, CH₂Cl, CH₂Br, CF₃, CHF₂ or CH₂F,
- R^2 denotes H or A,
- 10 R^3 denotes H, F, Cl, CH₃, CF₃ or CHF₂,
- X denotes CR³ or N,
- Y denotes Ar¹, Carb, Het¹ or Cyc,
- 15 Ar¹ denotes phenyl or naphthyl, which is unsubstituted or mono-, di- or trisubstituted by Hal, A, [C(R²)₂]_pOR², [C(R²)₂]_pN(R²)₂, [C(R²)₂]_pHet², NO₂, CN, [C(R²)₂]_pCOOR², [C(R²)₂]_pCON(R²)₂, NR²COA, NR²SO₂A, [C(R²)₂]_pSO₂N(R²)₂, S(O)_nA, COHet³, O[C(R²)₂]_mN(R²)₂, O[C(R²)₂]_pAr²,
 20 O[C(R²)₂]_pHet², NHCOOA, NHCON(R²)₂, Cyc, CHO and/or COA,
- Ar² denotes phenyl, which is unsubstituted or mono- or disubstituted by Hal, A, [C(R²)₂]_pOR², [C(R²)₂]_pN(R²)₂, [C(R²)₂]_pHet³, NO₂, CN, [C(R²)₂]_pCOOR, [C(R²)₂]_pN(R²)₂, N(R²)₂COA, NR²SO₂A,
 25 [C(R²)₂]_pSO₂N(R²)₂, S(O)_nA, COHet³, O[C(R²)₂]_mN(R²)₂, O[C(R²)₂]_pHet³, NHCOOA, NHCON(R²)₂, CHO and/or COA,
- Het¹ denotes pyrrolidinyl, azetidiny, tetrahydroimidazolyl, tetrahydrofuranyl, tetrahydropyrazolyl, tetrahydropyranyl, piperidinyl, morpholinyl, hexahydropyridazinyl, hexahydropyrimidinyl, [1,3]dioxolanyl, piperazinyl,
 30 furyl, thienyl, pyrrolyl, imidazolyl, pyrazolyl, oxazolyl, isoxazolyl, oxadiazolyl, thiazolyl, triazolyl, tetrazolyl, pyridyl, pyrimidyl, pyridazinyl, indolyl, isoindolyl, benzimidazolyl, indazolyl, quinolyl, 1,3-benzodioxolyl, benzothiophenyl, benzofuranyl, imidazopyridyl or furo[3,2-b]pyridyl, each of which is unsubstituted or mono- or disubstituted by
 35

- 5 Hal, A, $[C(R^2)_2]_pOR^2$, $[C(R^2)_2]_pN(R^2)_2$, $[C(R^2)_2]_pHet^2$, $[C(R^2)_2]_pAr^2$, NO_2 ,
 CN, $[C(R^2)_2]_pCOOR^2$, $[C(R^2)_2]_pCON(R^2)_2$, NR^2COA , NR^2SO_2A ,
 $[C(R^2)_2]_pSO_2N(R^2)_2$, $S(O)_nA$, $COHet^3$, $O[C(R^2)_2]_mN(R^2)_2$, $O[C(R^2)_2]_pAr^2$,
 $O[C(R^2)_2]_pHet^2$, $NHCOOA$, $NHCON(R^2)_2$, CHO , COA , $=S$, $=NR$ and/or
 $=O$,
- Carb denotes indanyl or tetrahydronaphthyl, each of which may be
 unsubstituted or mono-, di-, tri- or tetrasubstituted by A,
- 10 Cyc denotes cyclic alkyl with 3, 4, 5, 6 or 7 C-atoms, which may be
 unsubstituted or monosubstituted by A, OH, Hal, CN or Ar^2 or Het^2 ,
- Het^2 denotes pyrrolidinyl, azetidiny, tetrahydroimidazolyl, tetrahydrofuranyl,
 tetrahydropyrazolyl, tetrahydropyranyl, piperidinyl, morpholinyl, hexa-
 15 hydropyridazinyl, hexahydropyrimidinyl, [1,3]dioxolanyl, piperazinyl,
 furyl, thienyl, pyrrolyl, imidazolyl, pyrazolyl, oxazolyl, isoxazolyl,
 oxadiazolyl, thiazolyl, triazolyl, tetrazolyl, pyridyl, pyrimidyl, pyridazinyl,
 indolyl, isoindolyl, benzimidazolyl, indazolyl, quinolyl, 1,3-benzo-
 dioxolyl, benzothiophenyl, benzofuranyl, imidazopyridyl or furo[3,2-
 20 b]pyridyl, each of which is unsubstituted or mono- or disubstituted by
 Hal, A, $[C(R^2)_2]_pOR^2$, $[C(R^2)_2]_pN(R^2)_2$, $[C(R^2)_2]_pHet^3$, $[C(R^2)_2]_pOHet^3$,
 $[C(R^2)_2]_pAr^2$, NO_2 , CN, $[C(R^2)_2]_pCOOR^2$, $[C(R^2)_2]_pCON(R^2)_2$, NR^2COA ,
 NR^2SO_2A , $[C(R^2)_2]_pSO_2N(R^2)_2$, $S(O)_nA$, $COHet^3$, $O[C(R^2)_2]_mN(R^2)_2$,
 25 $O[C(R^2)_2]_pAr^2$, $O[C(R^2)_2]_pHet^3$, $NHCOOA$, $NHCON(R^2)_2$, CHO , COA ,
 $=S$, $=NR$ and/or $=O$,
- Het^3 denotes dihydropyrrolyl, pyrrolidinyl, azetidiny, oxetanyl, tetrahydro-
 imidazolyl, dihydropyrazolyl, tetrahydropyrazolyl, tetrahydrofuranyl,
 30 dihydropyridyl, tetrahydropyridyl, piperidinyl, morpholinyl, hexahydro-
 pyridazinyl, hexahydropyrimidinyl, [1,3]dioxolanyl, tetrahydropyranyl or
 piperazinyl, each of which is unsubstituted or mono- or disubstituted
 by Hal, CN, OR^2 , $COOR^2$, $CON(R^2)_2$, $S(O)_nA$, $S(O)_nAr$, COA , A and/or
 $=O$,
- 35

5 A denotes unbranched or branched alkyl with 1-10 C-atoms, wherein two adjacent CH- and/or CH₂-groups may form a double bond and wherein one or two non-adjacent CH- and/or CH₂-groups may be replaced by N-, O- and/or S-atoms and wherein 1-7 H-atoms may be replaced by F or Cl,

Hal denotes F, Cl, Br or I,

n denotes 0, 1 or 2,

10 m denotes 1, 2 or 3,

p denotes 0, 1, 2, 3 or 4,

15 with the proviso that, if R¹ is CH₂OH, then Ar¹ is not 2,4-dichlorophenyl, and pharmaceutically usable solvates, salts, tautomers and stereoisomers thereof, including mixtures thereof in all ratios.

20 The invention also relates to the optically active forms (stereoisomers), the enantiomers, the racemates, the diastereomers and the hydrates and solvates of these compounds.

The invention relates to compounds of formula I and their tautomers of formula Ia

30 Moreover, the invention relates to pharmaceutically acceptable derivatives of compounds of formula I.

The term solvates of the compounds is taken to mean adductions of inert solvent molecules onto the compounds which form owing to their mutual attractive force. Solvates are, for example, mono- or dihydrates or alkoxides. It is understood, that the invention also relates to the solvates of the salts.

35

The term pharmaceutically acceptable derivatives is taken to mean, for example, the salts of the compounds according to the invention and also so-called prodrug compounds.

5 As used herein and unless otherwise indicated, the term "prodrug" means a derivative of a compound of formula I that can hydrolyze, oxidize, or otherwise react under biological conditions (in vitro or in vivo) to provide an active compound, particularly a compound of formula I. Examples of prodrugs include, but are not limited to, derivatives and metabolites of a compound of
10 formula I that include biohydrolyzable moieties such as biohydrolyzable amides, biohydrolyzable esters, biohydrolyzable carbamates, biohydrolyzable carbonates, biohydrolyzable ureides, and biohydrolyzable phosphate analogues. In certain embodiments, prodrugs of compounds with carboxyl
15 functional groups are the lower alkyl esters of the carboxylic acid. The carboxylate esters are conveniently formed by esterifying any of the carboxylic acid moieties present on the molecule. Prodrugs can typically be prepared using well-known methods, such as those described by Burger's Medicinal
20 Chemistry and Drug Discovery 6th ed. (Donald J. Abraham ed., 2001, Wiley) and Design and Application of Prodrugs (H. Bundgaard ed., 1985, Harwood Academic Publishers GmH).

25 The expression "effective amount" denotes the amount of a medicament or of a pharmaceutical active ingredient which causes in a tissue, system, animal or human a biological or medical response which is sought or desired, for example, by a researcher or physician.

In addition, the expression "therapeutically effective amount" denotes an
30 amount which, compared with a corresponding subject who has not received this amount, has the following consequence:
improved treatment, healing, prevention or elimination of a disease, syndrome, condition, complaint, disorder or side-effects or also the reduction in
35 the advance of a disease, complaint or disorder.

The expression "therapeutically effective amount" also encompasses the amounts which are effective for increasing normal physiological function.

The invention also relates to the use of mixtures of the compounds of the formula I, for example mixtures of two diastereomers, for example in the ratio 1:1, 1:2, 1:3, 1:4, 1:5, 1:10, 1:100 or 1:1000.

These are particularly preferably mixtures of stereoisomeric compounds.

"Tautomers" refers to isomeric forms of a compound that are in equilibrium with each other. The concentrations of the isomeric forms will depend on the environment the compound is found in and may be different depending upon, for example, whether the compound is a solid or is in an organic or aqueous solution.

The invention relates to the compounds of the formula I and salts thereof and to a process for the preparation of compounds of the formula I and pharmaceutically usable salts, solvates, tautomers and stereoisomers thereof, characterised in that

a) a compound of the formula II

in which R¹, X and Y have the meanings indicated in Claim 1, and A' denotes unbranched or branched alkyl with 1, 2, 3 or 4 C-atoms,

is reacted with NH₃, NH₄OAc or (NH₄)₂CO₃,

or

- 10 -

b) a compound of the formula III

in which R¹, X and Y have the meanings indicated in Claim 1,

10 is cyclised with H₂O₂ under basic conditions,

or

15 c) a radical R¹ and/or Y is converted into another radical R¹ and/or Y by

i) converting COOH or CHO into H,

ii) converting an ester group into an alcohol group,

iii) converting in a Suzuki coupling a halogenated phenyl ring into an
arylated phenyl ring,

20 iv) converting a halogenated alkyl group into an alkyl group,

or

25 d) it is liberated from one of its functional derivatives by treatment with a
solvolysing or hydrogenolysing agent,

and/or

30 a base or acid of the formula I is converted into one of its salts.

Above and below, the radicals R¹, X and Y have the meanings indicated for
the formula I, unless expressly stated otherwise.

35

A denotes alkyl, this is unbranched (linear) or branched, and has 1, 2, 3, 4, 5, 6, 7, 8, 9 or 10 C atoms. A preferably denotes methyl, furthermore ethyl, propyl, isopropyl, butyl, isobutyl, sec-butyl or tert-butyl, furthermore also pentyl, 1-, 2- or 3-methylbutyl, 1,1-, 1,2- or 2,2-dimethylpropyl, 1-ethylpropyl, hexyl, 1-, 2-, 3- or 4-methylpentyl, 1,1-, 1,2-, 1,3-, 2,2-, 2,3- or 3,3-dimethylbutyl, 1- or 2-ethylbutyl, 1-ethyl-1-methylpropyl, 1-ethyl-2-methylpropyl, 1,1,2- or 1,2,2-trimethylpropyl, furthermore preferably, for example, trifluoromethyl.

A very particularly preferably denotes alkyl having 1, 2, 3, 4, 5 or 6 C atoms, preferably methyl, ethyl, propyl, isopropyl, butyl, isobutyl, sec-butyl, tert-butyl, pentyl, hexyl, trifluoromethyl, pentafluoroethyl or 1,1,1-trifluoroethyl.

Moreover, A denotes preferably CH_2OCH_3 , $\text{CH}_2\text{CH}_2\text{OH}$ or $\text{CH}_2\text{CH}_2\text{OCH}_3$.

Cyclic alkyl has 3-7 C atoms, preferably denotes cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl or cycloheptyl.

Ar^1 denotes preferably o-, m- or p-tolyl, o-, m- or p-ethylphenyl, o-, m- or p-propylphenyl, o-, m- or p-isopropylphenyl, o-, m- or p-tert-butylphenyl, o-, m- or p-hydroxyphenyl, o-, m- or p-nitrophenyl, o-, m- or p-aminophenyl, o-, m- or p-(N-methylamino)phenyl, o-, m- or p-(N-methylaminocarbonyl)phenyl, o-, m- or p-methoxyphenyl, o-, m- or p-ethoxyphenyl, o-, m- or p-ethoxycarbonylphenyl, o-, m- or p-(N,N-dimethylamino)phenyl, o-, m- or p-(N,N-dimethylaminocarbonyl)phenyl, o-, m- or p-(N-ethylamino)phenyl, o-, m- or p-(N,N-diethylamino)phenyl, o-, m- or p-fluorophenyl, o-, m- or p-bromophenyl, o-, m- or p-chlorophenyl, o-, m- or p-(methylsulfonamido)phenyl, o-, m- or p-(methylsulfonyl)phenyl, o-, m- or p-cyanophenyl, o-, m- or p-carboxyphenyl, o-, m- or p-methoxycarbonylphenyl, o-, m- or p-formylphenyl, o-, m- or p-acetylphenyl, o-, m- or p-aminosulfonylphenyl, o-, m- or p-[2-(morpholin-4-yl)ethoxy]phenyl, o-, m- or p-[3-(N,N-diethylamino)propoxy]phenyl, furthermore preferably 2,3-, 2,4-, 2,5-, 2,6-, 3,4- or 3,5-difluorophenyl, 2,3-, 2,4-, 2,5-, 2,6-, 3,4- or 3,5-dichlorophenyl, 2,3-, 2,4-, 2,5-, 2,6-, 3,4- or 3,5-dibromophenyl, 2,4- or 2,5-dinitrophenyl, 2,5- or 3,4-dimethoxyphenyl, 3-nitro-4-chlorophenyl, 3-amino-4-chloro-, 2-amino-3-chloro-, 2-amino-4-chloro-, 2-amino-5-chloro- or 2-amino-6-

- chlorophenyl, 2-nitro-4-N,N-dimethylamino- or 3-nitro-4-N,N-dimethylamino-phenyl, 2,3-diaminophenyl, 2,3,4-, 2,3,5-, 2,3,6-, 2,4,6- or 3,4,5-tri-chlorophenyl, 2,4,6-trimethoxyphenyl, 2-hydroxy-3,5-dichlorophenyl, p-iodo-phenyl, 3,6-dichloro-4-aminophenyl, 4-fluoro-3-chlorophenyl, 2-fluoro-4-
 5 bromophenyl, 2,5-difluoro-4-bromophenyl, 3-bromo-6-methoxyphenyl, 3-chloro-6-methoxyphenyl, 3-chloro-4-acetamidophenyl, 3-fluoro-4-methoxyphenyl, 3-amino-6-methylphenyl, 3-chloro-4-acetamidophenyl or 2,5-dimethyl-4-chlorophenyl.
- 10 Ar^1 furthermore preferably denotes phenyl, which is unsubstituted or mono-, di- or trisubstituted by Hal, A, $[C(R^2)_2]_pOR^2$, $[C(R^2)_2]_pN(R^2)_2$, $[C(R^2)_2]_pHet^2$, NO_2 , Cyc, $[C(R^2)_2]_pCOOR^2$, $O[C(R^2)_2]_pAr^2$ and/or $O[C(R^2)_2]_pHet^2$.
- 15 Ar^2 denotes preferably o-, m- or p-tolyl, o-, m- or p-ethylphenyl, o-, m- or p-propylphenyl, o-, m- or p-isopropylphenyl, o-, m- or p-tert-butylphenyl, o-, m- or p-hydroxyphenyl, o-, m- or p-nitrophenyl, o-, m- or p-aminophenyl, o-, m- or p-(N-methylamino)phenyl, o-, m- or p-(N-methylaminocarbonyl)phenyl, o-, m- or p-methoxyphenyl, o-, m- or p-ethoxyphenyl, o-, m- or p-ethoxycarbonyl-
 20 phenyl, o-, m- or p-(N,N-dimethylamino)phenyl, o-, m- or p-(N,N-dimethylaminocarbonyl)phenyl, o-, m- or p-(N-ethylamino)phenyl, o-, m- or p-(N,N-diethylamino)phenyl, o-, m- or p-fluorophenyl, o-, m- or p-bromophenyl, o-, m- or p-chlorophenyl, o-, m- or p-(methylsulfonamido)phenyl, o-, m- or p-(methylsulfonyl)phenyl, o-, m- or p-cyanophenyl, o-, m- or p-carboxyphenyl, o-, m- or p-methoxycarbonylphenyl, o-, m- or p-formylphenyl, o-, m- or p-acetylphenyl, o-, m- or p-aminosulfonylphenyl, o-, m- or p-[2-(morpholin-4-yl)ethoxy]phenyl, o-, m- or p-[3-(N,N-diethylamino)propoxy]phenyl, furthermore preferably 2,3-,
 25 2,4-, 2,5-, 2,6-, 3,4- or 3,5-difluorophenyl, 2,3-, 2,4-, 2,5-, 2,6-, 3,4- or 3,5-dichlorophenyl, 2,3-, 2,4-, 2,5-, 2,6-, 3,4- or 3,5-dibromophenyl, 2,4- or 2,5-dinitrophenyl, 2,5- or 3,4-dimethoxyphenyl, 3-nitro-4-chlorophenyl, 3-amino-4-chloro-, 2-amino-3-chloro-, 2-amino-4-chloro-, 2-amino-5-chloro- or 2-amino-6-chlorophenyl, 2-nitro-4-N,N-dimethylamino- or 3-nitro-4-N,N-dimethylamino-
 30 phenyl, 2,3-diaminophenyl, 2,3,4-, 2,3,5-, 2,3,6-, 2,4,6- or 3,4,5-tri-chlorophenyl, 2,4,6-trimethoxyphenyl, 2-hydroxy-3,5-dichlorophenyl, p-iodo-

phenyl, 3,6-dichloro-4-aminophenyl, 4-fluoro-3-chlorophenyl, 2-fluoro-4-bromophenyl, 2,5-difluoro-4-bromophenyl, 3-bromo-6-methoxyphenyl, 3-chloro-6-methoxyphenyl, 3-chloro-4-acetamidophenyl, 3-fluoro-4-methoxyphenyl, 3-amino-6-methylphenyl, 3-chloro-4-acetamidophenyl or 2,5-dimethyl-4-chlorophenyl.

Ar² furthermore preferably denotes phenyl, which is unsubstituted or monosubstituted by [C(R²)₂]_pOR².

Het¹ preferably denotes pyrrolidinyl, azetidiny, tetrahydroimidazolyl, tetrahydrofuranyl, tetrahydropyrazolyl, tetrahydropyranyl, piperidinyl, morpholinyl, hexahydropyridazinyl, hexahydropyrimidinyl, [1,3]dioxolanyl, piperazinyl, furyl, thienyl, pyrrolyl, imidazolyl, pyrazolyl, oxazolyl, isoxazolyl, oxadiazolyl, thiazolyl, triazolyl, tetrazolyl, pyridyl, pyrimidyl, pyridazinyl, indolyl, isoindolyl, benzimidazolyl, indazolyl, quinolyl, 1,3-benzodioxolyl, benzothiophenyl, benzofuranyl, imidazopyridyl or furo[3,2-b]pyridyl, each of which is unsubstituted or mono- or disubstituted by A, [C(R²)₂]_pOR², [C(R²)₂]_pHet² and/or [C(R²)₂]_pAr².

Het¹ particularly preferably denotes pyrrolidinyl, piperidinyl, morpholinyl, pyrazolyl, pyridyl, pyrimidyl or 1,3-benzodioxolyl, each of which is unsubstituted or mono- or disubstituted by A, [C(R²)₂]_pOR², [C(R²)₂]_pHet² and/or [C(R²)₂]_pAr².

Het² preferably denotes pyrrolidinyl, azetidiny, tetrahydroimidazolyl, tetrahydrofuranyl, tetrahydropyrazolyl, tetrahydropyranyl, piperidinyl, morpholinyl, hexahydropyridazinyl, hexahydropyrimidinyl, [1,3]dioxolanyl, piperazinyl, furyl, thienyl, pyrrolyl, imidazolyl, pyrazolyl, oxazolyl, isoxazolyl, oxadiazolyl, thiazolyl, triazolyl, tetrazolyl, pyridyl, pyrimidyl, pyridazinyl, indolyl, isoindolyl, benzimidazolyl, indazolyl, quinolyl, 1,3-benzodioxolyl, benzothiophenyl, benzofuranyl, imidazopyridyl or furo[3,2-b]pyridyl, each of which is unsubstituted or mono- or disubstituted by A, [C(R²)₂]_pOR², [C(R²)₂]_pHet³ and/or [C(R²)₂]_pOHet³.

Het² particularly preferably denotes pyrrolidinyl, piperidinyl, morpholinyl, pyrazolyl, oxazolyl, isoxazolyl or oxadiazolyl, each of which is unsubstituted or mono- or disubstituted by A, [C(R²)₂]_pOR², [C(R²)₂]_pHet³ and/or
5 [C(R²)₂]_pOHet³.

Het³ preferably denotes dihydropyrrolyl, pyrrolidinyl, azetidiny, oxetanyl, tetrahydroimidazolyl, dihydropyrazolyl, tetrahydropyrazolyl, tetrahydrofuranyl,
10 dihydropyridyl, tetrahydropyridyl, piperidinyl, morpholinyl, hexahydro-pyridazinyl, hexahydropyrimidinyl, [1,3]dioxolanyl, tetrahydropyranyl or piperazinyl.

15 Het³ particularly preferably denotes pyrrolidinyl, piperidinyl, morpholinyl or tetrahydropyranyl.

Hal preferably denotes F, Cl or Br, but also I, particularly preferably F or Cl.

20 Throughout the invention, all radicals which occur more than once may be identical or different, i.e. are independent of one another.

The compounds of the formula I may have one or more chiral centres and can therefore occur in various stereoisomeric forms. The formula I encompasses
25 all these forms.

Accordingly, the invention relates, in particular, to the compounds of the formula I in which at least one of the said radicals has one of the preferred meanings indicated above. Some preferred groups of compounds may be
30 expressed by the following sub-formulae Ia to Ig, which conform to the formula I and in which the radicals not designated in greater detail have the meaning indicated for the formula I, but in which

35 in Ia Ar¹ denotes phenyl, which is unsubstituted or mono-, di- or trisubstituted by Hal, A, [C(R²)₂]_pOR², [C(R²)₂]_pN(R²)₂,

$[C(R^2)_2]_pHet^2$, NO_2 , Cyc, $[C(R^2)_2]_pCOOR^2$, $O[C(R^2)_2]_pAr^2$
and/or $O[C(R^2)_2]_pHet^2$;

- 5 in Ib Ar^2 denotes phenyl, which is unsubstituted or monosubstituted
by $[C(R^2)_2]_pOR^2$;
- 10 in Ic Het^1 denotes pyrrolidinyl, azetidiny, tetrahydroimidazolyl,
tetrahydrofuranyl, tetrahydropyrazolyl, tetrahydropyranyl,
piperidinyl, morpholinyl, hexahydropyridazinyl, hexahydro-
pyrimidinyl, [1,3]dioxolanyl, piperazinyl, furyl, thienyl,
pyrrolyl, imidazolyl, pyrazolyl, oxazolyl, isoxazolyl,
15 oxadiazolyl, thiazolyl, triazolyl, tetrazolyl, pyridyl, pyrimidyl,
pyridazinyl, indolyl, isoindolyl, benzimidazolyl, indazolyl,
quinolyl, 1,3-benzodioxolyl, benzothiophenyl, benzofuranyl,
imidazopyridyl or furo[3,2-b]pyridyl, each of which is
unsubstituted or mono- or disubstituted by A, $[C(R^2)_2]_pOR^2$,
20 $[C(R^2)_2]_pHet^2$ and/or $[C(R^2)_2]_pAr^2$;
- 25 in Id Het^2 denotes pyrrolidinyl, azetidiny, tetrahydroimidazolyl,
tetrahydrofuranyl, tetrahydropyrazolyl, tetrahydropyranyl,
piperidinyl, morpholinyl, hexahydropyridazinyl, hexahydro-
pyrimidinyl, [1,3]dioxolanyl, piperazinyl, furyl, thienyl,
pyrrolyl, imidazolyl, pyrazolyl, oxazolyl, isoxazolyl,
30 oxadiazolyl, thiazolyl, triazolyl, tetrazolyl, pyridyl, pyrimidyl,
pyridazinyl, indolyl, isoindolyl, benzimidazolyl, indazolyl,
quinolyl, 1,3-benzodioxolyl, benzothiophenyl, benzofuranyl,
imidazopyridyl or furo[3,2-b]pyridyl, each of which is
unsubstituted or mono- or disubstituted by A, $[C(R^2)_2]_pOR^2$,
35 $[C(R^2)_2]_pHet^3$ and/or $[C(R^2)_2]_pOHet^3$;
- in le Het^3 denotes dihydropyrrolyl, pyrrolidinyl, azetidiny, oxetanyl,
tetrahydroimidazolyl, dihydropyrazolyl, tetrahydropyrazolyl,

tetrahydrofuranyl, dihydropyridyl, tetrahydropyridyl, piperidinyl, morpholinyl, hexahydropyridazinyl, hexahydropyrimidinyl, [1,3]dioxolanyl, tetrahydropyranyl or piperazinyl;

5	in If	R ¹	denotes H, F, Cl, CN CH ₃ , CH ₂ OH, CH ₂ Cl, CH ₂ Br, CF ₃ , CHF ₂ or CH ₂ F,

30		Het ²	denotes pyrrolidinyl, piperidinyl, morpholinyl, pyrazolyl, oxazolyl, isoxazolyl or oxadiazolyl, each of which is unsubstituted or mono- or disubstituted by A, [C(R ²) ₂] _p OR ² , [C(R ²) ₂] _p Het ³ and/or [C(R ²) ₂] _p OHet ³ ,
		Het ³	denotes pyrrolidinyl, piperidinyl, morpholinyl or tetrahydropyranyl,
35		A	denotes unbranched or branched alkyl with 1-10 C-atoms, wherein two adjacent CH- and/or CH ₂ -groups may form a

double bond and wherein one or two non-adjacent CH- and/or CH₂-groups may be replaced by O-atoms and wherein 1-7 H-atoms may be replaced by F or Cl,

5 Hal denotes F, Cl, Br or I,

p denotes 0, 1, 2, 3 or 4,

with the proviso that, if R¹ is CH₂OH, then Ar¹ is not 2,4-dichlorophenyl,

10

and pharmaceutically usable salts, solvates, tautomers and stereoisomers thereof, including mixtures thereof in all ratios.

15

The compounds of the formula I and also the starting materials for their preparation are, in addition, prepared by methods known per se, as described in the literature (for example in the standard works, such as Houben-Weyl, Methoden der organischen Chemie [Methods of Organic Chemistry], Georg-Thieme-Verlag, Stuttgart), to be precise under reaction conditions which are known and suitable for the said reactions. Use can also be made here of variants known per se which are not mentioned here in greater detail.

20

25

The starting compounds of the formula II and of formula III are generally known. If they are novel, however, they can be prepared by methods known per se.

30

Compounds of the formula I can preferably be obtained by reacting a compound of the formula II with NH₃, NH₄OAc or (NH₄)₂CO₃. Depending on the conditions used, the reaction time is between a few minutes and 14 days, the reaction temperature is between about -10° and 140°, normally between 30° and 130°, in particular between about 60° and about 120°. The reaction is carried out in an inert solvent.

35

Examples of suitable inert solvents are hydrocarbons, such as hexane, petroleum ether, benzene, toluene or xylene; chlorinated hydrocarbons, such

as trichloroethylene, 1,2-dichloroethane, carbon tetrachloride, chloroform or dichloromethane; alcohols, such as methanol, ethanol, isopropanol, n-propanol, n-butanol or tert-butanol; ethers, such as diethyl ether, diisopropyl ether, tetrahydrofuran (THF) or dioxane; glycol ethers, such as ethylene glycol monomethyl or monoethyl ether, ethylene glycol dimethyl ether (diglyme);
ketones, such as acetone or butanone; amides, such as acetamide, dimethylacetamide or dimethylformamide (DMF); nitriles, such as acetonitrile; sulfoxides, such as dimethyl sulfoxide (DMSO); carbon disulfide; carboxylic acids, such as formic acid or acetic acid; nitro compounds, such as nitromethane or nitrobenzene; esters, such as ethyl acetate, or mixtures of the said solvents.

Particular preference is given to methanol or acetic acid.

Furthermore, compounds of the formula I can preferably be obtained by reacting a compound of the formula III with H_2O_2 under basic conditions. The reaction is carried out in an inert solvent, in the presence of an alkali or alkaline-earth metal hydroxide, carbonate or bicarbonate or another salt of a weak acid of the alkali or alkaline-earth metals, preferably of potassium, sodium, calcium or caesium.

Depending on the conditions used, the reaction time is between a few minutes and 14 days, the reaction temperature is between about -10° and 140° , normally between 30° and 130° , in particular between about 60° and about 120° .

Examples of suitable inert solvents are hydrocarbons, such as hexane, petroleum ether, benzene, toluene or xylene; chlorinated hydrocarbons, such as trichloroethylene, 1,2-dichloroethane, carbon tetrachloride, chloroform or dichloromethane; alcohols, such as methanol, ethanol, isopropanol, n-propanol, n-butanol or tert-butanol; ethers, such as diethyl ether, diisopropyl ether, tetrahydrofuran (THF) or dioxane; glycol ethers, such as ethylene glycol monomethyl or monoethyl ether, ethylene glycol dimethyl ether (diglyme); ketones, such as acetone or butanone; amides, such as acetamide,

dimethylacetamide or dimethylformamide (DMF); nitriles, such as acetonitrile; sulfoxides, such as dimethyl sulfoxide (DMSO); carbon disulfide; carboxylic acids, such as formic acid or acetic acid; nitro compounds, such as nitromethane or nitrobenzene; esters, such as ethyl acetate, or mixtures of the said solvents.

Particular preference is given to CH_2Cl_2 and water or methanol and dimethylsulfoxide.

Compounds of the formula I can furthermore be obtained by converting a radical R^1 and/or Y into another radical R^1 and/or Y by

- i) converting COOH or CHO into H,
- ii) converting an ester group into an alcohol group,
- iii) converting in a Suzuki coupling a halogenated phenyl ring into an arylated phenyl ring,
- iv) converting a halogenated alkyl group into an alkyl group.

Step i):

Converting a COOH group into H preferably is carried out with copper powder under basic conditions, preferably in an organic solvent; preferably in quinoline under standard conditions.

Converting a CHO group into H preferably is carried out in an inert solvent, preferably in diethylenglycoldimethylether, in presence of 3-diphenylphosphanylpropyl(diphenyl)phosphane and rhodium(III)-chloride trihydrate under standard conditions.

Step ii):

Converting an ester group into an alcohol group, preferably is carried out in presence of Cerium(III) chloride with an alkylmagnesiumchloride in THF under standard conditions or with lithiumaluminiumhydride in THF.

Step iii):

Converting a halogenated phenyl ring into an arylated phenyl ring, is carried out under standard conditions for a Suzuki coupling.

5

Step iv):

Converting a halogenated alkyl group into an alkyl group preferably is carried out with LiAlH_4 in THF or with zinc in acetic acid under standard conditions

10

Compounds of the formula I can furthermore be obtained by liberating compounds of the formula I from one of their functional derivatives by treatment with a solvolysing or hydrogenolysing agent.

15

Preferred starting materials for the solvolysis or hydrogenolysis are those which conform to the formula I, but contain corresponding protected amino and/or hydroxyl groups instead of one or more free amino and/or hydroxyl groups, preferably those which carry an amino-protecting group instead of an H atom bonded to an N atom, in particular those which carry an $\text{R}'\text{-N}$ group, in which R' is an amino-protecting group, instead of an HN group, and/or those which carry a hydroxyl-protecting group instead of the H atom of a hydroxyl group, for example those which conform to the formula I, but carry a $\text{-COOR}''$ group, in which R'' is a hydroxyl-protecting group, instead of a -COOH group.

20

25

Preferred starting materials are also the oxadiazole derivatives, which can be converted into the corresponding amidino compounds.

30

It is also possible for a plurality of – identical or different – protected amino and/or hydroxyl groups to be present in the molecule of the starting material. If the protecting groups present are different from one another, they can in many cases be cleaved off selectively.

35

The term “amino-protecting group” is known in general terms and relates to groups which are suitable for protecting (blocking) an amino group against chemical reactions, but which are easy to remove after the desired chemical

reaction has been carried out elsewhere in the molecule. Typical of such groups are, in particular, unsubstituted or substituted acyl, aryl, aralkoxymethyl or aralkyl groups. Since the amino-protecting groups are removed after the desired reaction (or reaction sequence), their type and size are furthermore not crucial; however, preference is given to those having 1-20, in particular 1-8, carbon atoms. The term "acyl group" is to be understood in the broadest sense in connection with the present process. It includes acyl groups derived from aliphatic, araliphatic, aromatic or heterocyclic carboxylic acids or sulfonic acids, and, in particular, alkoxycarbonyl, aryloxy carbonyl and especially aralkoxycarbonyl groups. Examples of such acyl groups are alkanoyl, such as acetyl, propionyl and butyryl; aralkanoyl, such as phenylacetyl; aroyl, such as benzoyl and tolyl; aryloxyalkanoyl, such as POA; alkoxycarbonyl, such as methoxycarbonyl, ethoxycarbonyl, 2,2,2-trichloroethoxycarbonyl, BOC (tert-butoxycarbonyl) and 2-iodoethoxycarbonyl; aralkoxycarbonyl, such as CBZ ("carbobenzoxy"), 4-methoxybenzyloxycarbonyl and FMOC; and arylsulfonyl, such as Mtr. Preferred amino-protecting groups are BOC and Mtr, furthermore CBZ, Fmoc, benzyl and acetyl.

The term "hydroxyl-protecting group" is likewise known in general terms and relates to groups which are suitable for protecting a hydroxyl group against chemical reactions, but are easily removable after the desired chemical reaction has been carried out elsewhere in the molecule. Typical of such groups are the above-mentioned unsubstituted or substituted aryl, aralkyl or acyl groups, furthermore also alkyl groups. The nature and size of the hydroxyl-protecting groups are not crucial since they are removed again after the desired chemical reaction or reaction sequence; preference is given to groups having 1-20, in particular 1-10, carbon atoms. Examples of hydroxyl-protecting groups are, inter alia, benzyl, 4-methoxybenzyl, p-nitrobenzoyl, p-toluenesulfonyl, tert-butyl and acetyl, where benzyl, tetrahydropyranyl and tert-butyl are particularly preferred.

The compounds of the formula I are liberated from their functional derivatives – depending on the protecting group used – for example using strong acids, advantageously using TFA or perchloric acid, but also using other strong inorganic acids, such as hydrochloric acid or sulfuric acid, strong organic carboxylic acids, such as trichloroacetic acid, or sulfonic acids, such as benzene- or p-toluenesulfonic acid. The presence of an additional inert solvent is possible, but is not always necessary. Suitable inert solvents are preferably organic, for example carboxylic acids, such as acetic acid, ethers, such as tetrahydrofuran or dioxane, amides, such as DMF, halogenated hydrocarbons, such as dichloromethane, furthermore also alcohols, such as methanol, ethanol or isopropanol, and water. Mixtures of the above-mentioned solvents are furthermore suitable. TFA is preferably used in excess without addition of a further solvent, and perchloric acid is preferably used in the form of a mixture of acetic acid and 70% perchloric acid in the ratio 9:1. The reaction temperatures for the cleavage are advantageously between about 0 and about 50°, preferably between 15 and 30° (room temperature).

The BOC, OBut and Mtr groups can, for example, preferably be cleaved off using TFA in dichloromethane or using approximately 3 to 5N HCl in dioxane at 15-30°, and the FMOC group can be cleaved off using an approximately 5 to 50% solution of dimethylamine, diethylamine or piperidine in DMF at 15-30°.

Protecting groups which can be removed hydrogenolytically (for example CBZ, benzyl or the liberation of the amidino group from its oxadiazole derivative) can be cleaved off, for example, by treatment with hydrogen in the presence of a catalyst (for example a noble-metal catalyst, such as palladium, advantageously on a support, such as carbon). Suitable solvents here are those indicated above, in particular, for example, alcohols, such as methanol or ethanol, or amides, such as DMF. The hydrogenolysis is generally carried out at temperatures between about 0 and 100° and pressures between about 1 and 200 bar, preferably at 20-30° and 1-10 bar. Hydrogenolysis of the CBZ

group succeeds well, for example, on 5 to 10% Pd/C in methanol or using ammonium formate (instead of hydrogen) on Pd/C in methanol/DMF at 20-30°.

5 Examples of suitable inert solvents are hydrocarbons, such as hexane, petroleum ether, benzene, toluene or xylene; chlorinated hydrocarbons, such as trichloroethylene, 1,2-dichloroethane, tetrachloromethane, trifluoro-methylbenzene, chloroform or dichloromethane; alcohols, such as methanol,
10 ethanol, isopropanol, n-propanol, n-butanol or tert-butanol; ethers, such as diethyl ether, diisopropyl ether, tetrahydrofuran (THF) or dioxane; glycol ethers, such as ethylene glycol monomethyl or monoethyl ether or ethylene glycol dimethyl ether (diglyme); ketones, such as acetone or butanone;
15 amides, such as acetamide, dimethylacetamide, N-methylpyrrolidone (NMP) or dimethylformamide (DMF); nitriles, such as acetonitrile; sulfoxides, such as dimethyl sulfoxide (DMSO); carbon disulfide; carboxylic acids, such as formic acid or acetic acid; nitro compounds, such as nitromethane or nitrobenzene; esters, such as ethyl acetate, or mixtures of the said solvents.

20 Esters can be saponified, for example, using acetic acid or using NaOH or KOH in water, water/THF or water/dioxane, at temperatures between 0 and 100°.

25 Free amino groups can furthermore be acylated in a conventional manner using an acid chloride or anhydride or alkylated using an unsubstituted or substituted alkyl halide, or reacted with $\text{CH}_3\text{-C(=NH)-OEt}$, advantageously in
30 an inert solvent, such as dichloromethane or THF and/or in the presence of a base, such as triethylamine or pyridine, at temperatures between -60 and +30°.

Pharmaceutical salts and other forms

35 The said compounds according to the invention can be used in their final non-salt form. On the other hand, the present invention also encompasses the use

of these compounds in the form of their pharmaceutically acceptable salts, which can be derived from various organic and inorganic acids and bases by procedures known in the art. Pharmaceutically acceptable salt forms of the compounds of the formula I are for the most part prepared by conventional methods. If the compound of the formula I contains a carboxyl group, one of its suitable salts can be formed by reacting the compound with a suitable base to give the corresponding base-addition salt. Such bases are, for example, alkali metal hydroxides, including potassium hydroxide, sodium hydroxide and lithium hydroxide; alkaline earth metal hydroxides, such as barium hydroxide and calcium hydroxide; alkali metal alkoxides, for example potassium ethoxide and sodium propoxide; and various organic bases, such as piperidine, diethanolamine and N-methylglutamine. The aluminium salts of the compounds of the formula I are likewise included. In the case of certain compounds of the formula I, acid-addition salts can be formed by treating these compounds with pharmaceutically acceptable organic and inorganic acids, for example hydrogen halides, such as hydrogen chloride, hydrogen bromide or hydrogen iodide, other mineral acids and corresponding salts thereof, such as sulfate, nitrate or phosphate and the like, and alkyl- and monoarylsulfonates, such as ethanesulfonate, toluenesulfonate and benzenesulfonate, and other organic acids and corresponding salts thereof, such as acetate, trifluoroacetate, tartrate, maleate, succinate, citrate, benzoate, salicylate, ascorbate and the like. Accordingly, pharmaceutically acceptable acid-addition salts of the compounds of the formula I include the following: acetate, adipate, alginate, arginate, aspartate, benzoate, benzenesulfonate (besylate), bisulfate, bisulfite, bromide, butyrate, camphorate, camphorsulfonate, caprylate, chloride, chlorobenzoate, citrate, cyclopentanepropionate, digluconate, dihydrogenphosphate, dinitrobenzoate, dodecylsulfate, ethanesulfonate, fumarate, galacterate (from mucic acid), galacturonate, glucoheptanoate, gluconate, glutamate, glycerophosphate, hemisuccinate, hemisulfate, heptanoate, hexanoate, hippurate, hydrochloride, hydrobromide, hydroiodide, 2-hydroxyethanesulfonate, iodide, isethionate, isobutyrate, lactate, lactobionate, malate, maleate, malonate, mandelate,

metaphosphate, methanesulfonate, methylbenzoate, monohydrogenphosphate, 2-naphthalenesulfonate, nicotinate, nitrate, oxalate, oleate, palmoate, pectinate, persulfate, phenylacetate, 3-phenylpropionate, phosphate, phosphonate, phthalate, but this does not represent a restriction.

5

Furthermore, the base salts of the compounds according to the invention include aluminium, ammonium, calcium, copper, iron(III), iron(II), lithium, magnesium, manganese(III), manganese(II), potassium, sodium and zinc salts, but this is not intended to represent a restriction. Of the above-mentioned salts, preference is given to ammonium; the alkali metal salts sodium and potassium, and the alkaline earth metal salts calcium and magnesium. Salts of the compounds of the formula I which are derived from pharmaceutically acceptable organic non-toxic bases include salts of primary, secondary and tertiary amines, substituted amines, also including naturally occurring substituted amines, cyclic amines, and basic ion exchanger resins, for example arginine, betaine, caffeine, chloroprocaine, choline, N,N'-dibenzylethylenediamine (benzathine), dicyclohexylamine, diethanolamine, diethylamine, 2-diethylaminoethanol, 2-dimethylaminoethanol, ethanolamine, ethylenediamine, N-ethylmorpholine, N-ethylpiperidine, glucamine, glucosamine, histidine, hydrabamine, isopropylamine, lidocaine, lysine, meglumine, N-methyl-D-glucamine, morpholine, piperazine, piperidine, polyamine resins, procaine, purines, theobromine, triethanolamine, triethylamine, trimethylamine, tripropylamine and tris(hydroxymethyl)methylamine (tromethamine), but this is not intended to represent a restriction.

10

15

20

25

30

35

Compounds of the present invention which contain basic nitrogen-containing groups can be quaternised using agents such as (C₁-C₄)alkyl halides, for example methyl, ethyl, isopropyl and tert-butyl chloride, bromide and iodide; di(C₁-C₄)alkyl sulfates, for example dimethyl, diethyl and diamyl sulfate; (C₁₀-C₁₈)alkyl halides, for example decyl, dodecyl, lauryl, myristyl and stearyl chloride, bromide and iodide; and aryl(C₁-C₄)alkyl halides, for example benzyl

chloride and phenethyl bromide. Both water- and oil-soluble compounds according to the invention can be prepared using such salts.

5 The above-mentioned pharmaceutical salts which are preferred include acetate, trifluoroacetate, besylate, citrate, fumarate, gluconate, hemisuccinate, hippurate, hydrochloride, hydrobromide, isethionate, mandelate, meglumine, nitrate, oleate, phosphonate, pivalate, sodium phosphate, stearate, sulfate, sulfosalicylate, tartrate, thiomalate, tosylate and tromethamine, but this is not
10 intended to represent a restriction.

Particular preference is given to hydrochloride, dihydrochloride, hydrobromide, maleate, mesylate, phosphate, sulfate and succinate.

15 The acid-addition salts of basic compounds of the formula I are prepared by bringing the free base form into contact with a sufficient amount of the desired acid, causing the formation of the salt in a conventional manner. The free base can be regenerated by bringing the salt form into contact with a base
20 and isolating the free base in a conventional manner. The free base forms differ in a certain respect from the corresponding salt forms thereof with respect to certain physical properties, such as solubility in polar solvents; for the purposes of the invention, however, the salts otherwise correspond to the
25 respective free base forms thereof.

As mentioned, the pharmaceutically acceptable base-addition salts of the compounds of the formula I are formed with metals or amines, such as alkali
30 metals and alkaline earth metals or organic amines. Preferred metals are sodium, potassium, magnesium and calcium. Preferred organic amines are N,N'-dibenzylethylenediamine, chlorprocaine, choline, diethanolamine, ethylenediamine, N-methyl-D-glucamine and procaine.

35 The base-addition salts of acidic compounds according to the invention are prepared by bringing the free acid form into contact with a sufficient amount of

the desired base, causing the formation of the salt in a conventional manner. The free acid can be regenerated by bringing the salt form into contact with an acid and isolating the free acid in a conventional manner. The free acid forms differ in a certain respect from the corresponding salt forms thereof with
5 respect to certain physical properties, such as solubility in polar solvents; for the purposes of the invention, however, the salts otherwise correspond to the respective free acid forms thereof.

10 If a compound according to the invention contains more than one group which is capable of forming pharmaceutically acceptable salts of this type, the invention also encompasses multiple salts. Typical multiple salt forms include, for example, bitartrate, diacetate, difumarate, dimeglumine, diphosphate,
15 disodium and trihydrochloride, but this is not intended to represent a restriction.

With regard to that stated above, it can be seen that the expression "pharmaceutically acceptable salt" in the present connection is taken to mean an
20 active ingredient which comprises a compound of the formula I in the form of one of its salts, in particular if this salt form imparts improved pharmacokinetic properties on the active ingredient compared with the free form of the active ingredient or any other salt form of the active ingredient used earlier. The
25 pharmaceutically acceptable salt form of the active ingredient can also provide this active ingredient for the first time with a desired pharmacokinetic property which it did not have earlier and can even have a positive influence on the pharmacodynamics of this active ingredient with respect to its therapeutic
30 efficacy in the body.

Isotopes

There is furthermore intended that a compound of the formula I includes isotope-labelled forms thereof. An isotope-labelled form of a compound of the
35 formula I is identical to this compound apart from the fact that one or more atoms of the compound have been replaced by an atom or atoms having an

atomic mass or mass number which differs from the atomic mass or mass number of the atom which usually occurs naturally. Examples of isotopes which are readily commercially available and which can be incorporated into a compound of the formula I by well-known methods include isotopes of hydrogen, carbon, nitrogen, oxygen, phosphorus, fluorine and chlorine, for example ^2H , ^3H , ^{13}C , ^{14}C , ^{15}N , ^{18}O , ^{17}O , ^{31}P , ^{32}P , ^{35}S , ^{18}F and ^{36}Cl , respectively. A compound of the formula I, a prodrug, thereof or a pharmaceutically acceptable salt of either which contains one or more of the above-mentioned isotopes and/or other isotopes of other atoms is intended to be part of the present invention. An isotope-labelled compound of the formula I can be used in a number of beneficial ways. For example, an isotope-labelled compound of the formula I into which, for example, a radioisotope, such as ^3H or ^{14}C , has been incorporated is suitable for medicament and/or substrate tissue distribution assays. These radioisotopes, i.e. tritium (^3H) and carbon-14 (^{14}C), are particularly preferred owing to simple preparation and excellent detectability. Incorporation of heavier isotopes, for example deuterium (^2H), into a compound of the formula I has therapeutic advantages owing to the higher metabolic stability of this isotope-labelled compound. Higher metabolic stability translates directly into an increased in vivo half-life or lower dosages, which under most circumstances would represent a preferred embodiment of the present invention. An isotope-labelled compound of the formula I can usually be prepared by carrying out the procedures disclosed in the synthesis schemes and the related description, in the example part and in the preparation part in the present text, replacing a non-isotope-labelled reactant by a readily available isotope-labelled reactant.

Deuterium (^2H) can also be incorporated into a compound of the formula I for the purpose in order to manipulate the oxidative metabolism of the compound by way of the primary kinetic isotope effect. The primary kinetic isotope effect is a change of the rate for a chemical reaction that results from exchange of isotopic nuclei, which in turn is caused by the change in ground state energies necessary for covalent bond formation after this isotopic exchange. Exchange

of a heavier isotope usually results in a lowering of the ground state energy for a chemical bond and thus cause a reduction in the rate in rate-limiting bond breakage. If the bond breakage occurs in or in the vicinity of a saddle-point region along the coordinate of a multi-product reaction, the product distribution ratios can be altered substantially. For explanation: if deuterium is bonded to a carbon atom at a non-exchangeable position, rate differences of $k_M/k_D = 2-7$ are typical. If this rate difference is successfully applied to a compound of the formula I that is susceptible to oxidation, the profile of this compound in vivo can be drastically modified and result in improved pharmacokinetic properties.

When discovering and developing therapeutic agents, the person skilled in the art attempts to optimise pharmacokinetic parameters while retaining desirable in-vitro properties. It is reasonable to assume that many compounds with poor pharmacokinetic profiles are susceptible to oxidative metabolism. In vitro liver microsomal assays currently available provide valuable information on the course of oxidative metabolism of this type, which in turn permits the rational design of deuterated compounds of the formula I with improved stability through resistance to such oxidative metabolism. Significant improvements in the pharmacokinetic profiles of compounds of the formula I are thereby obtained, and can be expressed quantitatively in terms of increases in the in vivo half-life ($t/2$), concentration at maximum therapeutic effect (C_{max}), area under the dose response curve (AUC), and F; and in terms of reduced clearance, dose and materials costs.

The following is intended to illustrate the above: a compound of the formula I which has multiple potential sites of attack for oxidative metabolism, for example benzylic hydrogen atoms and hydrogen atoms bonded to a nitrogen atom, is prepared as a series of analogues in which various combinations of hydrogen atoms are replaced by deuterium atoms, so that some, most or all of these hydrogen atoms have been replaced by deuterium atoms. Half-life determinations enable favourable and accurate determination of the extent of the extent to which the improvement in resistance to oxidative metabolism

has improved. In this way, it is determined that the half-life of the parent compound can be extended by up to 100% as the result of deuterium-hydrogen exchange of this type.

5 Deuterium-hydrogen exchange in a compound of the formula I can also be used to achieve a favourable modification of the metabolite spectrum of the starting compound in order to diminish or eliminate undesired toxic metabolites. For example, if a toxic metabolite arises through oxidative
10 carbon-hydrogen (C-H) bond cleavage, it can reasonably be assumed that the deuterated analogue will greatly diminish or eliminate production of the unwanted metabolite, even if the particular oxidation is not a rate-determining step. Further information on the state of the art with respect to deuterium-
15 hydrogen exchange may be found, for example in Hanzlik et al., J. Org. Chem. **55**, 3992-3997, 1990, Reider et al., J. Org. Chem. **52**, 3326-3334, 1987, Foster, Adv. Drug Res. **14**, 1-40, 1985, Gillette et al, Biochemistry **33**(10) 2927-2937, 1994, and Jarman et al. Carcinogenesis **16**(4), 683-688, 1993.

20

The invention furthermore relates to medicaments comprising at least one compound of the formula I and/or pharmaceutically acceptable derivatives,
25 solvates and stereoisomers thereof, including mixtures thereof in all ratios, and optionally excipients and/or adjuvants.

Pharmaceutical formulations can be administered in the form of dosage units
30 which comprise a predetermined amount of active ingredient per dosage unit. Such a unit can comprise, for example, 0.5 mg to 1 g, preferably 1 mg to 700 mg, particularly preferably 5 mg to 100 mg, of a compound according to the invention, depending on the condition treated, the method of
administration and the age, weight and condition of the patient, or phar-
35 maceutical formulations can be administered in the form of dosage units

which comprise a predetermined amount of active ingredient per dosage unit. Preferred dosage unit formulations are those which comprise a daily dose or part-dose, as indicated above, or a corresponding fraction thereof of an active ingredient. Furthermore, pharmaceutical formulations of this type can be
5 prepared using a process which is generally known in the pharmaceutical art.

Pharmaceutical formulations can be adapted for administration via any desired suitable method, for example by oral (including buccal or sublingual),
10 rectal, nasal, topical (including buccal, sublingual or transdermal), vaginal or parenteral (including subcutaneous, intramuscular, intravenous or intradermal) methods. Such formulations can be prepared using all processes known in the pharmaceutical art by, for example, combining the active ingredient with the
15 excipient(s) or adjuvant(s).

Pharmaceutical formulations adapted for oral administration can be administered as separate units, such as, for example, capsules or tablets; powders or granules; solutions or suspensions in aqueous or non-aqueous liquids; edible
20 foams or foam foods; or oil-in-water liquid emulsions or water-in-oil liquid emulsions.

Thus, for example, in the case of oral administration in the form of a tablet or
25 capsule, the active-ingredient component can be combined with an oral, non-toxic and pharmaceutically acceptable inert excipient, such as, for example, ethanol, glycerol, water and the like. Powders are prepared by comminuting the compound to a suitable fine size and mixing it with a pharmaceutical
30 excipient comminuted in a similar manner, such as, for example, an edible carbohydrate, such as, for example, starch or mannitol. A flavour, preservative, dispersant and dye may likewise be present.

Capsules are produced by preparing a powder mixture as described above
35 and filling shaped gelatine shells therewith. Glidants and lubricants, such as, for example, highly disperse silicic acid, talc, magnesium stearate, calcium

stearate or polyethylene glycol in solid form, can be added to the powder mixture before the filling operation. A disintegrant or solubiliser, such as, for example, agar-agar, calcium carbonate or sodium carbonate, may likewise be added in order to improve the availability of the medicament after the capsule has been taken.

In addition, if desired or necessary, suitable binders, lubricants and disintegrants as well as dyes can likewise be incorporated into the mixture.

Suitable binders include starch, gelatine, natural sugars, such as, for example, glucose or beta-lactose, sweeteners made from maize, natural and synthetic rubber, such as, for example, acacia, tragacanth or sodium alginate, carboxymethylcellulose, polyethylene glycol, waxes, and the like. The lubricants used in these dosage forms include sodium oleate, sodium stearate, magnesium stearate, sodium benzoate, sodium acetate, sodium chloride and the like. The disintegrants include, without being restricted thereto, starch, methylcellulose, agar, bentonite, xanthan gum and the like. The tablets are formulated by, for example, preparing a powder mixture, granulating or dry-pressing the mixture, adding a lubricant and a disintegrant and pressing the entire mixture to give tablets. A powder mixture is prepared by mixing the compound comminuted in a suitable manner with a diluent or a base, as described above, and optionally with a binder, such as, for example, carboxymethylcellulose, an alginate, gelatine or polyvinylpyrrolidone, a dissolution retardant, such as, for example, paraffin, an absorption accelerator, such as, for example, a quaternary salt, and/or an absorbant, such as, for example, bentonite, kaolin or dicalcium phosphate. The powder mixture can be granulated by wetting it with a binder, such as, for example, syrup, starch paste, acacia mucilage or solutions of cellulose or polymer materials and pressing it through a sieve. As an alternative to granulation, the powder mixture can be run through a tableting machine, giving lumps of non-uniform shape, which are broken up to form granules. The granules can be lubricated by addition of stearic acid, a stearate salt, talc or mineral oil in order to prevent sticking to the tablet casting moulds. The lubricated mixture is then

pressed to give tablets. The compounds according to the invention can also be combined with a free-flowing inert excipient and then pressed directly to give tablets without carrying out the granulation or dry-pressing steps. A transparent or opaque protective layer consisting of a shellac sealing layer, a layer of sugar or polymer material and a gloss layer of wax may be present. Dyes can be added to these coatings in order to be able to differentiate between different dosage units.

Oral liquids, such as, for example, solution, syrups and elixirs, can be prepared in the form of dosage units so that a given quantity comprises a pre-specified amount of the compound. Syrups can be prepared by dissolving the compound in an aqueous solution with a suitable flavour, while elixirs are prepared using a non-toxic alcoholic vehicle. Suspensions can be formulated by dispersion of the compound in a non-toxic vehicle. Solubilisers and emulsifiers, such as, for example, ethoxylated isostearyl alcohols and polyoxyethylene sorbitol ethers, preservatives, flavour additives, such as, for example, peppermint oil or natural sweeteners or saccharin, or other artificial sweeteners and the like, can likewise be added.

The dosage unit formulations for oral administration can, if desired, be encapsulated in microcapsules. The formulation can also be prepared in such a way that the release is extended or retarded, such as, for example, by coating or embedding of particulate material in polymers, wax and the like.

The compounds of the formula I and salts, solvates and physiologically functional derivatives thereof can also be administered in the form of liposome delivery systems, such as, for example, small unilamellar vesicles, large unilamellar vesicles and multilamellar vesicles. Liposomes can be formed from various phospholipids, such as, for example, cholesterol, stearylamine or phosphatidylcholines.

The compounds of the formula I and the salts, solvates and physiologically functional derivatives thereof can also be delivered using monoclonal anti-

bodies as individual carriers to which the compound molecules are coupled. The compounds can also be coupled to soluble polymers as targeted
5 medicament carriers. Such polymers may encompass polyvinylpyrrolidone, pyran copolymer, polyhydroxypropylmethacrylamidophenol, polyhydroxy-ethylaspartamidophenol or polyethylene oxide polylysine, substituted by palmitoyl radicals. The compounds may furthermore be coupled to a class of
10 biodegradable polymers which are suitable for achieving controlled release of a medicament, for example polylactic acid, poly-epsilon-caprolactone, polyhydroxybutyric acid, polyorthoesters, polyacetals, polydihydroxypyranes, polycyanoacrylates and crosslinked or amphipathic block copolymers of
15 hydrogels.

Pharmaceutical formulations adapted for transdermal administration can be administered as independent plasters for extended, close contact with the
20 epidermis of the recipient. Thus, for example, the active ingredient can be delivered from the plaster by iontophoresis, as described in general terms in Pharmaceutical Research, 3(6), 318 (1986).

Pharmaceutical compounds adapted for topical administration can be for-
25 mulated as ointments, creams, suspensions, lotions, powders, solutions, pastes, gels, sprays, aerosols or oils.

For the treatment of the eye or other external tissue, for example mouth and
30 skin, the formulations are preferably applied as topical ointment or cream. In the case of formulation to give an ointment, the active ingredient can be employed either with a paraffinic or a water-miscible cream base.

Alternatively, the active ingredient can be formulated to give a cream with an
35 oil-in-water cream base or a water-in-oil base.

Pharmaceutical formulations adapted for topical application to the eye include eye drops, in which the active ingredient is dissolved or suspended in a suitable carrier, in particular an aqueous solvent.

5 Pharmaceutical formulations adapted for topical application in the mouth encompass lozenges, pastilles and mouthwashes.

10 Pharmaceutical formulations adapted for rectal administration can be administered in the form of suppositories or enemas.

15 Pharmaceutical formulations adapted for nasal administration in which the carrier substance is a solid comprise a coarse powder having a particle size, for example, in the range 20-500 microns, which is administered in the manner in which snuff is taken, i.e. by rapid inhalation via the nasal passages from a container containing the powder held close to the nose. Suitable formulations for administration as nasal spray or nose drops with a liquid as carrier substance encompass active-ingredient solutions in water or oil.

20 Pharmaceutical formulations adapted for administration by inhalation encompass finely particulate dusts or mists, which can be generated by various types of pressurised dispensers with aerosols, nebulisers or insufflators.

25 Pharmaceutical formulations adapted for vaginal administration can be administered as pessaries, tampons, creams, gels, pastes, foams or spray formulations.

30 Pharmaceutical formulations adapted for parenteral administration include aqueous and non-aqueous sterile injection solutions comprising antioxidants, buffers, bacteriostatics and solutes, by means of which the formulation is rendered isotonic with the blood of the recipient to be treated; and aqueous
35 and non-aqueous sterile suspensions, which may comprise suspension media and thickeners. The formulations can be administered in single-dose or

multidose containers, for example sealed ampoules and vials, and stored in freeze-dried (lyophilised) state, so that only the addition of the sterile carrier liquid, for example water for injection purposes, immediately before use is necessary. Injection solutions and suspensions prepared in accordance with the recipe can be prepared from sterile powders, granules and tablets.

It goes without saying that, in addition to the above particularly mentioned constituents, the formulations may also comprise other agents usual in the art with respect to the particular type of formulation; thus, for example, formulations which are suitable for oral administration may comprise flavours.

A therapeutically effective amount of a compound of the formula I depends on a number of factors, including, for example, the age and weight of the animal, the precise condition that requires treatment, and its severity, the nature of the formulation and the method of administration, and is ultimately determined by the treating doctor or vet. However, an effective amount of a compound according to the invention is generally in the range from 0.1 to 100 mg/kg of body weight of the recipient (mammal) per day and particularly typically in the range from 1 to 10 mg/kg of body weight per day. Thus, the actual amount per day for an adult mammal weighing 70 kg is usually between 70 and 700 mg, where this amount can be administered as a single dose per day or usually in a series of part-doses (such as, for example, two, three, four, five or six) per day, so that the total daily dose is the same. An effective amount of a salt or solvate or of a physiologically functional derivative thereof can be determined as the fraction of the effective amount of the compound according to the invention *per se*. It can be assumed that similar doses are suitable for the treatment of other conditions mentioned above.

A combined treatment of this type can be achieved with the aid of simultaneous, consecutive or separate dispensing of the individual components of the treatment. Combination products of this type employ the compounds according to the invention.

5 The invention furthermore relates to medicaments comprising at least one compound of the formula I and/or pharmaceutically acceptable salts, solvates and stereoisomers thereof, including mixtures thereof in all ratios, and at least one further medicament active ingredient.

The invention also relates to a set (kit) consisting of separate packs of

10 (a) an effective amount of a compound of the formula I and/or pharmaceutically acceptable salts, solvates and stereoisomers thereof, including mixtures thereof in all ratios,

and

(b) an effective amount of a further medicament active ingredient.

15 The set comprises suitable containers, such as boxes, individual bottles, bags or ampoules. The set may, for example, comprise separate ampoules, each containing an effective amount of a compound of the formula I and/or pharmaceutically acceptable salts, solvates and stereoisomers thereof,

20 including mixtures thereof in all ratios,

and an effective amount of a further medicament active ingredient in dissolved or lyophilised form.

25 "Treating" as used herein, means an alleviation, in whole or in part, of symptoms associated with a disorder or disease, or slowing, or halting of further progression or worsening of those symptoms, or prevention or prophylaxis of the disease or disorder in a subject at risk for developing the

30 disease or disorder.

The term "effective amount" in connection with a compound of formula (I) can mean an amount capable of alleviating, in whole or in part, symptoms associated with a disorder or disease, or slowing or halting further progression

35 or worsening of those symptoms, or preventing or providing prophylaxis for the disease or disorder in a subject having or at risk for developing a disease

disclosed herein, such as inflammatory conditions, immunological conditions, cancer or metabolic conditions.

5 In one embodiment an effective amount of a compound of formula (I) is an amount that inhibits a tankyrase in a cell, such as, for example, in vitro or in vivo. In some embodiments, the effective amount of the compound of formula (I) inhibits tankyrase in a cell by 10%, 20%, 30%, 40%, 50%, 60%, 70%, 80%, 90% or 99%, compared to the activity of tankyrase in an untreated cell. The
10 effective amount of the compound of formula (I), for example in a pharmaceutical composition, may be at a level that will exercise the desired effect; for example, about 0.005 mg/kg of a subject's body weight to about 10 mg/kg of a subject's body weight in unit dosage for both oral and parenteral administration.

15

USE

The present compounds are suitable as pharmaceutical active ingredients for
20 mammals, especially for humans, in the treatment of cancer, multiple sclerosis, cardiovascular diseases, central nervous system injury and different forms of inflammation.

25 The present invention encompasses the use of the compounds of the formula I and/or physiologically acceptable salts and solvates thereof for the preparation of a medicament for the treatment or prevention of cancer, multiple sclerosis, cardiovascular diseases, central nervous system injury and different forms of inflammation.

30

Examples of inflammatory diseases include rheumatoid arthritis, psoriasis, contact dermatitis, delayed hypersensitivity reaction and the like.

35 Also encompassed is the use of the compounds of the formula I and/or physiologically acceptable salts and solvates thereof for the preparation of a

medicament for the treatment or prevention of a tankyrase-induced disease or a tankyrase-induced condition in a mammal, in which to this method a therapeutically effective amount of a compound according to the invention is administered to a sick mammal in need of such treatment. The therapeutic
5 amount varies according to the specific disease and can be determined by the person skilled in the art without undue effort.

The expression "tankyrase-induced diseases or conditions" refers to pathological conditions that depend on the activity of one or more tankyrases.
10 Diseases associated with tankyrase activity include cancer, multiple sclerosis, cardiovascular diseases, central nervous system injury and different forms of inflammation.

15 The present invention specifically relates to compounds of the formula I and pharmaceutically acceptable salts, solvates, tautomers and stereoisomers thereof, including mixtures thereof in all ratios,
for the use for the treatment of diseases in which the inhibition, regulation
20 and/or modulation inhibition of tankyrase plays a role.

The present invention specifically relates to compounds of the formula I and pharmaceutically acceptable salts, solvates, tautomers and stereoisomers
25 thereof, including mixtures thereof in all ratios, for the use for the inhibition of tankyrase.

30 The present invention specifically relates to compounds of the formula I and pharmaceutically acceptable salts, solvates, tautomers and stereoisomers thereof, including mixtures thereof in all ratios, for the use for the treatment of cancer, multiple sclerosis, cardiovascular diseases, central nervous system injury and different forms of inflammation.

35

5 The present invention specifically relates to methods for treating or preventing cancer, multiple sclerosis, cardiovascular diseases, central nervous system injury and different forms of inflammation, comprising administering to a subject in need thereof an effective amount of a compound of formula I or a pharmaceutically acceptable salt, tautomer, stereoisomer or solvate thereof.

10 Representative cancers that compounds of formula I are useful for treating or preventing include, but are not limited to, cancer of the head, neck, eye, mouth, throat, esophagus, bronchus, larynx, pharynx, chest, bone, lung, colon, rectum, stomach, prostate, urinary bladder, uterine, cervix, breast, ovaries, testicles or other reproductive organs, skin, thyroid, blood, lymph nodes, kidney, liver, pancreas, brain, central nervous system, solid tumors and blood-borne tumors.

15 Representative cardiovascular diseases that compounds of formula I are useful for treating or preventing include, but are not limited to, restenosis, atherosclerosis and its consequences such as stroke, myocardial infarction, ischemic damage to the heart, lung, gut, kidney, liver, pancreas, spleen or
20 brain.

The present invention relates to a method of treating a proliferative, autoimmune, anti inflammatory or infectious disease disorder that comprises administering to a subject in need thereof a therapeutically effective amount of
25 a compound of formula I.

Preferably, the present invention relates to a method wherein the disease is a cancer.

30 Particularly preferable, the present invention relates to a method wherein the disease is a cancer, wherein administration is simultaneous, sequential or in alternation with administration of at least one other active drug agent.

The disclosed compounds of the formula I can be administered in combination with other known therapeutic agents, including anticancer agents. As used
35 here, the term "anticancer agent" relates to any agent which is administered to a patient with cancer for the purposes of treating the cancer.

The anti-cancer treatment defined herein may be applied as a sole therapy or may involve, in addition to the compound of the invention, conventional surgery or radiotherapy or chemotherapy. Such chemotherapy may include

one or more of the following categories of anti- tumour agents:

(i) antiproliferative/antineoplastic/DNA-damaging agents and combinations thereof, as used in medical oncology, such as alkylating agents (for example cis-platin, carboplatin, cyclophosphamide, nitrogen mustard, melphalan, chloroambucil, busulphan and nitrosoureas); antimetabolites (for example antifolates such as fluoropyrimidines like 5-fluorouracil and tegafur, raltitrexed, methotrexate, cytosine arabinoside, hydroxyurea and gemcitabine); antitumour antibiotics (for example anthracyclines, like adriamycin, bleomycin, doxorubicin, daunomycin, epirubicin, idarubicin, mitomycin-C, dactinomycin and mithramycin) ; antimitotic agents (for example vinca alkaloids, like vincristine, vinblastine, vindesine and vinorelbine, and taxoids, like taxol and taxotere) ; topoisomerase inhibitors (for example epipodophyllotoxins, like etoposide and teniposide, amsacrine, topotecan, irinotecan and camptothecin) and cell-differentiating agents (for example all-trans-retinoic acid, 13-cis-retinoic acid and fenretinide);

(ii) cytostatic agents, such as antioestrogens (for example tamoxifen, toremifene, raloxifene, droloxifene and idoxifene), oestrogen receptor downregulators (for example fulvestrant), antiandrogens (for example bicalutamide, flutamide, nilutamide and cyproterone acetate), LHRH antagonists or LHRH agonists (for example goserelin, leuprorelin and buserelin), progesterones (for example megestrol acetate), aromatase inhibitors (for example as anastrozole, letrozole, vorazole and exemestane) and inhibitors of 5 α -reductase, such as finasteride;

(iii) agents which inhibit cancer cell invasion (for example metallo-proteinase inhibitors, like marimastat, and inhibitors of urokinase plasminogen activator receptor function);

- (iv) inhibitors of growth factor function, for example such inhibitors include growth factor antibodies, growth factor receptor antibodies (for example the anti-erb2 antibody trastuzumab [HerceptinTM] and the anti-erb1 antibody cetuximab [C225]), farnesyl transferase inhibitors, tyrosine kinase inhibitors
5 and serine/threonine kinase inhibitors, for example inhibitors of the epidermal growth factor family (for example EGFR family tyrosine kinase inhibitors, such as N-(3-chloro-4-fluorophenyl)-7-methoxy-6-(3-morpholinopropoxy)quinazolin-4-amine (gefitinib, AZD1839), N-(3-ethynylphenyl)-6,7-bis (2-methoxyethoxy)quinazolin-4-amine (erlotinib, OSI-774) and 6-acrylamido-N-(3-chloro-4-fluorophenyl)-7-(3-morpholinopropoxy)quinazolin-4-amine (CI 1033)
10), for example inhibitors of the platelet-derived growth factor family and for example inhibitors of the hepatocyte growth factor family;
- (v) antiangiogenic agents, such as those which inhibit the effects of vascular endothelial growth factor, (for example the anti-vascular endothelial cell growth factor antibody bevacizumab [AvastinTM], compounds such as those disclosed in published international patent applications WO 97/22596,
15 WO 97/30035, WO 97/32856 and WO 98/13354) and compounds that work by other mechanisms (for example linomide, inhibitors of integrin $\alpha v \beta 3$ function and angiostatin);
- (vi) vessel-damaging agents, such as combretastatin A4 and compounds disclosed in international patent applications WO 99/02166, WO 00/40529,
20 WO 00/41669, WO 01/92224, WO 02/04434 and WO 02/08213;
- (vii) antisense therapies, for example those which are directed to the targets listed above, such as ISIS 2503, an anti-Ras antisense;
- (viii) gene therapy approaches, including, for example, approaches for replacement of aberrant genes, such as aberrant p53 or aberrant BRCA1 or
30 BRCA2, GDEPT (gene-directed enzyme pro-drug therapy) approaches, such as those using cytosine deaminase, thymidine kinase or a bacterial nitroreductase enzyme, and approaches for increasing patient tolerance to chemotherapy or radiotherapy, such as multi-drug resistance gene therapy;
35 and

(ix) immunotherapy approaches, including, for example, ex-vivo and in-vivo approaches for increasing the immunogenicity of patient tumour cells, such as transfection with cytokines, such as interleukin 2, interleukin 4 or granulocyte-macrophage colony stimulating factor, approaches for decreasing T-cell anergy, approaches using transfected immune cells, such as cytokine-transfected dendritic cells, approaches using cytokine-transfected tumour cell lines, and approaches using anti-idiotypic antibodies.

The medicaments from Table 1 below are preferably, but not exclusively, combined with the compounds of the formula I.

Description of the in vitro assays

Abbreviations:

GST = Glutathione-S-transferase

5 FRET= Fluorescence resonance energy transfer

HTRF® = (homogenous time resolved fluorescence)

HEPES = 4-(2-hydroxyethyl)-1-piperazine ethanesulfonic acid buffer

10 DTT = Dithiothreitol

BSA = bovine serum albumin

CHAPS = detergent;

15 CHAPS = 3-[(3-cholamidopropyl)dimethylammonio]-1-propanesulfonate

Streptavidin-XLent® is a high grade streptavidin-XL665 conjugate for which the coupling conditions have been optimized to yield a conjugate with enhanced performances for some assays, particularly those requiring high sensitivity.

20

Biochemical activity testing of Tankyrase 1 and 2: Autoparsylation assay

25 The autoparsylation assay is run in two steps: the enzymatic reaction in which GST-tagged Tankyrase-1, resp Tankyrase-2 transferred biotinylated ADP-ribose to itself from biotinylated NAD as co-substrate and the detection reaction where a time resolved FRET between cryptate labelled anti-GST bound to the GST tag of the enzyme and Xlent® labelled-streptavidin bound the biotin-parsylation residue is analysed. The autoparsylation activity was detectable directly via the increase in HTRF signal.

30

The autoparsylation assay is performed as 384-well HTRF® (Cisbio, Codolet, France) assay format in Greiner low volume nb 384-well microtiter plates and is used for high throughput screen. 250 nM GST-tagged Tankyrase-1 (1023-1327 aa), respectively about 250 nM GST-tagged Tankyrase-2 (873-1166 aa)

35

and 5 μ M bio-NAD (Biolog, Life science Inst., Bremen, Germany) as co-substrate are incubated in a total volume of 5 μ l (50 mM HEPES, 4 mM Mg-chloride, 0.05 % Pluronic F-68, 1.4 mM DTT, 0.5 % DMSO, pH 7.7) in the absence or presence of the test compound (10 dilution concentrations) for 90 min at 30°C. The reaction is stopped by the addition of 1 μ l 50 mM EDTA solution. 2 μ l of the detection solution (1.6 μ M SA-Xlent® (Cisbio, Codolet, France), 7.4 nM Anti-GST-K® (Eu-labelled anti-GST, Cisbio, Codolet, France) in 50 mM HEPES, 800 mM KF, 0.1 % BSA, 20 mM EDTA, 0.1 % CHAPS, pH 7.0) are added. After 1h incubation at room temperature the HTRF is measured with an Envision multimode reader (Perkin Elmer LAS Germany GmbH) at excitation wavelength 340 nm (laser mode) and emission wavelengths 615 nm and 665 nm. The ratio of the emission signals is determined. The full value used is the inhibitor-free reaction. The pharmacological zero value used is XAV-939 (Tocris) in a final concentration of 5 μ M. The inhibitory values (IC₅₀) are determined using either the program Symyx Assay Explorer® or Condosseo® from GeneData.

Measurement of cellular inhibition of tankyrase

Since Tankyrases have been described to modulate cellular level of Axin2 (Huang et al., 2009; Nature) the increase of Axin2 level is used as read-out for determination of cellular inhibition of Tankyrases in a Luminex based assay.

Cells of the colon carcinoma cell line DLD1 are plated in 96 well plates with 1.5×10^4 cells per well. Next day, cells are treated with a serial dilution of test compound in seven steps as triplicates with a final DMSO concentration of 0.3%. After 24 hours, cells are lysed in lysis buffer (20mM Tris/HCl pH 8.0, 150 mM NaCl, 1% NP40, 10% Glycerol) and lysates are cleared by centrifugation through a 96 well filter plate (0.65 μ m). Axin2 protein is isolated from cell lysates by incubation with a monoclonal anti-Axin2 antibody (R&D Systems #MAB6078) that is bound to fluorescent carboxybeads. Then, bound Axin2 is specifically detected with a polyclonal anti-Axin2 antibody (Cell Signaling #2151) and an appropriate PE-fluorescent secondary antibody. The

amount of isolated Axin2 protein is determined in a Luminex²⁰⁰ machine (Luminex Corporation) according to the manufacturer's instruction by counting 100 events per well. Inhibition of Tankyrase by test compounds results in higher levels of Axin2 which directly correlates with an increase of detectable fluorescence. As controls cells are treated with solvent alone (neutral control) and with a Tankyrase reference inhibitor IWR-2 (3E-06 M) which refers as control for maximum increase of Axin2. For analysis, the obtained data are normalized against the untreated solvent control and fitted for determination of the EC₅₀ values using the Assay Explorer software (Accelrys).

Description of the PARP1 assay

Biochemical activity testing of PARP-1: Autoparsylation assay

The autoparsylation assay is run in two steps: the enzymatic reaction in which His-tagged Parp-1 transfers biotinylated ADP-ribose/ADP-ribose to itself from biotinylated NAD/NAD as co-substrate and the detection reaction where a time resolved FRET between cryptate labelled anti-His antibody bound to the His tag of the enzyme and Xlent® labelled-streptavidin bound the biotin-parsylation residue is analysed. The autoparsylation activity is detectable directly via the increase in HTRF signal.

The autoparsylation assay is performed as 384-well HTRF® (Cisbio, Codolet, France) assay format in Greiner low volume nb 384-well microtiter plates. 35 nM His-tagged Parp-1 (human, recombinant, Enzo Life Sciences GmbH, Lörrach, Germany) and a mixture of 125 nM bio-NAD (Biolog, Life science Inst., Bremen, Germany) and 800 nM NAD as co-substrate are incubated in a total volume of 6 µl (100 mM Tris/HCl, 4 mM Mg-chloride, 0.01 % IGEPAL® CA630, 1mM DTT , 0.5 % DMSO, pH 8, 13 ng/µl activated DNA (BPS Bioscience, San Diego, US)) in the absence or presence of the test compound (10 dilution concentrations) for 150 min at 23°C. The reaction is stopped by the addition of 4 µl of the Stop/detection solution (70 nM SA-Xlent® (Cisbio, Codolet, France), 2.5 nM Anti-His-K® (Eu-labelled anti-His, Cisbio, Codolet, France) in 50 mM HEPES, 400 mM KF, 0.1 % BSA, 20 mM

EDTA, pH 7.0). After 1h incubation at room temperature the HTRF is measured with an Envision multimode reader (Perkin Elmer LAS Germany GmbH) at excitation wavelength 340 nm (laser mode) and emission wavelengths 615 nm and 665 nm. The ratio of the emission signals is determined. The full value used is the inhibitor-free reaction. The pharmacological zero value used is Olaparib (LClabs, Woburn, US) in a final concentration of 1 μ M. The inhibitory values (IC₅₀) are determined using either the program Symyx Assay Explorer® or Condosseo® from GeneData.

Description of the TNKS1 and TNKS2 ELISA assay

Biochemical activity testing of TNKS 1 and 2: activity ELISA (Autoparsylation assay)

For analysis of autoparsylation activity of TNKS 1 and 2 an activity ELISA is performed: In the first step GST tagged TNKS is captured on a Glutathione coated plate. Then the activity assay with biotinylated NAD is performed in the absence/presence of the compounds. During the enzymatic reaction GST tagged TNKS transfers biotinylated ADP-ribose to itself from biotinylated NAD as co-substrate. For the detection streptavidin-HRP conjugate is added that binds to the biotinylated TNKS and is thereby captured to the plates. The amount of biotinylated resp. autoparsylated TNKS is detected with a luminescence substrate for HRP. The level of the luminescence signal correlates directly with the amount of autoparsylated TNKS and therefore with activity of TNKS.

The activity ELISA is performed in 384 well Glutathione coated microtiter plates (Express capture Glutathione coated plate, Biocat, Heidelberg, Germany). The plates are pre-equilibrated with PBS. Then the plates are incubated with 50 μ l 20 ng/well GST-tagged Tnks-1 (1023-1327 aa, prepared in-house), respectively GST-tagged Tnks-2 (873-1166 aa, prepared in-house) in assay buffer (50 mM HEPES, 4 mM Mg-chloride, 0.05 % Pluronic F-68, 2 mM DTT, pH 7.7) overnight at 4°C. The plates are washed 3 times with PBS-

Tween-20. The wells are blocked by incubation at room temperature for 20 minutes with 50 µl blocking buffer (PBS, 0.05 % Tween-20, 0.5 % BSA). Afterwards the plates are washed 3 times with PBS-Tween-20. The enzymatic reaction is performed in 50 µl reaction solution (50 mM HEPES, 4 mM Mg-chloride, 0.05 % Pluronic F-68, 1.4 mM DTT, 0.5 % DMSO, pH 7.7) with 10 µM bio-NAD (Biolog, Life science Inst., Bremen, Germany) as co-substrate in the absence or presence of the test compound (10 dilution concentrations) for 1 hour at 30°C. The reaction is stopped by 3 times washing with PBS-Tween-20. For the detection 50 µl of 20ng/µl Streptavidin, HRP conjugate (MoBiTec, Göttingen, Germany) in PBS/0.05%Tween-20/0.01%BSA are added and the plates are incubated for 30 minutes at room temperature. After three times washing with PBS-Tween-20 50 µl of SuperSignal ELISA Femto Maximum sensitivity substrate solution (ThermoFisherScientific (Pierce), Bonn, Germany) are added. Following a 1minute incubation at room temperature luminescence signals are measured with an Envision multimode reader (Perkin Elmer LAS Germany GmbH) at 700 nm. The full value used is the inhibitor-free reaction. The pharmacological zero value used is XAV-939 (Tocris) in a final concentration of 5 µM. The inhibitory values (IC₅₀) are determined using either the program Symyx Assay Explorer® or Condosseo® from GeneData.

Above and below, all temperatures are indicated in°C. In the following examples, "conventional work-up" means: water is added if necessary, the pH is adjusted, if necessary, to values between 2 and 10, depending on the constitution of the end product, the mixture is extracted with ethyl acetate or dichloromethane, the phases are separated, the organic phase is dried over sodium sulfate and evaporated, and the residue is purified by chromatography on silica gel and/or by crystallisation. R_f values on silica gel; eluent: ethyl acetate/methanol 9:1.

30

¹H NMR was recorded on Bruker DPX-300, DRX-400 or AVII-400

spectrometer, using residual signal of deuterated solvent as internal reference. Chemical shifts (δ) are reported in ppm relative to the residual

solvent signal (δ = 2.49 ppm for ¹H NMR in DMSO-d₆). ¹H NMR data are

reported as follows: chemical shift (multiplicity, coupling constants, and

35

number of hydrogens). Multiplicity is abbreviated as follows: s (singlet), d (doublet), t (triplet), q (quartet), m (multiplet), br (broad).

The microwave chemistry is performed on a single mode microwave reactor Emrys™ Optimiser from Personal Chemistry.

Example 1

Synthesis of 3-(4-benzyloxy-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one ("A1")

10

15

20

25

A suspension of 200 mg (1.60 mmol) 1H-pyrrole-2-carboxylic acid methyl ester and 1.56 g (4.79 mmol) cesium carbonate in 3 ml DMF is heated to 50°C under stirring. Then a solution of 488 mg (1.60 mmol) 1-(4-benzyloxy-phenyl)-2-bromo-ethanone in 1 ml DMF is added within 3 minutes. The reaction mixture is stirred for 18 hours at 50°C . The reaction mixture is filtered with suction and the filtrate is evaporated. The residue is crystallized from diethyl ether to give 1-[2-(4-benzyloxy-phenyl)-2-oxo-ethyl]-1H-pyrrole-2-carboxylic acid methyl ester as beige crystals; HPLC/MS 2.51 min (A), $[\text{M}+\text{H}]$ 350.

30

35

A suspension of 100 mg (0.286 mmol) 1-[2-(4-benzyloxy-phenyl)-2-oxo-ethyl]-1H-pyrrole-2-carboxylic acid methyl ester in a 7 M solution of ammonia in methanol is irradiated in a microwave apparatus at 90°C for 18 h. The reaction mixture is cooled to room temperature and evaporated. The residue is chromatographed on a silica gel column with petrolether/ethylacetate as

eluent to give 3-(4-benzyloxy-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one as beige crystals; HPLC/MS 2.26 min (A), [M+H] 317.

Analogously, the following compounds are obtained

35

A solution of 849 mg (4.00 mmol) diethyl pyrazole-3,5-dicarboxylate and 1.02 g (4.00 mmol) 2-bromo-1-(4-tert-butyl-phenyl)-ethanone in 4 ml acetone is

5 treated with 663 mg (4.80 mmol) potassium carbonate. The resulting suspension is stirred overnight at room temperature. The reaction mixture is partitioned between water and dichloromethane. The organic phase is dried over sodium sulfate and evaporated to give 1-[2-(4-tert-butyl-phenyl)-2-oxo-ethyl]-1H-pyrazole-3,5-dicarboxylic acid diethyl ester as light yellow foam; HPLC/MS 2.77 (A), [M+H] 387.

10 A solution of 1.04 g (2.71 mmol) 1-[2-(4-tert-butyl-phenyl)-2-oxo-ethyl]-1H-pyrazole-3,5-dicarboxylic acid diethyl ester and 2.08 g (27.1 mmol) ammonium acetate in 20 ml acetic acid is stirred for 44 hours at 110° C. The reaction mixture is cooled to room temperature and excess water is added. The resulting precipitate is filtered off, and washed with water. The residue is
15 chromatographed on a silica gel column with dichloromethane/methanol as eluent to give 6-(4-tert-butyl-phenyl)-4-oxo-4,5-dihydro-pyrazolo[1,5-a]pyrazine-2-carboxylic acid ethyl ester as colourless crystals; HPLC/MS 2.41 (A), [M+H] 340.

20 A solution of 547 mg (1.61 mmol) 6-(4-tert-butyl-phenyl)-4-oxo-4,5-dihydro-pyrazolo[1,5-a]pyrazine-2-carboxylic acid ethyl ester in 10 ml 1,2-dimethoxyethane is treated with 5 ml 1 N aqueous NaOH solution. The resulting suspension is heated to 100° C and the resulting solution is stirred at
25 this temperature for 48 hours. The reaction mixture is cooled to room temperature and evaporated. The residue is triturated with water and the solids are filtered off and washed with water. The filtrate is acidified with 2 N HCl. The resulting precipitate is filtered off, washed with 2 N HCl and with
30 water and dried under vacuum to give 6-(4-tert-butyl-phenyl)-4-oxo-4,5-dihydro-pyrazolo[1,5-a]pyrazine-2-carboxylic acid as colourless solid; HPLC/MS 2.03 (A), [M+H] 312.

35 28.9 mg (0.454 mmol) Copper powder is added to a solution of 70.7 mg (0.227 mmol) 6-(4-tert-butyl-phenyl)-4-oxo-4,5-dihydro-pyrazolo[1,5-a]pyrazine-2-carboxylic acid in 2 ml quinoline. The mixture is stirred at 190° C

for 20 hours. Quinoline is distilled off under vacuum and the residue is chromatographed on a silica gel column with cyclohexane/ethyl acetate as eluent to give 6-(4-tert-butyl-phenyl)-5H-pyrazolo[1,5-a]pyrazin-4-one as colourless crystals; HPLC/MS: 1.88 (C), [M+H] 268;

¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 11.49 (s, 1H), 8.03 (s, 1H), 7.92 (d, J=2.2, 1H), 7.69 (d, J=8.5, 2H), 7.49 (d, J=8.6, 2H), 7.01 (d, J=1.6, 1H), 1.32 (s, 9H).

Analogously, the following compounds are obtained

compound nr.	name and/or structure
"A16"	<p>6-(4-trifluoromethoxy-phenyl)-5H-pyrazolo[1,5-a]pyrazin-4-one</p>  <p>HPLC/MS 1.76 min (C), [M+H] 296;</p>
"A17"	<p>6-(4-Pyrrolidin-1-yl-phenyl)-5H-pyrazolo[1,5-a]pyrazin-4-one</p>  <p>HPLC/MS 2.47 min (B), [M+H] 281;</p>

Example 4

Synthesis of 6-(4-tert-butyl-phenyl)-2-hydroxymethyl-5H-pyrazolo[1,5-a]pyrazin-4-one ("A18") and alternative synthesis of "A15"

Under nitrogen, 43.4 mg (1.14 mmol) lithiumaluminiumhydride is added to a solution of 194 mg (0.571 mmol) 6-(4-tert-butyl-phenyl)-4-oxo-4,5-dihydro-pyrazolo[1,5-a]pyrazine-2-carboxylic acid ethyl ester (for preparation see previous example) in 20 ml THF. The reaction mixture is stirred at ambient temperature for two hours. A few drops of methanol and then 2 ml 2 N aqueous HCl solution are added slowly to the reaction mixture. It is then filtered over a pad of celite. The filtrate is evaporated and the residue is chromatographed on a silica gel column with cyclohexane/ethyl acetate as eluent to give 6-(4-tert-butyl-phenyl)-2-hydroxymethyl-5H-pyrazolo[1,5-a]pyrazin-4-one ("A18") as white powder; HPLC/MS: 1.72 (C), [M+H] 298; ¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 11.46 (s, 1H), 7.94 (s, 1H), 7.67 (d, J=8.5, 2H), 7.49 (d, J=8.5, 2H), 6.91 (s, 1H), 5.28 (bs, 1H), 4.59 (s, 2H), 1.31 (s, 9H).

Analogously, the following compounds are obtained

compound nr.	name and/or structure
"A19"	2-hydroxymethyl-6-(4-pyrrolidin-1-yl-phenyl)-5H-pyrazolo[1,5-a]pyrazin-4-one

5

HPLC/MS 2.20 min (B), [M+H] 311;

"A20"

599 mg (1.41 mmol) Dess-Martin periodinane is added to a solution of 140 mg (0.471 mmol) 6-(4-tert-butyl-phenyl)-2-hydroxymethyl-5H-pyrazolo[1,5-a]pyrazin-4-one in 5 ml dichloromethane and 1 ml DMF. The reaction mixture is stirred at ambient temperature for 18 hours. The reaction mixture is filtered and the filtrate is washed with saturated sodium thiosulfate solution and with saturated sodium hydrogen carbonate solution. The organic phase is dried over sodium sulfate and evaporated. The residue is triturated with tert-butylmethylether, the solid is filtered off and dried under vacuum to give 6-(4-tert-butyl-phenyl)-4-oxo-4,5-dihydro-pyrazolo[1,5-a]pyrazine-2-carbaldehyde as light yellow crystals; HPLC/MS: 1.93 (C), [M+H]⁺ 296.

140 mg (0.473 mmol) 6-(4-tert-butyl-phenyl)-4-oxo-4,5-dihydro-pyrazolo[1,5-a]pyrazine-2-carbaldehyde are dissolved in 1 ml diethyleneglycol-dimethylether. 12 mg (0.028 mmol) 3-diphenylphosphanylpropyl(diphenyl)-phosphane and 3.7 mg (0.014 mmol) rhodium(III)-chloride trihydrate are added. The reaction mixture is stirred for 42 hours at 160° C. The mixture is cooled to room temperature and partitioned between dichloromethane and water. The organic phase is dried over sodium sulfate and evaporated. The

residue is chromatographed on a silica gel column with cyclohexane/ethyl acetate as eluent to give give 6-(4-tert-butyl-phenyl)-5H-pyrazolo[1,5-a]pyrazin-4-one ("A15") as colourless crystals; HPLC/MS: 1.88 (C), [M+H]
268.

Synthesis of 3-(4-bromo-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one ("A24")

15

20

25

30

5.53 g (40.0 mmol) Potassium carbonate is added to a solution of 1.70 ml (20.0 mmol) pyrrole-2-carbonitrile and 8.34 g (30.0 mmol) 2,4'-dibromoacetophenone in 40 ml DMF. The resulting suspension is stirred for 1 hour at room temperature. The reaction mixture is diluted with dichloromethane and filtered with suction. The residue is washed with dichloromethane. The filtrate

35

is evaporated and the residue is chromatographed on a silica gel column with cyclohexane/ethyl acetate as eluent to give 1-[2-(4-bromo-phenyl)-2-oxo-ethyl]-1H-pyrrole-2-carbonitrile as light orange solid; HPLC/MS 2.80 (B), [M+H] 289/291.

5

3.36 g (11.6 mmol) 1-[2-(4-bromo-phenyl)-2-oxo-ethyl]-1H-pyrrole-2-carbonitrile and 3.95 g (11.6 mmol) tetrabutylammonium hydrogensulfate are dissolved in 23 ml dichloromethane. 12.3 ml (121 mmol) aqueous hydrogen peroxide solution (30% by weight) and then 4.63 ml (50.0 mmol) aqueous sodium hydroxide solution (32% by weight) are added slowly under stirring. The reaction mixture is stirred at ambient temperature for 90 minutes and then partitioned between water and dichloromethane. The organic phase is dried over sodium sulfate and evaporated. The residue is chromatographed on a silica gel column with cyclohexane/ethyl acetate to give two products:

3-(4-bromo-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one; white powder; HPLC/MS 2.42 (B), [M+H] 289/291; ¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 10.80 (s, 1H), 7.78 (s, 1H), 7.64 (m, 4H), 7.46 (m, 1H), 6.92 (d, J=3.3, 1H), 6.58 (dd, J=3.8, 2.6, 1H).

3-(4-bromo-phenyl)-3-hydroxy-3,4-dihydro-2H-pyrrolo[1,2-a]pyrazin-1-one; white powder; HPLC/MS 2.17 (B), [M+H] 307/309; ¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 8.30 (s, 1H), 7.58 (m, 4H), 6.95 (s, 1H), 6.70 (d, J=2.3, 1H), 6.67 (s, 1H), 6.16 (m, 1H), 4.15 (m, 2H).

10

15

Example 7

10

Synthesis of 4-(1-oxo-1,2-dihydro-pyrrolo[1,2-a]pyrazin-3-yl)-benzoic acid methyl ester ("A28") and 3-[4-(1-hydroxy-1-methyl-ethyl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one ("A29")

15

20

In an autoclave, a solution of 285 mg (0.986 mmol) 3-(4-bromo-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one and 157 mg (1.55 mmol) triethylamine in 6 ml methanol and 6 ml toluene is flushed with nitrogen. 24 mg (0.029 mmol) (1,1'-bis(diphenylphosphino)-ferrocene)dichloropalladium(II) and 22 mg (0.040 mmol) 1,1-bis-(diphenylphosphino)-ferrocene are added. Then the autoclave is filled with carbon monoxide and heated to 100°C. The autoclave is kept at this temperature for 16 hours with a carbon monoxide pressure of 2 – 4 bar. The autoclave is brought to atmospheric pressure. The solids are filtered off; the residue is washed with methanol and tert-butylmethylether and dried under vacuum to give 4-(1-oxo-1,2-dihydro-pyrrolo[1,2-a]pyrazin-3-yl)-benzoic acid methyl ester as pale yellow-white solid; HPLC/MS 1.83 min (A), [M+H] 269;

30

35

¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 11.02 (s, 1H), 8.17 (d, J=8.4, 2H), 8.07 (s, 1H), 7.99 (d, J=8.4, 2H), 7.64 (s, 1H), 7.10 (d, J=3.6, 1H), 6.76 (m, 1H), 4.03 (s, 3H).

To a suspension of 99.0 mg (0.369 mmol) 4-(1-oxo-1,2-dihydro-pyrrolo[1,2-a]pyrazin-3-yl)-benzoic acid methyl ester in 1.5 ml THF, 100 mg (0.406 mmol) cerium(III) chloride is added and the mixture is stirred for 1 h at ambient temperature under argon. Then 517 μ l (1.55 mmol) of a 3 M solution of methylmagnesium chloride in THF is added and the reaction mixture is stirred for 1 hour at room temperature. The reaction mixture is treated with water and partitioned between 10% aqueous citric acid solution and ethylacetate. The organic phase is dried over sodium sulfate and evaporated. The residue is purified by preparative HPLC. The product containing fractions are evaporated and partitioned between saturated sodium hydrogen carbonate solution and ethylacetate. The organic phase is dried over sodium sulfate and evaporated to give 3-[4-(1-hydroxy-1-methyl-ethyl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one as white solid; HPLC/MS 1.67 min (A), [M+H] 269; ^1H NMR (400 MHz, DMSO- d_6) δ [ppm] 10.69 (s, 1H), 7.70 (s, 1H), 7.60 (d, $J=8.4$, 2H), 7.53 (d, $J=8.4$, 2H), 7.45 (s, 1H), 6.90 (d, $J=3.5$, 1H), 6.57 (m, 1H), 5.05 (s, 1H), 1.45 (s, 6H).

Analogously, the following compounds are obtained

6-[4-(1-hydroxy-1-methyl-ethyl)phenyl]-2-methyl-5H-pyrazolo[1,5-a]pyrazin-4-one ("A46")

HPLC/MS 1.69 min (C), [M+H] 284;

6-[4-(1-hydroxy-1-methyl-ethyl)phenyl]-5H-pyrazolo[1,5-a]pyrazin-4-one ("A47")

Example 8

Synthesis of 6-(4-tert-butyl-phenyl)-2-methyl-5H-pyrazolo[1,5-a]pyrazin-4-one ("A30")

25

30

35

A solution of 463 mg (3.00 mmol) 5-methyl-2H-pyrazole-3-carboxylic acid ethyl ester and 765 mg (3.00 mmol) 2-bromo-1-(4-tert-butyl-phenyl)-ethanone in 4 ml acetone is treated with 498 mg (3.60 mmol) potassium carbonate. The resulting suspension is stirred overnight at room temperature. The reaction mixture is evaporated to dryness and the residue is partitioned between water and dichloromethane. The organic phase is dried over sodium sulfate and evaporated to give a mixture of two isomers as brown resin, which is used as such in the next step:

2-[2-(4-tert-butyl-phenyl)-2-oxo-ethyl]-5-methyl-2H-pyrazole-3-carboxylic acid ethyl ester; HPLC/MS 3.25 min (B), [M+H] 329;
1-[2-(4-tert-butyl-phenyl)-2-oxo-ethyl]-5-methyl-1H-pyrazole-3-carboxylic acid ethyl ester; HPLC/MS 3.05 min (B), [M+H] 329.

The crude product obtained in the previous step is dissolved in 5 ml glacial acetic acid, 1.99 g (25.8 mmol) ammonium acetate is added and the resulting suspension is stirred for 6 hours at 110° C. The reaction mixture is allowed to cool to room temperature and partitioned between water and dichloromethane. The organic phase is dried over sodium sulfate and evaporated. The residue is chromatographed by preparative HPLC to give 6-(4-tert-butyl-phenyl)-2-methyl-5H-pyrazolo[1,5-a]pyrazin-4-one as colourless crystals; HPLC/MS 2.76 min (B), [M+H] 282;

¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 11.40 (s, 1H), 7.91 (d, J=0.5, 1H), 7.66 (d, J=8.6, 2H), 7.48 (d, J=8.6, 2H), 6.80 (s, 1H), 2.36 (s, 3H), 1.31 (s, 9H).

The following compound is prepared analogously

6-(4-tert-butyl-phenyl)-2-trifluoromethyl-5H-pyrazolo[1,5-a]pyrazin-4-one ("A55")

HPLC/MS 3.18 min (B), [M+H] 336.

Example 9

Synthesis of 3-(4-{1-[2-(tetrahydro-pyran-2-yloxy)-ethyl]-1H-pyrazol-4-yl}-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one ("A31") and 3-{4-[1-(2-hydroxy-ethyl)-1H-pyrazol-4-yl]-phenyl}-2H-pyrrolo[1,2-a]pyrazin-1-one ("A32")

5

10

15

82 mg (0.252 mmol) 2-Hydroxymethyl-6-(4-trifluoromethoxy-phenyl)-5H-pyrazolo[1,5-a]pyrazin-4-one are treated with thionyl chloride in dichloromethane similar to WO2010/043676 (example G02) to give 2-chloromethyl-6-(4-trifluoromethoxy-phenyl)-5H-pyrazolo[1,5-a]pyrazin-4-one as pale pink crystals; HPLC/MS 1.91 min (C), [M+H]⁺ 344;

¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 11.68 (s, 1H), 8.09 (s, 1H), 7.87 (d, J=8.8, 2H), 7.49 (d, J=8.2, 2H), 7.10 (s, 1H), 4.88 (s, 2H).

A solution of 18.9 mg (0.055 mmol) 2-chloromethyl-6-(4-trifluoromethoxy-phenyl)-5H-pyrazolo[1,5-a]pyrazin-4-one in 0.5 ml THF is flushed with nitrogen. 3.5 mg (0.092 mmol) Lithiumaluminiumhydride is added and the reaction mixture is stirred for 5 hours at room temperature. Then 1 ml THF, 3.5 µl water, 3.5 µl 15% aqueous NaOH solution and 10.5 µl water are added successively. The resulting suspension is stirred for 30 minutes at room temperature. The precipitate is filtered off and washed with THF and ethanol. The filtrate is evaporated and purified by preparative HPLC to give 2-methyl-6-(4-trifluoromethoxy-phenyl)-5H-pyrazolo[1,5-a]pyrazin-4-one as colourless crystals; HPLC/MS 2.53 min (B), [M+H]⁺ 310;

¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 11.50 (s, 1H), 8.01 (s, 1H), 7.86 (d, J=8.8, 2H), 7.47 (d, J=8.3, 2H), 6.81 (s, 1H), 2.36 (s, 3H).

Analogously, the following compounds are prepared

2-methyl-6-(4-pyrrolidin-1-yl-phenyl)-5H-pyrazolo[1,5-a]pyrazin-4-one ("A37")

HPLC/MS 2.57 min (B), [M+H]⁺ 295;

¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 11.24 (s, 1H), 7.75 (s, 1H), 7.54 (d, J=8.8, 2H), 6.74 (s, 1H), 6.59 (d, J=8.9, 2H), 3.27 (t, J=6.6, 4H), 2.34 (s, 3H), 1.97 (t, J=6.6, 4H);

("A35")

20

25

30

A suspension of 93.7 mg (0.655 mmol) 4-fluoro-1H-pyrrole-2-carboxylic acid methyl ester (synthesis described in J. Leroy et al. Tetrahedron 58, p. 6713, 2002) and 640 mg (1.96 mmol) cesium carbonate in 1.3 ml DMF is heated to 50° C under stirring. 167 mg (0.655 mmol) 2-bromo-1-(4-tert-butyl-phenyl)-ethanone is added and the reaction mixture is stirred for 18 hours at 50° C.

35

The reaction mixture is filtered with suction and the filtrate is evaporated. The residue is chromatographed on a silica gel column with cyclohexane/ethyl

acetate as eluent to give 1-[2-(4-tert-butyl-phenyl)-2-oxo-ethyl]-4-fluoro-1H-pyrrole-2-carboxylic acid methyl ester as brown amorphous solid; HPLC/MS 3.26 min (B), [M+H] 318.

5 A solution of 52.4 mg (0.165 mmol) 1-[2-(4-tert-butyl-phenyl)-2-oxo-ethyl]-4-fluoro-1H-pyrrole-2-carboxylic acid methyl ester and 382 mg (4.95 mmol) ammonium acetate in 0.5 ml acetic acid is stirred for 18 hours at 110° C. The reaction mixture is allowed to cool to room temperature and excess water is
10 added. The resulting precipitate is filtered off, washed with water and dried. It is chromatographed on a silica gel column with cyclohexane / ethyl acetate as eluent to give 3-(4-tert-butyl-phenyl)-7-fluoro-2H-pyrrolo[1,2-a]pyrazin-1-one as light brown crystals; HPLC/MS 2.88 min (B), [M+H] 285;
15 ¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 10.97 (s, 1H), 7.61 (s, 1H), 7.58 (d, J=8.5, 2H), 7.48 (m, 3H), 6.75 (d, J=1.6, 1H), 1.31 (s, 9H).

Analogously, the following compound is prepared

20 7-fluoro-3-phenyl-2H-pyrrolo[1,2-a]pyrazin-1-one ("A93")

HPLC/MS 2.27 min (B), [M+H] 229;

Example 12

30 Synthesis of 2-bromomethyl-6-(4-bromo-phenyl)-5H-pyrazolo[1,5-a]pyrazin-4-one ("A36") and 6-(4-bromo-phenyl)-2-methyl-5H-pyrazolo[1,5-a]pyrazin-4-one ("A39")

35

10 To a suspension of 142 mg (0.445 mmol) 6-(4-bromo-phenyl)-2-hydroxy-
methyl-5H-pyrazolo[1,5-a]pyrazin-4-one in 8 ml dichloromethane is added 52
μl (0.56 mmol) phosphorus tribromide. The reaction mixture is stirred for 20
15 hours at room temperature. The mixture is partitioned between water and
dichloromethane. The organic phase is dried over sodium sulfate and
evaporated. Purification by preparative HPLC (RP18 silica gel, eluent
water/acetonitrile/formic acid) affords 2-bromomethyl-6-(4-bromo-phenyl)-5H-
pyrazolo[1,5-a]pyrazin-4-one as off-white solid; HPLC/MS 2.21 min (A), [M+H]
20 384.

To a solution of 64.4 mg (0.168 mmol) bromomethyl-6-(4-bromo-phenyl)-5H-
pyrazolo[1,5-a]pyrazin-4-one in 2.5 ml acetic acid are added 55 mg (0.84
25 mmol) activated zinc powder. The reaction mixture is stirred at 100° C for 18
hours. The reaction mixture is allowed to cool to room temperature and
partitioned between water and ethylacetate. The organic phase is washed with
saturated sodium hydrogen carbonate solution, dried over sodium sulfate and
30 evaporated to afford 6-(4-bromo-phenyl)-2-methyl-5H-pyrazolo[1,5-a]pyrazin-
4-one as white solid;
HPLC/MS 2.00 min (A), [M+H] 304/306;
¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 11.52 (s, 1H), 8.00 (s, 1H), 7.67 (m,
4H), 6.81 (s, 1H), 2.36 (s, 3H).

35

Example 13

Synthesis of 3-(1-tert-butyl-1H-pyrazol-4-yl)-7-methyl-2H-pyrrolo[1,2-a]pyrazin-1-one ("A57")

To a suspension of 5.00 g (29.7 mmol) 1-tert-butyl-1H-pyrazole-4-carboxylic acid and 5.80 g (59.5 mmol) N,O-dimethylhydroxylamine hydrochloride in 60 ml dichloromethane are added 12.5 g (65.4 mmol) N-(3-dimethylaminopropyl)-N'-ethylcarbodiimide hydrochloride, 4.42 g (32.7 mmol) 1-hydroxybenzotriazol and 16.5 ml (119 mmol) triethylamine. The reaction mixture is stirred for 18 hours at room temperature. It is quenched with saturated sodium hydrogen carbonate solution and the mixture is partitioned between water and dichloromethane. The organic phase is dried over sodium sulfate and evaporated. The residue is chromatographed on a silica gel column with cyclohexane/ethyl acetate as eluent to afford 1-tert-butyl-1H-pyrazole-4-carboxylic acid methoxy-methyl-amide as colorless crystals; HPLC/MS 1.91 min (B), [M+H] 212.

Under nitrogen, a solution of 5.87 g (27.7 mmol) 1-tert-butyl-1H-pyrazole-4-carboxylic acid methoxy-methyl-amide in 55 ml THF is cooled to 0° C and 18.5 ml (55.5 mmol) of a 3 M solution of methylmagnesium bromide in diethyl ether

is added dropwise at 0° C. The reaction mixture is stirred for 18 hours at room temperature. The reaction mixture is partitioned between brine and ethyl acetate. The organic phase is dried over sodium sulfate and evaporated. The residue is chromatographed on a silica gel column with cyclohexane/ethyl acetate as eluent to afford 1-(1-tert-butyl-1H-pyrazol-4-yl)-ethanone as white solid; HPLC/MS 1.87 min (B), [M+H] 167;

¹H NMR (300 MHz, DMSO-d₆) δ [ppm] 8.44 (d, *J* = 0.7 Hz, 1H), 7.92 (d, *J* = 0.7 Hz, 1H), 2.37 (s, 3H), 1.54 (s, 9H).

To a solution of 1.66 g (10.0 mmol) 1-(1-tert-butyl-1H-pyrazol-4-yl)-ethanone in 18 ml dichloromethane is added 5.86 µl (0.10 mmol) of a 32% solution of hydrobromic acid in acetic acid. Then a solution of 3.20 g (20 mmol) bromine in 5 ml dichloromethane is added dropwise. The reaction mixture is stirred for 3 days at room temperature. Then aqueous sodium hydrogen sulfite is added to reduce the excess bromine. The reaction mixture is reduced in volume under vacuum and it is then partitioned between water and ethyl acetate. The organic phase is dried over sodium sulfate and evaporated. The residue is chromatographed on a silica gel column with cyclohexane/ethyl acetate as eluent to afford 2-bromo-1-(1-tert-butyl-1H-pyrazol-4-yl)-ethanone as yellow oil, which crystallizes on standing; HPLC/MS 2.28 min (B), [M+H] 245/247.

To a suspension of 229 mg (1.50 mmol) 4-methyl-1H-pyrrole-2-carboxylic acid ethyl ester in 3.7 ml DMF is added 185 mg (1.65 mmol) potassium-tert-butoxide portionwise under nitrogen. The mixture is stirred for 30 minutes at room temperature and cooled to 0° C. Then 367 mg (1.50 mmol) 2-bromo-1-(1-tert-butyl-1H-pyrazol-4-yl)-ethanone is added. The mixture is stirred for 1 hour at 0°C and for 30 minutes at room temperature. The reaction mixture is partitioned between dichloromethane and water. The organic phase is dried over sodium sulfate and evaporated. The residue is chromatographed on a silica gel column with cyclohexane/ethyl acetate to afford 1-[2-(1-tert-butyl-1H-pyrazol-4-yl)-2-oxo-ethyl]-4-methyl-1H-pyrrole-2-carboxylic acid ethyl ester as yellow oil; HPLC/MS 2.82 min (B), [M+H] 318.

A solution of 375 mg (1.18 mmol) 1-[2-(1-tert-butyl-1H-pyrazol-4-yl)-2-oxo-ethyl]-4-methyl-1H-pyrrole-2-carboxylic acid ethyl ester and 4.89 g (63.5 mmol) ammonium acetate in 4.15 ml acetic acid is stirred for 28 hours at 110° C. The reaction mixture is allowed to cool to room temperature and excess water is added. The resulting precipitate is filtered off, washed with water and dried. It is chromatographed on a silica gel column with cyclohexane/ethyl acetate as eluent to give 3-(1-tert-butyl-1H-pyrazol-4-yl)-7-methyl-2H-pyrrolo[1,2-a]pyrazin-1-one as light yellow solid; HPLC/MS 2.27 min (B), [M+H]⁺ 271;

¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 10.47 (s, 1H), 8.38 (d, *J* = 0.8 Hz, 1H), 7.88 (d, *J* = 0.8 Hz, 1H), 7.60 (d, *J* = 0.8 Hz, 1H), 7.15 (dd, *J* = 1.7, 0.9 Hz, 1H), 6.67 (dt, *J* = 1.6, 0.8 Hz, 1H), 2.17 (s, 3H), 1.53 (s, 9H).

Example 14

Synthesis of 3-(4-bromo-phenyl)-7-fluoro-2H-pyrrolo[1,2-a]pyrazin-1-one ("A58") and 7-fluoro-3-[4-(1-hydroxy-1-methyl-ethyl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one ("A59")

To a solution of 15.7 g (100 mmol) 4-fluoro-1H-pyrrole-2-carboxylic acid ethyl ester and 27.8 g (100 mmol) 2,4'-dibromoacetophenone in 150 ml acetone is added 16.6 g (120 mmol) cesium carbonate. The resulting suspension is stirred at 35° C for 3 days. The reaction mixture is added to 600 ml water under stirring. The resulting precipitate is filtered off, washed with water and dried under vacuum to afford 1-[2-(4-bromo-phenyl)-2-oxo-ethyl]-4-fluoro-1H-pyrrole-2-carboxylic acid ethyl ester as light yellow solid; HPLC/MS 3.14 (B), [M+H] 354/356;

¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 7.97 (d, *J* = 8.6 Hz, 2H), 7.82 (d, *J* = 8.6 Hz, 2H), 7.13 (dd, *J* = 3.3, 2.2 Hz, 1H), 6.72 (d, *J* = 2.2 Hz, 1H), 5.82 (s, 2H), 4.08 (q, *J* = 7.1 Hz, 2H), 1.14 (t, *J* = 7.1 Hz, 3H).

A suspension of 27.4 g (77.3 mmol) 1-[2-(4-bromo-phenyl)-2-oxo-ethyl]-4-fluoro-1H-pyrrole-2-carboxylic acid ethyl ester and 140 g (1.82 mol) ammonium acetate in 150 ml acetic acid is heated to 110° C and the resulting solution is stirred for 18 hours at 110° C. The reaction mixture is allowed to cool to room temperature and added to 1.5 l water under stirring. The resulting precipitate is filtered off, washed with water and dried under vacuum. It is taken up in isopropyl acetate, heated to reflux and filtered while hot. The residue is washed with isopropyl acetate and dried under vacuum to afford 3-(4-bromo-phenyl)-7-fluoro-2H-pyrrolo[1,2-a]pyrazin-1-one as grey crystals; HPLC/MS 1.83 min (A), [M+H] 307/309;

¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 11.07 (s, 1H), 7.72 – 7.64 (m, 3H), 7.63 – 7.57 (m, 2H), 7.47 (dd, *J* = 3.4, 1.9 Hz, 1H), 6.77 (dd, *J* = 1.9, 0.6 Hz, 1H).

In an autoclave, a suspension of 20.4 g (66.5 mmol) 3-(4-bromo-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one and 15.1 ml (110 mmol) triethylamine in 240 ml methanol and 240 ml toluene is flushed with nitrogen. 1.69 g (2.07 mmol) (1,1'-bis(diphenylphosphino)-ferrocene)dichloropalladium(II) and 1.53 g 2.76 mmol) 1,1-bis-(diphenylphosphino)-ferrocene are added under nitrogen. Then

the autoclave is filled with 4.5 bar carbon monoxide and heated to 100°C. The autoclave is kept at this temperature for 16 hours with a carbon monoxide pressure of 6.2 – 4.2 bar. The autoclave is brought to atmospheric pressure. The solids are filtered off; the residue is washed with methanol and 2-propanol and dried under vacuum to give 4-(7-fluoro-1-oxo-1,2-dihydro-pyrrolo[1,2-a]pyrazin-3-yl)-benzoic acid methyl ester as light pink powder; HPLC/MS 2.32 min (B), [M+H] 287;

¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 11.14 (s, 1H), 8.02 (d, m, 2H), 7.85 – 7.78 (m, 3H), 7.50 (dd, *J* = 3.5, 1.9 Hz, 1H), 6.80 (d, *J* = 1.8 Hz, 1H), 3.88 (s, 3H).

To a suspension of 5.73 g (20.0 mmol) 4-(7-fluoro-1-oxo-1,2-dihydro-pyrrolo[1,2-a]pyrazin-3-yl)-benzoic acid methyl ester in 85 ml THF are added 5.42 g (22.0 mmol) cerium(III) chloride and the mixture is stirred for 1 h at ambient temperature under nitrogen. Then 30.5 ml (84.0 mmol) of a 20% solution of methylmagnesium chloride in THF is added dropwise and the reaction mixture is stirred for 30 minutes at room temperature. The reaction mixture is partitioned between THF and brine and the organic phase is dried over sodium sulfate and evaporated. The residue is chromatographed on a silica gel column with methanol/dichloromethane as eluent to give 7-fluoro-3-[4-(1-hydroxy-1-methyl-ethyl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one as cream-colored powder; HPLC/MS 2.15 min (B), [M+H] 287;

¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 10.97 (s, 1H), 7.61 (s, 1H), 7.59 (d, *J* = 8.5 Hz, 2H), 7.54 (d, *J* = 8.5 Hz, 2H), 7.47 (dd, *J* = 3.4, 1.9 Hz, 1H), 6.75 (d, *J* = 1.7 Hz, 1H), 5.06 (s, 1H), 1.45 (s, 6H).

The following compounds are prepared analogously:

7-chloro-3-[4-(1-hydroxy-1-methyl-ethyl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one ("A60")

5

HPLC/MS 1.81 (C), [M+H] 303;

10

¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 11.00 (s, 1H), 7.66 (s, 1H), 7.63 – 7.58 (m, 3H), 7.56 (d, *J* = 8.6 Hz, 2H), 6.94 (dd, *J* = 1.8, 0.7 Hz, 1H), 5.09 (s, 1H), 1.46 (s, 6H);

15

3-[4-(1-ethyl-1-hydroxy-propyl)-phenyl]-7-fluoro-2H-pyrrolo[1,2-a]pyrazin-1-one ("A61")

20

HPLC/MS 2.47 (B), [M+H] 315;

25

¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 10.95 (s, 1H), 7.64 (s, 1H), 7.59 (d, *J* = 8.2 Hz, 2H), 7.49 – 7.41 (m, 3H), 6.75 (d, *J* = 1.9 Hz, 1H), 4.60 (s, 1H), 1.73 (m, 4H), 0.66 (t, *J* = 7.3 Hz, 6H);

30

3-[4-(1-hydroxy-1-methyl-ethyl)-phenyl]-1-oxo-1,2-dihydro-pyrrolo[1,2-a]pyrazine-7-carbonitrile ("A62")

35

HPLC/MS 1.70 (A), [M+H] 294;

^1H NMR (400 MHz, DMSO- d_6) ppm [ppm] 11.15 (s, 1H), 8.14 (d, J = 1.7 Hz, 1H), 7.72 (s, 1H), 7.64 – 7.53 (m, 4H), 7.43 – 7.36 (m, 1H), 5.10 (s, 1H), 1.45 (s, 6H).

Example 15

Synthesis of 7-fluoro-3-[4-(1-fluoro-1-methyl-ethyl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one ("A63")

A suspension of 57.3 mg (0.20 mmol) 7-fluoro-3-[4-(1-hydroxy-1-methyl-ethyl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one in 0.5 ml dichloromethane is cooled to -78°C . Then 105 μl (0.80 mmol) diethylaminosulfurtrifluoride are added. The reaction mixture is allowed to reach room temperature over 30 minutes. The reaction mixture is evaporated and the residue is treated with water and saturated sodium hydrogen carbonate solution. The solids are filtered off and chromatographed on a silica gel column with cyclohexane/ethyl acetate as eluent to afford 7-fluoro-3-[4-(1-fluoro-1-methyl-ethyl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one as white powder; HPLC/MS 2.60 min (B), [M+H] 289; ^1H NMR (400 MHz, DMSO- d_6) δ [ppm] 11.01 (s, 1H), 7.70 – 7.63 (m, 3H), 7.53 – 7.44 (m, 3H), 6.76 (d, J = 1.9 Hz, 1H), 1.67 (d, J = 22.2 Hz, 6H).

Example 16

Synthesis of 6-(4-tert-butyl-phenyl)-2-fluoromethyl-5H-pyrazolo[1,5-a]pyrazin-4-one ("A64")

5

10

15

20

A suspension of 149 mg (0.50 mmol) 6-(4-tert-butyl-phenyl)-2-hydroxymethyl-5H-pyrazolo[1,5-a]pyrazin-4-one in 1.25 ml dichloromethane is cooled to -78° C. Then 264 µl (2.00 mmol) diethylaminosulfurtrifluoride are added. The reaction mixture is allowed to reach room temperature over 30 minutes. The reaction mixture is evaporated and the residue is treated with water and saturated sodium hydrogen carbonate solution. The solids are filtered off and chromatographed on a silica gel column with cyclohexane/ethyl acetate as eluent to afford 6-(4-tert-butyl-phenyl)-2-fluoromethyl-5H-pyrazolo[1,5-a]pyrazin-4-one as white powder; HPLC/MS 2.80 min (B), [M+H]⁺ 300; ¹H NMR (400 MHz, DMSO-d₆) δ 11.57 (s, 1H), 8.03 (s, 1H), 7.73 – 7.64 (m, 2H), 7.55 – 7.46 (m, 2H), 7.15 (d, *J* = 2.0 Hz, 1H), 5.52 (d, *J* = 48.1 Hz, 2H), 1.32 (s, 9H).

Example 17

Synthesis of 2-hydroxymethyl-6-[4-(1-hydroxy-1-methyl-ethyl)-phenyl]-5H-pyrazolo[1,5-a]pyrazin-4-one ("A65")

25

30

35

HPLC/MS 1.38 min (C), [M+H]⁺ 300.

Example 18

Synthesis of 6-(4-tert-butyl-phenyl)-2-difluoromethyl-5H-pyrazolo[1,5-a]pyrazin-4-one ("A66")

5

10

A suspension of 148 mg (0.50 mmol) 6-(4-tert-butyl-phenyl)-4-oxo-4,5-dihydro-pyrazolo[1,5-a]pyrazine-2-carbaldehyde in 1.25 ml dichloromethane is cooled to -78° C. Then 264 µl (2.00 mmol) diethylaminosulfurtrifluoride are added.

The reaction mixture is allowed to reach room temperature over 30 minutes.

15

The reaction mixture is evaporated and the residue is treated with water and saturated sodium hydrogen carbonate solution. The solids are filtered off and triturated with tert-butyl methyl ether to afford 6-(4-tert-butyl-phenyl)-2-difluoromethyl-5H-pyrazolo[1,5-a]pyrazin-4-one as beige powder; HPLC/MS

20

2.95 min (B), [M+H] 318;

¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 10.79 (s, 1H), 8.09 (s, 1H), 7.73 – 7.65 (m, 2H), 7.56 – 7.47 (m, 2H), 7.23 (s, 1H), 7.21 (t, J = 54.3 Hz, 1H), 5.75 (s, 1H), 1.32 (s, 9H).

25

Example 19

Synthesis of 6-(4-bromo-phenyl)-2-trifluoromethyl-5H-pyrazolo[1,5-a]pyrazin-4-one ("A67"), 4-(4-oxo-2-trifluoromethyl-4,5-dihydro-pyrazolo[1,5-a]pyrazin-6-yl)-benzoic acid methyl ester ("A68") and 6-[4-(1-hydroxy-1-methyl-ethyl)-phenyl]-2-trifluoromethyl-5H-pyrazolo[1,5-a]pyrazin-4-one ("A69")

- 94 -

- 20 To a solution of 1.93 g (9.27 mmol) 5-trifluoromethyl-2H-pyrazole-3-carboxylic acid ethyl ester and 2.58 g (9.27 mmol) 2-bromo-1-(4-bromo-phenyl)-ethanone in 13 ml acetone are added 1.54 g (11.1 mmol) potassium carbonate. The resulting suspension is stirred overnight at room temperature.
- 25 The reaction mixture is evaporated to dryness and the residue is partitioned between water and dichloromethane. The organic phase is dried over sodium sulfate and evaporated to give a mixture of two isomers as brown resin, which is used as such in the next step. Isomer A: 2-[2-(4-bromo-phenyl)-2-oxo-ethyl]-5-trifluoromethyl-2H-pyrazole-3-carboxylic acid ethyl ester; HPLC/MS 3.30 min (B), [M+H] 405/407;
- 30 Isomer B: 1-[2-(4-bromo-phenyl)-2-oxo-ethyl]-5-trifluoromethyl-1H-pyrazole-3-carboxylic acid ethyl ester; HPLC/MS 3.16 min (B), [M+H] 405/407;
- Isomer ratio: A : B = 89 : 11.

35

The crude product obtained in the previous step is dissolved in 32 ml glacial acetic acid, 13.6 g (176 mmol) ammonium acetate is added and the resulting suspension is stirred for 18 hours at 110° C. The reaction mixture is allowed to cool to room temperature and excess water is added. The resulting precipitate is filtered off, washed with water and dried under vacuum to yield 6-(4-bromo-phenyl)-2-trifluoromethyl-5H-pyrazolo[1,5-a]pyrazin-4-one as light brown powder; HPLC/MS 2.37 min (C), [M+H] 358/360;
¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 11.92 (s, 1H), 8.24 (s, 1H), 7.71 (s, 4H), 7.54 (t, *J* = 0.8 Hz, 1H).

In an autoclave, a suspension of 358 mg (1.00 mmol) 6-(4-bromo-phenyl)-2-trifluoromethyl-5H-pyrazolo[1,5-a]pyrazin-4-one and 210 µl (1.5 mmol) triethylamine in 7 ml methanol and 7 ml toluene is flushed with nitrogen. 25 mg (0.03 mmol) (1,1'-bis(diphenylphosphino)-ferrocene)dichloropalladium(II) and 22 mg (0.04 mmol) 1,1-bis-(diphenylphosphino)-ferrocene are added under nitrogen. Then the autoclave is filled with 2 bar carbon monoxide and heated to 100°C. The autoclave is kept at this temperature for 18 hours with a carbon monoxide pressure of 4.2 bar maximum. The autoclave is brought to atmospheric pressure. The solids are filtered off; the residue is washed with methanol and dried under vacuum to afford 4-(4-oxo-2-trifluoromethyl-4,5-dihydro-pyrazolo[1,5-a]pyrazin-6-yl)-benzoic acid methyl ester as fine red powder; HPLC/MS 2.20 min (C), [M+H] 338;
¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 11.99 (s, 1H), 8.33 (s, 1H), 8.08 – 8.01 (m, 2H), 7.96 – 7.89 (m, 2H), 7.55 (s, 1H), 3.89 (s, 3H).

To a suspension of 223 mg (0.66 mmol) 4-(4-oxo-2-trifluoromethyl-4,5-dihydro-pyrazolo[1,5-a]pyrazin-6-yl)-benzoic acid methyl ester in 2.8 ml THF are added 178 mg (0.72 mmol) cerium(III) chloride. The mixture is stirred for 1 h at ambient temperature under nitrogen. Then 1.31 ml (3.60 mmol) of a 20% solution of methylmagnesium chloride in THF is added dropwise and the reaction mixture is stirred for 1 hour at room temperature. The reaction

mixture is partitioned between THF and brine and the organic phase is dried over sodium sulfate and evaporated. The residue is chromatographed on a silica gel column with cyclohexane/ethyl acetate as eluent to afford 6-[4-(1-hydroxy-1-methyl-ethyl)-phenyl]-2-trifluoromethyl-5H-pyrazolo[1,5-a]pyrazin-4-one as light yellow powder; HPLC/MS 2.46 min (B), [M+H]⁺ 338; ¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 11.84 (s, 1H), 8.17 (s, 1H), 7.70 (d, J = 8.5 Hz, 2H), 7.58 (d, J = 8.5 Hz, 2H), 7.53 (s, 1H), 5.11 (s, 1H), 1.46 (s, 6H).

Example 20

Synthesis of 7-fluoro-3-{4-[1-(2-hydroxy-ethoxy)-1-methyl-ethyl]-phenyl}-2H-pyrrolo[1,2-a]pyrazin-1-one ("A70")

To a suspension of 28.6 mg (0.10 mmol) 7-fluoro-3-[4-(1-hydroxy-1-methyl-ethyl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one in 0.45 ml ethane-1,2-diol is added 1.7 mg (0.01 mmol) toluene-4-sulfonic acid monohydrate. The reaction mixture is stirred for 5 days at ambient temperature. The reaction mixture is partitioned between water and ethylacetate. The organic phase is dried over sodium sulfate and evaporated. The residue is chromatographed on a silica gel column with cyclohexane/ethyl acetate as eluent to afford 7-fluoro-3-{4-[1-(2-hydroxy-ethoxy)-1-methyl-ethyl]-phenyl}-2H-pyrrolo[1,2-a]pyrazin-1-one as white powder; HPLC/MS 2.17 min (B), [M+H]⁺ 331; ¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 10.99 (s, 1H), 7.68 – 7.61 (m, 3H), 7.55 – 7.50 (m, 2H), 7.48 (dd, J = 3.4, 1.9 Hz, 1H), 6.77 (d, J = 1.9 Hz, 1H), 4.55 (t, J = 5.6 Hz, 1H), 3.50 (q, J = 5.5 Hz, 2H), 3.19 (t, J = 5.6 Hz, 2H), 1.50 (s, 6H).

The following compound is prepared analogously:

7-fluoro-3-{4-[1-(2-methoxy-ethoxy)-1-methyl-ethyl]-phenyl}-2H-pyrrolo[1,2-a]pyrazin-1-one ("A71")

5

HPLC/MS 2.47 min (B), [M+H] 345.

10

Example 21

Synthesis of 3-[4-(1-amino-1-methyl-ethyl)-phenyl]-7-fluoro-2H-pyrrolo[1,2-a]pyrazin-1-one ("A72")

15

20

25

To a suspension of 143 mg (0.5 mmol) 7-fluoro-3-[4-(1-hydroxy-1-methyl-ethyl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one and 71.5 mg (1.1 mmol) sodium azide in 1 ml dichloromethane is added dropwise under external cooling with ice a solution of 316 μ l (4.1 mmol) trifluoroacetic acid in 0.6 ml dichloromethane. The reaction mixture is stirred for 3 hours at 0° C. Ice and 25% aqueous ammonia are added to obtain a two-phase mixture with a pH of 11.

30

Then a 1 : 1 mixture of cyclohexane/ethyl acetate is added. The organic phase is separated, dried over sodium sulfate and evaporated to afford 3-[4-(1-amino-1-methyl-ethyl)-phenyl]-7-fluoro-2H-pyrrolo[1,2-a]pyrazin-1-one as beige powder; HPLC/MS 2.29 min (A), [M+H] 312.

35

To a slurry of 103 mg (0.33 mmol) 3-[4-(1-azido-1-methyl-ethyl)-phenyl]-7-fluoro-2H-pyrrolo[1,2-a]pyrazin-1-one and 90 mg (1.38 mmol) zinc dust in 2 ml THF is added 175 ml (3.1 mmol) acetic acid and the mixture is stirred for 3

hours at room temperature. The suspension is quenched with THF/dichloromethane/ethyl acetate. The mixture is filtered with suction and the residue is washed with methanol. The filtrate is evaporated and the residue is purified by preparative HPLC to afford 3-[4-(1-amino-1-methyl-ethyl)-phenyl]-7-fluoro-2H-pyrrolo[1,2-a]pyrazin-1-one formate salt as white solid; HPLC/MS 1.57 min (B), [M+H] 268;

^1H NMR (400 MHz, DMSO- d_6) δ [ppm] 8.35 (s, 1H), 7.70 – 7.58 (m, 6H), 7.48 (dd, J = 3.4, 1.9 Hz, 1H), 6.76 (d, J = 1.7 Hz, 1H), 4.57 (broad peak), 1.52 (s, 6H).

Example 22

Synthesis of 7-fluoro-3-[4-(2-methyl-tetrahydro-furan-2-yl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one ("A73") and 7-fluoro-3-[4-(4-hydroxy-1-methylene-butyl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one ("A74")

3-(4-Bromo-phenyl)-7-fluoro-2H-pyrrolo[1,2-a]pyrazin-1-one (154 mg, 0.50 mmol), palladium(II)acetate (5.6 mg, 0.03 mmol), 1,3-bis-(diphenylphosphino)-propane (21.3 mg, 0.05 mmol), 4-pentene-1-ol (51.7 mg, 0.60 mmol) and diisopropylammonium-tetrafluoroborate (142 mg, 0.75 mmol) are weighed into a reaction vial. 1,4-Dioxane (1 ml) is added and the reaction vial is flushed with nitrogen. The resulting suspension is stirred for 1 minute and triethylamine (208 μ l, 1.50 mmol) is added and the reaction vial is flushed with nitrogen and closed. The reaction mixture is stirred overnight at 110° C. The reaction mixture is allowed to cool to room temperature. n-Heptane (1.5 ml) and tetrafluoroboric acid (0.21 ml, 54% solution in diethylether, 1.5 mmol) are added and the resulting biphasic mixture is stirred vigorously at room temperature for 3 hours. Triethylamine (69 μ l, 0.5 mmol) is added and the reaction mixture is then partitioned between water and dichloromethane. The organic phase is dried over sodium sulfate and evaporated. The residue is chromatographed on a silica gel column with cyclohexane/ethyl acetate as eluent to give two products:

7-fluoro-3-[4-(2-methyl-tetrahydro-furan-2-yl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one; white solid; HPLC/MS 2.52 (B), [M+H] 313; ^1H NMR (400 MHz, DMSO- d_6) δ [ppm] 10.97 (s, 1H), 7.66 – 7.58 (m, 3H), 7.52 – 7.44 (m, 3H), 6.76 (d, J = 1.8 Hz, 1H), 3.99 – 3.89 (m, 1H), 3.83 (td, J = 8.0, 5.5 Hz, 1H), 2.17 – 1.90 (m, 3H), 1.82 – 1.67 (m, 1H), 1.46 (s, 3H);

7-fluoro-3-[4-(4-hydroxy-1-methylene-butyl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one (contains some of the isomer 7-fluoro-3-[4-((E)-4-hydroxy-1-methyl-but-1-enyl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one); HPLC/MS 2.32 (B), [M+H] 313; ^1H NMR (400 MHz, DMSO- d_6) δ [ppm] 10.98 (s, 1H), 7.69 – 7.53 (m, 3H), 7.53 – 7.43 (m, 3H), 6.75 (m, 1H), 6.45 – 6.39 (m, 2H), 4.41 (t, J = 5.2 Hz, 1H), 3.45 (td, J = 6.4, 5.0 Hz, 2H), 2.29 – 2.19 (m, 2H), 1.66 – 1.54 (m, 2H).

Example 23

Synthesis of 3-(4-piperidin-4-yl-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one ("A75")

4-Phenyl-piperidine (4.0 g; 24.81 mmol) is dissolved in dichloromethane (50 ml), triethylamine (3.44 mL; 24.8 mmol) is added and the solution is cooled to -78° C. At this temperature trifluoroacetic anhydride (3.45 ml; 24.81 mmol) is added dropwise over 2 minutes. The reaction is left stirring at -78° C for 10 min and then allowed to warm to room temperature over 30 minutes. The reaction mixture is diluted with dichloromethane and extracted with water (2 times). The organic layer is once washed with saturated NaHCO₃ solution, water (three times), dried over Na₂SO₄, filtered off by suction and evaporated to dryness. The crude product 2,2,2-trifluoro-1-(4-phenyl-piperidin-1-yl)-ethanone, a yellow clear oil, is used without further purification.

For the reaction a 3-necked round-bottom flask is washed with acetone, heated and cooled down in a desiccator. Aluminium chloride (6.38 g; 47.83 mmol) is weighed into this flask, dry dichloromethane (30 ml) is added and under argon bromoacetyl bromide (2.60 ml; 29.9 mmol), dissolved in dry dichloromethane (20 ml), is added dropwise at 0 - 5° C. 2,2,2-Trifluoro-1-(4-phenyl-piperidin-1-yl)-ethanone (6.24 g; 23.92 mmol) is dissolved in 10 ml dichloromethane (dried) and added dropwise to the reaction mixture, keeping

the temperature between 0-5 °C. The mixture is stirred at 0 - 5°C for 1.5 h, warmed to room temperature and stirred overnight. The reaction mixture is poured onto ice (200 g) and extracted with dichloromethane (3 times). The combined organic layers are washed with saturated NaHCO₃ solution, water and brine, dried over Na₂SO₄, filtered off by suction and evaporated to dryness. The crude oil is purified by flash chromatography to give 1-{4-[4-(2-bromo-acetyl)-phenyl]-piperidin-1-yl}-2,2,2-trifluoro-ethanone as colourless oil.

1*H*-Pyrrole-2-carbonitrile (0.84 ml; 9.42 mmol) and 1-{4-[4-(2-bromo-acetyl)-phenyl]-piperidin-1-yl}-2,2,2-trifluoro-ethanone (2.74 g; 7.25 mmol) are dissolved in acetone (25 ml). To this clear brown solution potassium carbonate (2 g; 14.49 mmol) is added and the mixture is stirred at room temperature overnight. The reaction mixture is filtered off by suction and washed with acetone. The filtrate is evaporated to dryness. The residue is purified by flash chromatography to afford 1-(2-oxo-2-{4-[1-(2,2,2-trifluoro-acetyl)-piperidin-4-yl]-phenyl}-ethyl)-1*H*-pyrrole-2-carbonitrile as pale off-white crystals.

1-(2-Oxo-2-{4-[1-(2,2,2-trifluoro-acetyl)-piperidin-4-yl]-phenyl}-ethyl)-1*H*-pyrrole-2-carbonitrile (1.40 g; 3.60 mmol) is slurried in methanol (10 ml). Potassium carbonate (2.49 g; 17.98 mmol), dry dimethylsulfoxide (0.77 ml; 10.79 mmol) and hydrogen peroxide (1.10 ml; 10.79 mmol) are added (caution: strong exothermic reaction after the addition of hydrogen peroxide). The yellow suspension is stirred overnight. The reaction mixture is diluted with water, the precipitate is filtered off by suction, washed with water and dried under vacuum at 50° C. The crude product is purified by flash chromatography. The combined fractions are evaporated to dryness. The residue is triturated with diethylether, filtered off by suction and dried under vacuum at 50° C to afford 3-(4-piperidin-4-yl-phenyl)-2*H*-pyrrolo[1,2-*a*]pyrazin-1-one as off-white solid;
HPLC/MS 1.27 min (A), [M+H] 294;

¹H NMR (500 MHz, DMSO-d₆) δ [ppm] 10.47 (s, 2H), 7.68 (s, 1H), 7.59 (d, *J* = 8.0 Hz, 2H), 7.46 - 7.42 (m, 1H), 7.30 (d, *J* = 8.0 Hz, 2H), 6.90 (d, *J* = 4.0 Hz, 1H), 6.56 (t, *J* = 3.2 Hz, 1H), 3.07 - 2.98 (m, 2H), 2.66 - 2.46 (m, 3H), 1.73 - 1.65 (m, 2H), 1.52 (qd, *J* = 12.2 Hz, 3.9, 2H).

The following compound is synthesized analogously:

3-(4-Pyrrolidin-3-yl-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one ("A76")

pale yellow solid; HPLC/MS 1.25 min (A), [M+H]⁺ 280;

¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 7.70 (s, 1H), 7.62 - 7.57 (m, 2H), 7.47 - 7.44 (m, 1H), 7.38 - 7.34 (m, 2H), 6.92 - 6.89 (m, 1H), 6.57 (dd, *J* = 4.0 Hz, 2.5, 1H), 3.27 - 3.13 (m, 2H), 3.07 - 2.99 (m, 1H), 2.97 - 2.89 (m, 1H), 2.69 (dd, *J* = 10.0 Hz, 7.6, 1H), 2.22 - 2.11 (m, 1H), 1.77 - 1.68 (m, 1H).

Example 24

Synthesis of 7-fluoro-3-(4-piperidin-4-yl-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one ("A77")

15 4-Fluoro-1H-pyrrole-2-carboxylic acid ethyl ester (1.07 g; 6.83 mmol) and 1-{4-[4-(2-bromo-acetyl)-phenyl]-piperidin-1-yl}-2,2,2-trifluoro-ethanone (2.00 g; 5.26 mmol) are dissolved in acetone (20 ml). To this clear brown solution potassium carbonate (1.45 g; 10.51 mmol) is added and the reaction mixture is stirred at ambient temperature over night. The reaction mixture is diluted with acetone, filtered off by suction and washed with acetone. The filtrate is

20 evaporated to dryness. The crude product is purified by flash chromatography to afford 4-fluoro-1-(2-oxo-2-{4-[1-(2,2,2-trifluoro-acetyl)-piperidin-4-yl]-phenyl}-ethyl)-1H-pyrrole-2-carboxylic acid ethyl ester as off-white solid; HPLC/MS 2.67 min (A), [M+H] 455.

25

4-Fluoro-1-(2-oxo-2-{4-[1-(2,2,2-trifluoro-acetyl)-piperidin-4-yl]-phenyl}-ethyl)-1H-pyrrole-2-carboxylic acid ethyl ester (1.57 g; 3.42 mmol) is dissolved in acetic acid (10 ml) and ammonium acetate (5.80 g; 75.25 mmol) is added.

30 The reaction mixture is stirred at 110 °C overnight. The reaction mixture is allowed to cool to room temperature, poured into cold water (250 ml) and extracted with ethyl acetate. The organic layers are discarded. The aqueous layer is basified with 2N NaOH (pH11). A precipitate forms. The solid is filtered off by suction, washed with water and a small amount of ethyl acetate. Then

35 the solid is dissolved in 150 ml ethyl acetate, dried over Na₂SO₄, filtered off by

suction and evaporated to dryness. The residue is triturated with diethylether, filtered off and dried under vacuum at 50°C (overnight). The aqueous filtrate is extracted 3 times with ethyl acetate/MeOH (5%). The combined organic layers are washed with brine, dried over Na₂SO₄, filtered off and evaporated to dryness. The residue is triturated with diethylether, filtered off by suction and dried under vacuum to afford 7-fluoro-3-(4-piperidin-4-yl-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one as beige solid; HPLC/MS 1.37 min (A), [M+H] 312; ¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 7.63 - 7.53 (m, 3H), 7.48 - 7.45 (m, 1H), 7.35 - 7.26 (m, 2H), 6.77 - 6.72 (m, 1H), 3.06 - 2.98 (m, 2H), 2.62 - 2.59 (m, 1H), 2.59 - 2.53 (m, 2H), 1.73 - 1.64 (m, 2H), 1.51 (qd, J = 12.3, 3.9 Hz, 2H).

The following compound is synthesized analogously
7-Chloro-3-(4-piperidin-4-yl-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one ("A78")

beige solid; HPLC/MS 1.43 min (A), [M+H] 328;

¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 7.63 (s, 1H), 7.61 - 7.54 (m, 3H), 7.35 - 7.28 (m, 2H), 6.92 (d, J = 1.6 Hz, 1H), 3.03 (dt, J = 12.0, 3.0 Hz, 2H), 2.66 - 2.54 (m, 3H), 1.74 - 1.65 (m, 2H), 1.52 (qd, J = 12.3 Hz, 3.9, 2H).

Example 25

Synthesis of 3-[4-(1-methyl-piperidin-4-yl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one ("A79")

10 3-(4-Piperidin-4-yl-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one (50.0 mg; 0.17 mmol) is dissolved in acetonitrile (1.5 mL), 35% aqueous formaldehyde solution (67.0 μ l; 0.84 mmol) is added and the reaction mixture is stirred for 5 min. Sodium cyanoborohydride (21.2 mg; 0.34 mmol) is added in small portions and the reaction stirred for 2 h. The reaction mixture is diluted with water, treated with saturated NaHCO_3 solution and extracted with ethylacetate

15 (three times). The combined organic layers are washed with brine, dried over Na_2SO_4 , filtered and evaporated to dryness. The crude product is purified by preparative HPLC. The combined fractions are concentrated *in vacuo*, the aqueous residue is made basic with saturated NaHCO_3 solution, treated with NaCl (solid) and extracted with ethylacetate (four times). The combined

20 organic layers are washed with brine, dried over Na_2SO_4 , filtered off by suction and evaporated to dryness to afford 3-[4-(1-methyl-piperidin-4-yl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one as beige solid; HPLC/MS 1.28 min (A), $[\text{M}+\text{H}]$ 308; ^1H NMR (500 MHz, DMSO-d_6) δ [ppm] 10.69 (s, 1H), 7.68 (s, 1H), 7.61 - 7.57 (m, 2H), 7.45 - 7.43 (m, 1H), 7.34 - 7.30 (m, 2H), 6.91 - 6.88 (m, 1H), 6.56 (dd, $J = 3.9$ Hz, 2.5, 1H), 2.90 - 2.84 (m, 2H), 2.53 - 2.45 (m, 1H), 2.20 (s, 3H), 1.97 (td, $J = 11.6$ Hz, 2.7, 2H), 1.79 - 1.62 (m, 4H).

25

30 The following compounds are prepared analogously:

3-[4-(1-methyl-pyrrolidin-3-yl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one ("A80")

off-white solid; HPLC/MS 1.21 min (A), [M+H] 294;

¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 10.77 (s, 1H), 7.79 – 7.73 (m, 1H),
7.69 – 7.61 (m, 2H), 7.51 (dd, *J* = 2.6, 1.5 Hz, 1H), 7.47 – 7.37 (m, 2H), 6.96
(ddd, *J* = 3.9, 1.6, 0.7 Hz, 1H), 6.62 (dd, *J* = 4.0, 2.5 Hz, 1H), 3.42 (dq, *J* = 9.7,
7.0 Hz, 1H), 2.90 (dd, *J* = 9.0, 7.8 Hz, 1H), 2.77 – 2.62 (m, 2H), 2.50 (dd, *J* =
9.0, 6.7 Hz, 1H), 2.40 – 2.26 (m, 4H), 1.82 (ddt, *J* = 12.9, 8.4, 6.6 Hz, 1H).

7-fluoro-3-[4-(1-methyl-piperidin-4-yl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one
("A81")

white solid; HPLC/MS 1.39 min (A), [M+H] 326;

¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 10.96 (s, 1H), 7.62 - 7.53 (m, 3H),
7.46 (dd, *J* = 3.4, 1.9 Hz, 1H), 7.36 - 7.29 (m, 2H), 6.74 (d, *J* = 1.8 Hz, 1H),
2.91 - 2.82 (m, 2H), 2.55 - 2.44 (m, 1H), 2.19 (s, 3H), 2.02 - 1.91 (m, 2H),
1.79 - 1.59 (m, 4H).

7-chloro-3-[4-(1-methyl-piperidin-4-yl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one
("A82")

white solid; HPLC/MS 1.46 min (A), [M+H] 342;

¹H NMR (500 MHz, DMSO-d₆) δ [ppm] 10.96 (s, 1H), 7.62 (s, 1H), 7.60 - 7.54
(m, 3H), 7.37 - 7.30 (m, 2H), 6.92 (d, *J* = 1.7 Hz, 1H), 2.87 (dt, *J* = 11.9, 3.1
Hz, 2H), 2.55 - 2.45 (m, 1H), 2.20 (s, 3H), 1.97 (td, *J* = 11.7, 2.8 Hz, 2H), 1.78
- 1.61 (m, 4H).

Example 26

Synthesis of 6,7-difluoro-3-[4-(1-hydroxy-1-methyl-ethyl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one ("A83")

4-Fluoro-1H-pyrrole-2-carboxylic acid ethyl ester (1.57 g, 10.0 mmol) is dissolved in acetonitrile (10 ml), 1-chloromethyl-4-fluoro-1,4-diazonia-bicyclo[2.2.2]octane bis(tetrafluoroborate) (SelectfluorTM, 3.54 g, 10.0 mmol) is added and the mixture is irradiated in a Biotage Initiator microwave synthesizer for 5 minutes at 70° C. The reaction mixture is allowed to cool to room temperature and partitioned between water and dichloromethane. The organic phase is dried over sodium sulfate and evaporated. The residue is chromatographed on a silica gel column with cyclohexane/ethyl acetate as eluent to afford 4,5-difluoro-1H-pyrrole-2-carboxylic acid ethyl ester as white solid; HPLC/MS 1.78 (C), [M+H]⁺ 176; ¹H NMR (500 MHz, DMSO-d₆) δ [ppm] 12.93 (s, 1H), 6.67 (d, *J* = 4.5 Hz, 1H), 4.22 (q, *J* = 7.1 Hz, 2H), 1.26 (t, *J* = 7.1 Hz, 3H).

5-Fluoro-1H-pyrrole-2-carboxylic acid ethyl ester is prepared similarly;
HPLC/MS 1.68 (C), [M+H] 158; ¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 12.58
(s, 1H), 6.69 (dd, J = 4.9, 4.0 Hz, 1H), 5.69 (t, J = 4.0 Hz, 1H), 4.22 (q, J = 7.1
Hz, 2H), 1.27 (t, J = 7.1 Hz, 3H).

5

The following steps are carried out similar to example 14. From 4,5-difluoro-
1H-pyrrole-2-carboxylic acid ethyl ester is obtained 6,7-difluoro-3-[4-(1-
hydroxy-1-methyl-ethyl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one as beige
10 powder; HPLC/MS 1.70 (C), [M+H] 305; ¹H NMR (400 MHz, DMSO-d₆) δ
[ppm] 11.04 (s, 1H), 7.69 – 7.61 (m, 2H), 7.57 – 7.51 (m, 2H), 7.50 (s, 1H),
6.90 (d, J = 4.7 Hz, 1H), 5.09 (s, 1H), 1.44 (s, 6H).

15

6-fluoro-3-[4-(1-hydroxy-1-methyl-ethyl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-
one ("A84")

20

is prepared similarly from 5-fluoro-1H-pyrrole-2-carboxylic acid ethyl ester as
beige powder; HPLC/MS 1.63 (C), [M+H] 287; ¹H NMR (400 MHz, DMSO-d₆)
δ [ppm] 10.78 (s, 1H), 7.69 – 7.61 (m, 2H), 7.58 – 7.49 (m, 2H), 7.44 (s, 1H),
25 6.86 (dd, J = 5.1, 4.3 Hz, 1H), 6.25 (t, J = 4.1 Hz, 1H), 5.08 (s, 1H), 1.45 (s,
6H).

Example 27

30

Synthesis of 7-fluoro-3-[4-(1-hydroxy-cyclopentyl)-phenyl]-2H-pyrrolo[1,2-
a]pyrazin-1-one ("A85")

35

A 25 ml round-bottom flask is flushed with nitrogen and charged with 6.9 ml dry THF, 134 mg (5.50 mmol) magnesium turnings and 49 mg (0.20 mmol) cerium(III) chloride. Under stirring, the suspension is cooled to 0° C. Then 378 μ l (3.20 mmol) 1,4-dibromobutane is added, the suspension is allowed to reach room temperature, stirred for 30 minutes at this temperature and again cooled to 0° C. Then, a solution of 286 mg (1.00 mmol) 4-(7-fluoro-1-oxo-1,2-dihydro-pyrrolo[1,2-a]pyrazin-3-yl)-benzoic acid methyl ester in 2.3 ml THF is added dropwise. The reaction mixture is stirred for 30 minutes at 0° C and for 1 hour at room temperature. The reaction mixture is quenched with saturated ammonium chloride solution. To a suspension of 5.73 g (20.0 mmol) 4-(7-fluoro-1-oxo-1,2-dihydro-pyrrolo[1,2-a]pyrazin-3-yl)-benzoic acid methyl ester in 85 ml THF are added 5.42 g (22.0 mmol) and the mixture is stirred for 1 h at ambient temperature under nitrogen. Then 30.5 ml (84.0 mmol) of a 20% solution of methylmagnesium chloride in THF is added dropwise and the reaction mixture is stirred for 30 minutes at room temperature. The reaction mixture is partitioned between ethyl acetate and water. The organic phase is dried over sodium sulfate and evaporated. The residue is chromatographed on a silica gel column with cyclohexane/ethyl acetate as eluent to afford 7-fluoro-3-[4-(1-hydroxy-cyclopentyl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one as light orange powder; HPLC/MS 2.37 (B), [M+H] 313; ¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 10.99 (s, 1H), 7.62 (s, 1H), 7.59 (d, *J* = 8.5 Hz, 2H), 7.54 (d, *J* = 8.5 Hz, 2H), 7.48 (dd, *J* = 3.4, 1.9 Hz, 1H), 6.75 (d, *J* = 1.8 Hz, 1H), 4.85 (s, 1H), 1.92 – 1.80 (m, 6H), 1.80 – 1.69 (m, 2H).

Example 28

Synthesis of 3-[4-(3-hydroxy-azetidin-3-yl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one hydrochloride ("A86")

15 HPLC/MS 1.13 (A), [M+H]⁺ 282; ¹H NMR (400 MHz, DMSO-d₆) δ [ppm] 10.83 (s, 1H), 9.24 (s, 2H), 7.82 (s, 1H), 7.78 – 7.73 (m, 2H), 7.70 – 7.62 (m, 2H), 7.48 (dd, J = 2.5, 1.5 Hz, 1H), 6.93 (dd, J = 3.9, 1.3 Hz, 1H), 6.78 (s, 1H), 6.59 (dd, J = 3.9, 2.5 Hz, 1H), 4.34 (d, J = 11.7 Hz, 2H), 4.11 (d, J = 11.7 Hz, 2H).

20

Example 29

Synthesis of 3-[4-(1-hydroxy-1-methyl-ethyl)phenyl]-6-methyl-2H-pyrrolo[1,2-a]pyrazin-1-one ("A87")

25

35

The reaction is carried out according to Y. Fujiwara et al, J. Am. Chem. Soc. 2012, 134, 1494-1497.

Example 30

5
Synthesis of 7-chloro-3-[4-(1,3-dihydroxy-1-methyl-propyl)phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one ("A88")

10

The compounds shown in Table 1 are particularly preferred compounds according to the invention.

15

20

The following examples relate to medicaments:

Example A: Injection vials

25

A solution of 100 g of an active ingredient of the formula I and 5 g of disodium hydrogenphosphate in 3 l of bidistilled water is adjusted to pH 6.5 using 2 N hydrochloric acid, sterile filtered, transferred into injection vials, lyophilised under sterile conditions and sealed under sterile conditions. Each injection vial contains 5 mg of active ingredient.

30

Example B: Suppositories

A mixture of 20 g of an active ingredient of the formula I with 100 g of soya lecithin and 1400 g of cocoa butter is melted, poured into moulds and allowed to cool. Each suppository contains 20 mg of active ingredient.

35

Example C: Solution

5 A solution is prepared from 1 g of an active ingredient of the formula I, 9.38 g of $\text{NaH}_2\text{PO}_4 \cdot 2 \text{H}_2\text{O}$, 28.48 g of $\text{Na}_2\text{HPO}_4 \cdot 12 \text{H}_2\text{O}$ and 0.1 g of benzalkonium chloride in 940 ml of bidistilled water. The pH is adjusted to 6.8, and the solution is made up to 1 l and sterilised by irradiation. This solution can be used in the form of eye drops.

Example D: Ointment

10 500 mg of an active ingredient of the formula I are mixed with 99.5 g of Vaseline under aseptic conditions.

Example E: Tablets

15 A mixture of 1 kg of active ingredient of the formula I, 4 kg of lactose, 1.2 kg of potato starch, 0.2 kg of talc and 0.1 kg of magnesium stearate is pressed in a conventional manner to give tablets in such a way that each tablet contains 10 mg of active ingredient.

Example F: Dragees

20 Tablets are pressed analogously to Example E and subsequently coated in a conventional manner with a coating of sucrose, potato starch, talc, tragacanth and dye.

Example G: Capsules

25 2 kg of active ingredient of the formula I are introduced into hard gelatine capsules in a conventional manner in such a way that each capsule contains 30 20 mg of the active ingredient.

Example H: Ampoules

35 A solution of 1 kg of active ingredient of the formula I in 60 l of bidistilled water is sterile filtered, transferred into ampoules, lyophilised under sterile conditions

and sealed under sterile conditions. Each ampoule contains 10 mg of active ingredient.

Patent Claims

1. Compounds of the formula I

5

in which

10

R^1 denotes H, F, Cl, CN, CH₃, CH₂OH, CH₂Cl, CH₂Br, CF₃, CHF₂ or CH₂F,

R^2 denotes H or A,

15

R^3 denotes H, F, Cl, CH₃, CF₃ or CHF₂,

X denotes CR³ or N,

Y denotes Ar¹, Carb, Het¹ or Cyc,

20

Ar¹ denotes phenyl or naphthyl, which is unsubstituted or mono-, di- or trisubstituted by Hal, A, [C(R²)₂]_pOR², [C(R²)₂]_pN(R²)₂, [C(R²)₂]_pHet², NO₂, CN, [C(R²)₂]_pCOOR², [C(R²)₂]_pCON(R²)₂, NR²COA, NR²SO₂A, [C(R²)₂]_pSO₂N(R²)₂, S(O)_nA, COHet³, O[C(R²)₂]_mN(R²)₂, O[C(R²)₂]_pAr², O[C(R²)₂]_pHet², NHCOOA, NHCON(R²)₂, Cyc, CHO and/or COA,

25

Ar² denotes phenyl, which is unsubstituted or mono- or disubstituted by Hal, A, [C(R²)₂]_pOR², [C(R²)₂]_pN(R²)₂, [C(R²)₂]_pHet³, NO₂, CN, [C(R²)₂]_pCOOR, [C(R²)₂]_pN(R²)₂, N(R²)₂COA, NR²SO₂A, [C(R²)₂]_pSO₂N(R²)₂, S(O)_nA, COHet³, O[C(R²)₂]_mN(R²)₂, O[C(R²)₂]_pHet³, NHCOOA, NHCON(R²)₂, CHO and/or COA,

30

Het¹ denotes pyrrolidinyl, azetidiny, tetrahydroimidazolyl, tetrahydrofuranyl, tetrahydropyrazolyl, tetrahydropyranlyl, piperidinyl, morpholinyl, hexahydropyridazinyl, hexahydro-pyrimidinyl, [1,3]dioxolanyl, piperazinyl, furyl, thienyl, pyrrolyl,

35

- imidazolyl, pyrazolyl, oxazolyl, isoxazolyl, oxadiazolyl, thiazolyl, triazolyl, tetrazolyl, pyridyl, pyrimidyl, pyridazinyl, indolyl, isoindolyl, benzimidazolyl, indazolyl, quinolyl, 1,3-benzodioxolyl, benzothiophenyl, benzofuranyl, imidazopyridyl or furo[3,2-
 5 b]pyridyl, each of which is unsubstituted or mono- or disubstituted by Hal, A, $[C(R^2)_2]_pOR^2$, $[C(R^2)_2]_pN(R^2)_2$, $[C(R^2)_2]_pHet^2$, $[C(R^2)_2]_pAr^2$, NO_2 , CN, $[C(R^2)_2]_pCOOR^2$, $[C(R^2)_2]_pCON(R^2)_2$, NR^2COA , NR^2SO_2A , $[C(R^2)_2]_pSO_2N(R^2)_2$, $S(O)_nA$, $COHet^3$, $O[C(R^2)_2]_mN(R^2)_2$, $O[C(R^2)_2]_pAr^2$, $O[C(R^2)_2]_pHet^2$, $NHCOOA$, $NHCON(R^2)_2$, CHO, COA, =S, =NR and/or =O,
- 10 Carb denotes indanyl or tetrahydronaphthyl, each of which may be unsubstituted or mono-, di-, tri- or tetrasubstituted by A,
- 15 Cyc denotes cyclic alkyl with 3, 4, 5, 6 or 7 C-atoms, which may be unsubstituted or monosubstituted by A, OH, Hal, CN or Ar^2 or Het^2 ,
- 20 Het^2 denotes pyrrolidinyl, azetidiny, tetrahydroimidazolyl, tetrahydrofuranyl, tetrahydropyrazolyl, tetrahydropyranyl, piperidinyl, morpholinyl, hexahydropyridazinyl, hexahydro-
 25 pyrimidinyl, [1,3]dioxolanyl, piperazinyl, furyl, thienyl, pyrrolyl, imidazolyl, pyrazolyl, oxazolyl, isoxazolyl, oxadiazolyl, thiazolyl, triazolyl, tetrazolyl, pyridyl, pyrimidyl, pyridazinyl, indolyl, isoindolyl, benzimidazolyl, indazolyl, quinolyl, 1,3-benzodioxolyl, benzothiophenyl, benzofuranyl, imidazopyridyl or furo[3,2-
 30 b]pyridyl, each of which is unsubstituted or mono- or disubstituted by Hal, A, $[C(R^2)_2]_pOR^2$, $[C(R^2)_2]_pN(R^2)_2$, $[C(R^2)_2]_pHet^3$, $[C(R^2)_2]_pOHet^3$, $[C(R^2)_2]_pAr^2$, NO_2 , CN, $[C(R^2)_2]_pCOOR^2$, $[C(R^2)_2]_pCON(R^2)_2$, NR^2COA , NR^2SO_2A , $[C(R^2)_2]_pSO_2N(R^2)_2$, $S(O)_nA$, $COHet^3$, $O[C(R^2)_2]_mN(R^2)_2$, $O[C(R^2)_2]_pAr^2$, $O[C(R^2)_2]_pHet^3$, $NHCOOA$, $NHCON(R^2)_2$, CHO, COA, =S, =NR and/or =O,
- 35

- 5 Het³ denotes dihydropyrrolyl, pyrrolidinyl, azetidiny, oxetanyl, tetra-
hydroimidazolyl, dihydropyrazolyl, tetrahydropyrazolyl,
tetrahydrofuranyl, dihydropyridyl, tetrahydropyridyl, piperidinyl,
morpholinyl, hexahydropyridazinyl, hexahydropyrimidinyl,
[1,3]dioxolanyl, tetrahydropyranyl or piperazinyl, each of which is
unsubstituted or mono- or disubstituted by Hal, CN, OR²,
COOR², CON(R²)₂, S(O)_nA, S(O)_nAr, COA, A and/or =O,
- 10 A denotes unbranched or branched alkyl with 1-10 C-atoms,
wherein two adjacent CH- and/or CH₂-groups may form a double
bond and wherein one or two non-adjacent CH- and/or CH₂-
groups may be replaced by N-, O- and/or S-atoms and wherein
1-7 H-atoms may be replaced by F or Cl,
- 15 Hal denotes F, Cl, Br or I,
- n denotes 0, 1 or 2,
- m denotes 1, 2 or 3,
- 20 p denotes 0, 1, 2, 3 or 4,

with the proviso that, if R¹ is CH₂OH, then Ar¹ is not 2,4-dichlorophenyl,

25 and pharmaceutically acceptable solvates, salts, tautomers and
stereoisomers thereof, including mixtures thereof in all ratios.

2. Compounds according to Claim 1 in which
- 30 Ar¹ denotes phenyl, which is unsubstituted or mono-, di- or
trisubstituted by Hal, A, [C(R²)₂]_pOR², [C(R²)₂]_pN(R²)₂,
[C(R²)₂]_pHet², NO₂, Cyc, [C(R²)₂]_pCOOR², O[C(R²)₂]_pAr² and/or
O[C(R²)₂]_pHet²,
- 35 and pharmaceutically acceptable solvates, salts, tautomers and
stereoisomers thereof, including mixtures thereof in all ratios.

3. Compounds according to Claim 1 or 2 in which
Ar² denotes phenyl, which is unsubstituted or monosubstituted by
[C(R²)₂]_pOR²,
and pharmaceutically acceptable solvates, salts, tautomers and
stereoisomers thereof, including mixtures thereof in all ratios.
4. Compounds according to one or more of Claims 1-3 in which
Het¹ denotes pyrrolidinyl, azetidiny, tetrahydroimidazolyl,
tetrahydrofuranyl, tetrahydropyrazolyl, tetrahydropyranyl,
piperidinyl, morpholinyl, hexahydropyridazinyl, hexahydro-
pyrimidinyl, [1,3]dioxolanyl, piperazinyl, furyl, thienyl, pyrrolyl,
imidazolyl, pyrazolyl, oxazolyl, isoxazolyl, oxadiazolyl, thiazolyl,
triazolyl, tetrazolyl, pyridyl, pyrimidyl, pyridazinyl, indolyl,
isoindolyl, benzimidazolyl, indazolyl, quinolyl, 1,3-benzodioxolyl,
benzothiophenyl, benzofuranyl, imidazopyridyl or furo[3,2-
b]pyridyl, each of which is unsubstituted or mono- or
disubstituted by A, [C(R²)₂]_pOR², [C(R²)₂]_pHet² and/or
[C(R²)₂]_pAr²,
and pharmaceutically acceptable solvates, salts, tautomers and
stereoisomers thereof, including mixtures thereof in all ratios.
5. Compounds according to one or more of Claims 1-4 in which
Het² denotes pyrrolidinyl, azetidiny, tetrahydroimidazolyl,
tetrahydrofuranyl, tetrahydropyrazolyl, tetrahydropyranyl,
piperidinyl, morpholinyl, hexahydropyridazinyl, hexahydro-
pyrimidinyl, [1,3]dioxolanyl, piperazinyl, furyl, thienyl, pyrrolyl,
imidazolyl, pyrazolyl, oxazolyl, isoxazolyl, oxadiazolyl, thiazolyl,
triazolyl, tetrazolyl, pyridyl, pyrimidyl, pyridazinyl, indolyl,
isoindolyl, benzimidazolyl, indazolyl, quinolyl, 1,3-benzodioxolyl,
benzothiophenyl, benzofuranyl, imidazopyridyl or furo[3,2-
b]pyridyl, each of which is unsubstituted or mono- or

disubstituted by A, $[C(R^2)_2]_pOR^2$, $[C(R^2)_2]_pHet^3$ and/or $[C(R^2)_2]_pOHet^3$,

and pharmaceutically acceptable solvates, salts, tautomers and stereoisomers thereof, including mixtures thereof in all ratios.

- 5 6. Compounds according to one or more of Claims 1-4 in which Het^3 denotes dihydropyrrolyl, pyrrolidinyl, azetidiny, oxetanyl, tetrahydroimidazolyl, dihydropyrazolyl, tetrahydropyrazolyl, tetrahydrofuranyl, dihydropyridyl, tetrahydropyridyl, piperidinyl, morpholinyl, hexahydropyridazinyl, hexahydropyrimidinyl, [1,3]dioxolanyl, tetrahydropyranyl or piperazinyl, and pharmaceutically acceptable solvates, salts, tautomers and stereoisomers thereof, including mixtures thereof in all ratios.

- 15 7. Compounds according to one or more of Claims 1-6 in which in which

R^1 denotes H, F, Cl, CN, CH_3 , CH_2OH , CH_2Cl , CH_2Br , CF_3 , CHF_2 or CH_2F ,

R^2 denotes H or A,

R^3 denotes H, F, Cl, CH_3 , CF_3 or CHF_2 ,

X denotes CR^3 or N,

25 Y denotes Ar^1 , Carb, Het^1 or Cyc,

Ar^1 denotes phenyl, which is unsubstituted or mono-, di- or trisubstituted by Hal, A, $[C(R^2)_2]_pOR^2$, $[C(R^2)_2]_pN(R^2)_2$, $[C(R^2)_2]_pHet^2$, NO_2 , Cyc, $[C(R^2)_2]_pCOOR^2$, $O[C(R^2)_2]_pAr^2$ and/or $O[C(R^2)_2]_pHet^2$,

Ar^2 denotes phenyl, which is unsubstituted or monosubstituted by $[C(R^2)_2]_pOR^2$,

35 Het^1 denotes pyrrolidinyl, azetidiny, tetrahydroimidazolyl, tetrahydrofuranyl, tetrahydropyrazolyl, tetrahydropyranyl, piperidinyl, morpholinyl, hexahydropyridazinyl, hexahydro-

- pyrimidinyl, [1,3]dioxolanyl, piperazinyl, furyl, thienyl, pyrrolyl, imidazolyl, pyrazolyl, oxazolyl, isoxazolyl, oxadiazolyl, thiazolyl, triazolyl, tetrazolyl, pyridyl, pyrimidyl, pyridazinyl, indolyl, isoindolyl, benzimidazolyl, indazolyl, quinolyl, 1,3-benzodioxolyl, benzothiophenyl, benzofuranyl, imidazopyridyl or furo[3,2-b]pyridyl, each of which is unsubstituted or mono- or disubstituted by A, $[C(R^2)_2]_pOR^2$, $[C(R^2)_2]_pHet^2$ and/or $[C(R^2)_2]_pAr^2$,
- 5
- 10 Carb denotes indanyl or tetrahydronaphthyl, each of which may be unsubstituted or mono-, di-, tri- or tetrasubstituted by A,
- Cyc denotes cyclic alkyl with 3, 4, 5, 6 or 7 C-atoms, which may be unsubstituted or monosubstituted by A, OH, Hal, CN or Ar^2 or
- 15 Het^2 ,
 Het^2 denotes pyrrolidinyl, azetidiny, tetrahydroimidazolyl, tetrahydrofuranyl, tetrahydropyrazolyl, tetrahydropyranyl, piperidinyl, morpholinyl, hexahydropyridazinyl, hexahydro-
- 20 pyrimidinyl, [1,3]dioxolanyl, piperazinyl, furyl, thienyl, pyrrolyl, imidazolyl, pyrazolyl, oxazolyl, isoxazolyl, oxadiazolyl, thiazolyl, triazolyl, tetrazolyl, pyridyl, pyrimidyl, pyridazinyl, indolyl, isoindolyl, benzimidazolyl, indazolyl, quinolyl, 1,3-benzodioxolyl, benzothiophenyl, benzofuranyl, imidazopyridyl or furo[3,2-
- 25 b]pyridyl, each of which is unsubstituted or mono- or disubstituted by A, $[C(R^2)_2]_pOR^2$, $[C(R^2)_2]_pHet^3$ and/or $[C(R^2)_2]_pOHet^3$,
- 30 Het^3 denotes dihydropyrrolyl, pyrrolidinyl, azetidiny, oxetanyl, tetrahydroimidazolyl, dihydropyrazolyl, tetrahydropyrazolyl, tetrahydrofuranyl, dihydropyridyl, tetrahydropyridyl, piperidinyl, morpholinyl, hexahydropyridazinyl, hexahydropyrimidinyl, [1,3]dioxolanyl, tetrahydropyranyl or piperazinyl,
- 35 A denotes unbranched or branched alkyl with 1-10 C-atoms, wherein two adjacent CH- and/or CH_2 -groups may form a double

bond and wherein one or two non-adjacent CH- and/or CH₂- groups may be replaced by N-, O- and/or S-atoms and wherein 1-7 H-atoms may be replaced by F or Cl,

5 Hal denotes F, Cl, Br or I,
 p denotes 0, 1, 2, 3 or 4,
 with the proviso that, if R¹ is CH₂OH, then Ar¹ is not 2,4-dichlorophenyl,

10 and pharmaceutically acceptable solvates, salts, tautomers and stereoisomers thereof, including mixtures thereof in all ratios.

8. Compounds according to one or more of Claims 1-7 in which in which

15 R¹ denotes H, F, Cl, CN, CH₃, CH₂OH, CH₂Cl, CH₂Br, CF₃, CHF₂ or CH₂F,

R² denotes H or A,

20 R³ denotes H, F, Cl, CH₃, CF₃ or CHF₂,

X denotes CR³ or N,

Y denotes Ar¹, Carb, Het¹ or Cyc,

25 Ar¹ denotes phenyl, which is unsubstituted or mono-, di- or trisubstituted by Hal, A, [C(R²)₂]_pOR², [C(R²)₂]_pN(R²)₂, [C(R²)₂]_pHet², NO₂, Cyc, [C(R²)₂]_pCOOR², O[C(R²)₂]_pAr² and/or O[C(R²)₂]_pHet²,

30 Ar² denotes phenyl, which is unsubstituted or monosubstituted by [C(R²)₂]_pOR²,

35 Het¹ denotes pyrrolidiny, piperidiny, morpholiny, pyrazoly, pyridyl, pyrimidyl or 1,3-benzodioxoly, each of which is unsubstituted or mono- or disubstituted by A, [C(R²)₂]_pOR², [C(R²)₂]_pHet² and/or [C(R²)₂]_pAr²,

- Carb denotes indanyl or tetrahydronaphthyl, each of which may be unsubstituted or mono-, di-, tri- or tetrasubstituted by A,
- Cyc denotes cyclic alkyl with 3, 4, 5, 6 or 7 C-atoms, which may be unsubstituted or monosubstituted by A, OH, Hal, CN or Ar² or Het²,
- Het² denotes pyrrolidinyl, piperidinyl, morpholinyl, pyrazolyl, oxazolyl, isoxazolyl or oxadiazolyl, each of which is unsubstituted or mono- or disubstituted by A, [C(R²)₂]_pOR², [C(R²)₂]_pHet³ and/or [C(R²)₂]_pOHet³,
- Het³ denotes pyrrolidinyl, piperidinyl, morpholinyl or tetrahydropyranyl,
- A denotes unbranched or branched alkyl with 1-10 C-atoms, wherein two adjacent CH- and/or CH₂-groups may form a double bond and wherein one or two non-adjacent CH- and/or CH₂-groups may be replaced by O-atoms and wherein 1-7 H-atoms may be replaced by F or Cl,
- Hal denotes F, Cl, Br or I,
- p denotes 0, 1, 2, 3 or 4,
- with the proviso that, if R¹ is CH₂OH, then Ar¹ is not 2,4-dichlorophenyl,

and pharmaceutically acceptable solvates, salts, tautomers and stereoisomers thereof, including mixtures thereof in all ratios.

9. Compounds according to Claim 1, selected from the group

No.	Name
"A1"	3-(4-benzyloxy-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one
"A2"	3-phenyl-2H-pyrrolo[1,2-a]pyrazin-1-one
"A3"	3-(3-chloro-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one
"A4"	3-(3-methoxy-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one

5	"A5"	3-(5,5,8,8-tetramethyl-5,6,7,8-tetrahydro-naphthalen-2-yl)-2H-pyrrolo[1,2-a]pyrazin-1-one
	"A6"	3-(4-nitro-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one
	"A7"	3-(4-methoxy-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one
	"A8"	3-(3,4-dimethoxy-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one
	"A9"	3-benzo[1,3]dioxol-5-yl-2H-pyrrolo[1,2-a]pyrazin-1-one
10	"A10"	3-(4-fluoro-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one
	"A11"	3-(4-tert-butyl-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one
	"A12"	3-p-tolyl-2H-pyrrolo[1,2-a]pyrazin-1-one
15	"A13"	3-(4-trifluoromethyl-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one
	"A14"	3-(1-methyl-1H-pyrazol-4-yl)-2H-pyrrolo[1,2-a]pyrazin-1-one
	"A15"	6-(4-tert-butyl-phenyl)-5H-pyrazolo[1,5-a]pyrazin-4-one
	"A16"	6-(4-trifluoromethoxy-phenyl)-5H-pyrazolo[1,5-a]pyrazin-4-one
	"A17"	6-(4-pyrrolidin-1-yl-phenyl)-5H-pyrazolo[1,5-a]pyrazin-4-one
20	"A18"	6-(4-tert-butyl-phenyl)-2-hydroxymethyl-5H-pyrazolo[1,5-a]pyrazin-4-one
	"A19"	2-hydroxymethyl-6-(4-pyrrolidin-1-yl-phenyl)-5H-pyrazolo[1,5-a]pyrazin-4-one
	"A20"	2-hydroxymethyl-6-(4-isopropoxy-phenyl)-5H-pyrazolo[1,5-a]pyrazin-4-one
25	"A21"	2-hydroxymethyl-6-[4-(5-methyl-[1,2,4]oxadiazol-3-yl)-phenyl]-5H-pyrazolo[1,5-a]pyrazin-4-one
	"A22"	2-hydroxymethyl-6-(1-isopropyl-1H-pyrazol-4-yl)-5H-pyrazolo[1,5-a]pyrazin-4-one
	"A23"	6-cyclohexyl-2-hydroxymethyl-5H-pyrazolo[1,5-a]pyrazin-4-one
30	"A24"	3-(4-bromo-phenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one
	"A25"	3-[4-(1-methyl-1H-pyrazol-4-yl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one

"A90"	7-fluoro-3-[4-(1-methyl-1H-pyrazol-4-yl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one
"A91"	7-methyl-3-[4-(1-methyl-1H-pyrazol-4-yl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one
"A92"	3-(4-tert-butyl-phenyl)-1-oxo-1,2-dihydro-pyrrolo[1,2-a]pyrazine-7-carbonitrile
"A93"	7-fluoro-3-phenyl-2H-pyrrolo[1,2-a]pyrazin-1-one
"A94"	3-(4-bromophenyl)-6-methyl-2H-pyrrolo[1,2-a]pyrazin-1-one
"A95"	3-[4-(1-hydroxy-1-methyl-ethyl)phenyl]-6-methyl-2H-pyrrolo[1,2-a]pyrazin-1-one
"A96"	6-(difluoromethyl)-3-[4-(1-hydroxy-1-methyl-ethyl)phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one
"A97"	6-(trifluoromethyl)-3-[4-(1-hydroxy-1-methyl-ethyl)phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one
"A98"	3-[4-(3-hydroxypyrrolidin-3-yl)phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one
"A99"	3-[4-(4-hydroxy-4-piperidyl)phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one
"A100"	3-[4-(3-hydroxy-1-methyl-azetidin-3-yl)phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one
"A101"	3-[4-(3-hydroxy-1-methyl-pyrrolidin-3-yl)phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one
"A102"	3-[4-(4-hydroxy-1-methyl-4-piperidyl)phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one
"A103"	7-fluoro-3-(4-pyrrolidin-3-ylphenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one
"A104"	7-fluoro-3-[4-(1-methylpyrrolidin-3-yl)phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one
"A105"	7-chloro-3-(4-pyrrolidin-3-ylphenyl)-2H-pyrrolo[1,2-a]pyrazin-1-one

"A106"	7-chloro-3-[4-(1-methylpyrrolidin-3-yl)phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one
"A107"	7-chloro-3-[4-(1,3-dihydroxy-1-methyl-propyl)phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one
"A108"	3-[4-(1,3-dihydroxy-1-methyl-propyl)phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one
"A109"	7-fluoro-3-[4-(1,3-dihydroxy-1-methyl-propyl)phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one
"A110"	3-[4-(3-hydroxy-oxetan-3-yl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one
"A111"	3-[4-(1-hydroxy-cyclobutyl)-phenyl]-2H-pyrrolo[1,2-a]pyrazin-1-one

and pharmaceutically acceptable solvates, salts, tautomers and stereoisomers thereof, including mixtures thereof in all ratios.

20

10. Process for the preparation of compounds of the formula I according to Claims 1-9 and pharmaceutically acceptable salts, solvates, tautomers and stereoisomers thereof, characterised in that

a) a compound of the formula II

25

30

in which R¹, X and Y have the meanings indicated in Claim 1, and A' denotes unbranched or branched alkyl with 1, 2, 3 or 4 C-atoms,

35

is reacted with NH₃, NH₄OAc or (NH₄)₂CO₃,

or

b) a compound of the formula III

5

10

in which R¹, X and Y have the meanings indicated in Claim 1,

is cyclised with H₂O₂ under basic conditions,

15

or

c) a radical R¹ and/or Y is converted into another radical R¹ and/or Y by

20

- i) converting COOH or CHO into H,
- ii) converting an ester group into an alcohol group,
- iii) converting in a Suzuki coupling a halogenated phenyl ring into an arylated phenyl ring,
- iv) converting a halogenated alkyl group into an alkyl group,

25

or

30

d) that it is liberated from one of its functional derivatives by treatment with a solvolysing or hydrogenolysing agent,

and/or

a base or acid of the formula I is converted into one of its salts.

35

11. Medicaments comprising at least one compound of the formula I according to claim 1 and/or pharmaceutically acceptable salts, solvates, tautomers and stereoisomers thereof, including mixtures thereof in all ratios, and optionally an pharmaceutically acceptable carrier, excipient or vehicle.
- 5
12. Compounds of the formula I according to claim 1 and pharmaceutically acceptable salts, solvates, tautomers and stereoisomers thereof, including mixtures thereof in all ratios, for the use for the treatment and/or prevention of cancer, multiple sclerosis, cardiovascular diseases, central nervous system injury and different forms of inflammation.
- 10
13. Compounds according to claim 12 for the use for the treatment and/or prevention of diseases selected from the group cancer of head, neck, eye, mouth, throat, esophagus, bronchus, larynx, pharynx, chest, bone, lung, colon, rectum, stomach, prostate, urinary bladder, uterine, cervix, breast, ovaries, testicles or other reproductive organs, skin, thyroid, blood, lymph nodes, kidney, liver, pancreas, brain, central nervous system, solid tumors and blood-borne tumors.
- 15
14. Medicaments comprising at least one compound of the formula I according to claim 1 and/or pharmaceutically acceptable salts, solvates and stereoisomers thereof, including mixtures thereof in all ratios, and at least one further medicament active ingredient.
- 20
15. Set (kit) consisting of separate packs of
- 25
- (a) an effective amount of a compound of the formula I according to claim 1 and/or pharmaceutically acceptable salts, solvates, salts and stereoisomers thereof, including mixtures thereof in all ratios,
- and
- (b) an effective amount of a further medicament active ingredient.
- 30
