

CONNECTION ASSEMBLY

Abstract

- 5 A connection assembly having a nut and a first-snap-fit-engagement-arrangement. The connection assembly further has a first body with a first lug having a second-snap-fit-engagement-arrangement. The nut is coupled to the first lug with the nut, in a manner so as to engage the first-snap-fit-engagement-arrangement with the second-snap-fit-engagement-arrangement such that the nut is non-movable relative to the first lug. The
- 10 connection assembly further has a second body with a second lug. The second lug is placed over the first lug and a bolt is inserted through respective through-holes of the first lug and the second lug and threaded through a threaded hole of the nut.
