

PROCESSING METHOD OF WORKPIECE

ABSTRACT

A processing method of a workpiece includes an integration step of heating and compression bonding a thermocompression bonding sheet to an annular frame that has an opening to receive the workpiece therein and to the workpiece received in the opening, whereby the annular frame and the workpiece are integrated via the thermocompression bonding sheet, and a processing step of processing the workpiece integrated with the annular frame via the thermocompression bonding sheet. In the integration step, the thermocompression bonding sheet is pressed against the annular frame that has been heated by a heat table with a heat source included therein, by a heat roller with a heat source included therein while being heated by the heat roller, whereby the thermocompression bonding sheet is fixed to the annular frame.
