(54) Title: NOVEL SUBSTITUTED PYRIDINO ARYLPIPERAZINES USEFUL IN THE TREATMENT OF BENIGN PROSTATIC HYPERPLASIA

(I)

(57) Abstract

This invention relates to a series of heterocyclic substituted piperazines of Formula (I), methods of treatment, pharmaceutical compositions containing them, and intermediates used in their manufacture. The compounds of the invention selectively inhibit binding to the α-1_a adrenergic receptor, a receptor which has been implicated in benign prostatic hyperplasia. As such the compounds are potentially useful in the treatment of this disease.
