CLEANING STRATEGY GENERATION METHOD AND APPARATUS, STORAGE MEDIUM, AND ELECTRONIC DEVICE

ABSTRACT

Disclosed are a cleaning strategy generation method and apparatus, a storage medium, and an electronic device. The method includes: first determining information of a contaminant based on environmental data of a target environment, where the information of the contaminant includes a type of the contaminant; subsequently, determining risk information of the contaminant in a preset dimension based on the type of the contaminant; further determining a contamination level of the contaminant based on the risk information of the contaminant in the preset dimension; and finally generating a cleaning strategy for the contaminant based on the information of the contaminant, the risk information of the contaminant in the preset dimension, and the contamination level of the contaminant.
