

Abstract of the Disclosure**APPARATUS AND METHOD FOR RECORDING/REPRODUCING
MOVING PICTURE AND RECORDING MEDIUM**

An apparatus and method of recording/reproducing a moving picture,
5 and a recording medium are provided. The state information on the first
audio represents an original audio state in which the first audio is original
audio, or a secondary audio state in which the first audio is secondary audio
recorded over part or all of the original audio. The state information on the
second audio represents a state in which the second audio is original audio,
10 a state in which the second audio is secondary audio recorded over part or
all of the original audio, a state in which the second audio is dummy audio
which is exactly the same as the first audio, or a state in which the second
audio is secondary audio recorded over part or all of the dummy audio.
Accordingly, audio state information related to a moving image, obtained
15 through recording/overwriting/editing, is stored in a recording unit information
VOBI for a corresponding recording unit VOB, and reported to a user before
the moving image is reproduced, so that the user can recognize the audio
state. Also, during reproduction, the user can appropriately cope with audio
change.
