

【Abstract】

A fuel supply system according to the present invention comprises: a fuel tank in which fuel gas is stored, the fuel tank being capable of accommodating the boil-off gas of the fuel gas and purge gas that can be used
5 for a purging operation; a fuel supply line for supplying fuel from the fuel tank to an engine; a purging gas generation part for generating purging gas suitable for use in the purging operation by using a mixed gas of the boil-off gas and the purge gas accommodated in the fuel tank; a purging line for purging the engine and a pipe with the purging gas generated by the purging gas
10 generation part; and a recovery line connected to the purging line so that the purging gas used for the purging operation is recovered in the fuel tank.
