COMMUNICATION METHOD AND APPARATUS, AND STORAGE MEDIUM

ABSTRACT

Embodiments of this application provide a communication method and apparatus, and a storage medium. The method includes: A network device sends, to a terminal device, information indicating an area or a beam for the terminal device to perform measurement, and/or cell reselection, and/or handover, so that the terminal device can determine, based on an area in which the terminal device is located and the information indicating the area or the beam for the terminal device to perform measurement, and/or cell reselection, and/or handover, whether the terminal device needs to perform measurement, and/or cell reselection, and/or handover when the terminal device is in different areas.
