

Abstract

An arrangement for providing a stamp element (1) which, when it is used, is intended to leave a pattern in an imprinting mass (10) comprising:

- 5 - a profile element (4) which, when the stamp element (1) is used, acts on the imprinting mass (10), the profile element (4) preferably being designed in the shape of a soft stamp, and
- a support element (3) which supports the profile element (4) and, in particular, serves as a counter bearing when the stamp element (3) is used,
- 10 with the profile element (4) and the support element (3) being arranged on and/or at a carrier substrate (2) for transportation.
