(54) Title: OPERATIONAL INTELLIGENCE PLATFORM

FIGURE 5

(57) Abstract: Approaches for monitoring and managing one or more operational components of a data center are provided. Data for one or more applications associated with operational functionalities may be received. The one or more applications may be associated with one or more related applications. A failure of one or more components monitored by the one or more applications or the one or more related applications can be detected. A cause of the failure can be determined based, at least in part, upon detected changes and contextual information associated with the failure. At least one change can be made to the components based on the determined cause.
