

[Name of Document] Abstract

[Abstract]

[Subject] Making a contactless identification system and an antenna coil capable of reliable transmission with multiple tags.

[Means to solve the subject] Create a contactless identification system square shaped antenna coil (10) around the opening (13) at the center, and transfer the antenna section from above the piled books (40) attached with tags (30), so that the books (40) pass through the opening (13), realizing transmission between the antenna coil (10) and each of the tags (30).
