

COMPOSITION FOR INHIBITING SEBUM SECRETION COMPRISING PEACH SPROUT
EXTRACT

Abstract

Disclosed herein are a composition for inhibiting sebum secretion comprising peach sprout extract as an active ingredient, and a composition for inhibiting sebum secretion comprising a mixed extract of peach sprout and peony as an active ingredient. The extract can inhibit an overproduction of sebum and regulates secretion of sebum, thereby not only imparting elasticity to the pores but also suppressing the aging of the pores and exhibiting a pore-contraction effect.
