

ABSTRACT

COMPOSITE-TYPE SOLID WATER TREATMENT PRODUCT

There is provided a composite-type solid water treatment product in which a halogen-based oxidant and an active substance that is reactive to the halogen-based oxidant are safely used, which can continue an excellent effect of a chemical by using these active substances together, and which is also excellent in convenience of handling. The composite-type solid water treatment product to be used by being dissolved into water to be treated contains a solid agent (A) of a halogen-based oxidant containing a halogenated hydantoin-based compound as an active substance and a solid agent (B) containing an organic bactericide that is reactive to the halogen-based oxidant, the solid agent (A) and the solid agent (B) each being stored in a dissolution container without being in contact with each other.
