ABSTRACT

"Method and system for the maintenance of vehicles, installation implementing such a method and system"

The invention relates to a method (200) for the maintenance of vehicles offered for shared use over a plurality of sites, said method comprising at least one iteration of the following steps:

- reporting (204) at least one data, relating to a condition of said vehicle or a component of said vehicle;
- determining (208), as a function of said at least one status data, at least one vehicle status parameter, associated with said vehicle;

said method (200) also comprising at least one iteration of a phase (212), called work phase, comprising the following steps:

- selecting (216) at least one site, as a function of the vehicle status parameters at least of the vehicles present on said at least one site;
- carrying out (218) a maintenance operation on at least one vehicle at said selected site.
